PMC Managers ? Consortium bidding
Complete life cycle (demo walkthrough)

Tender criteria ? forming the team ? agreement ? sealed bid ? automatic qualification ? result notices ? award ? escrow split ? payments

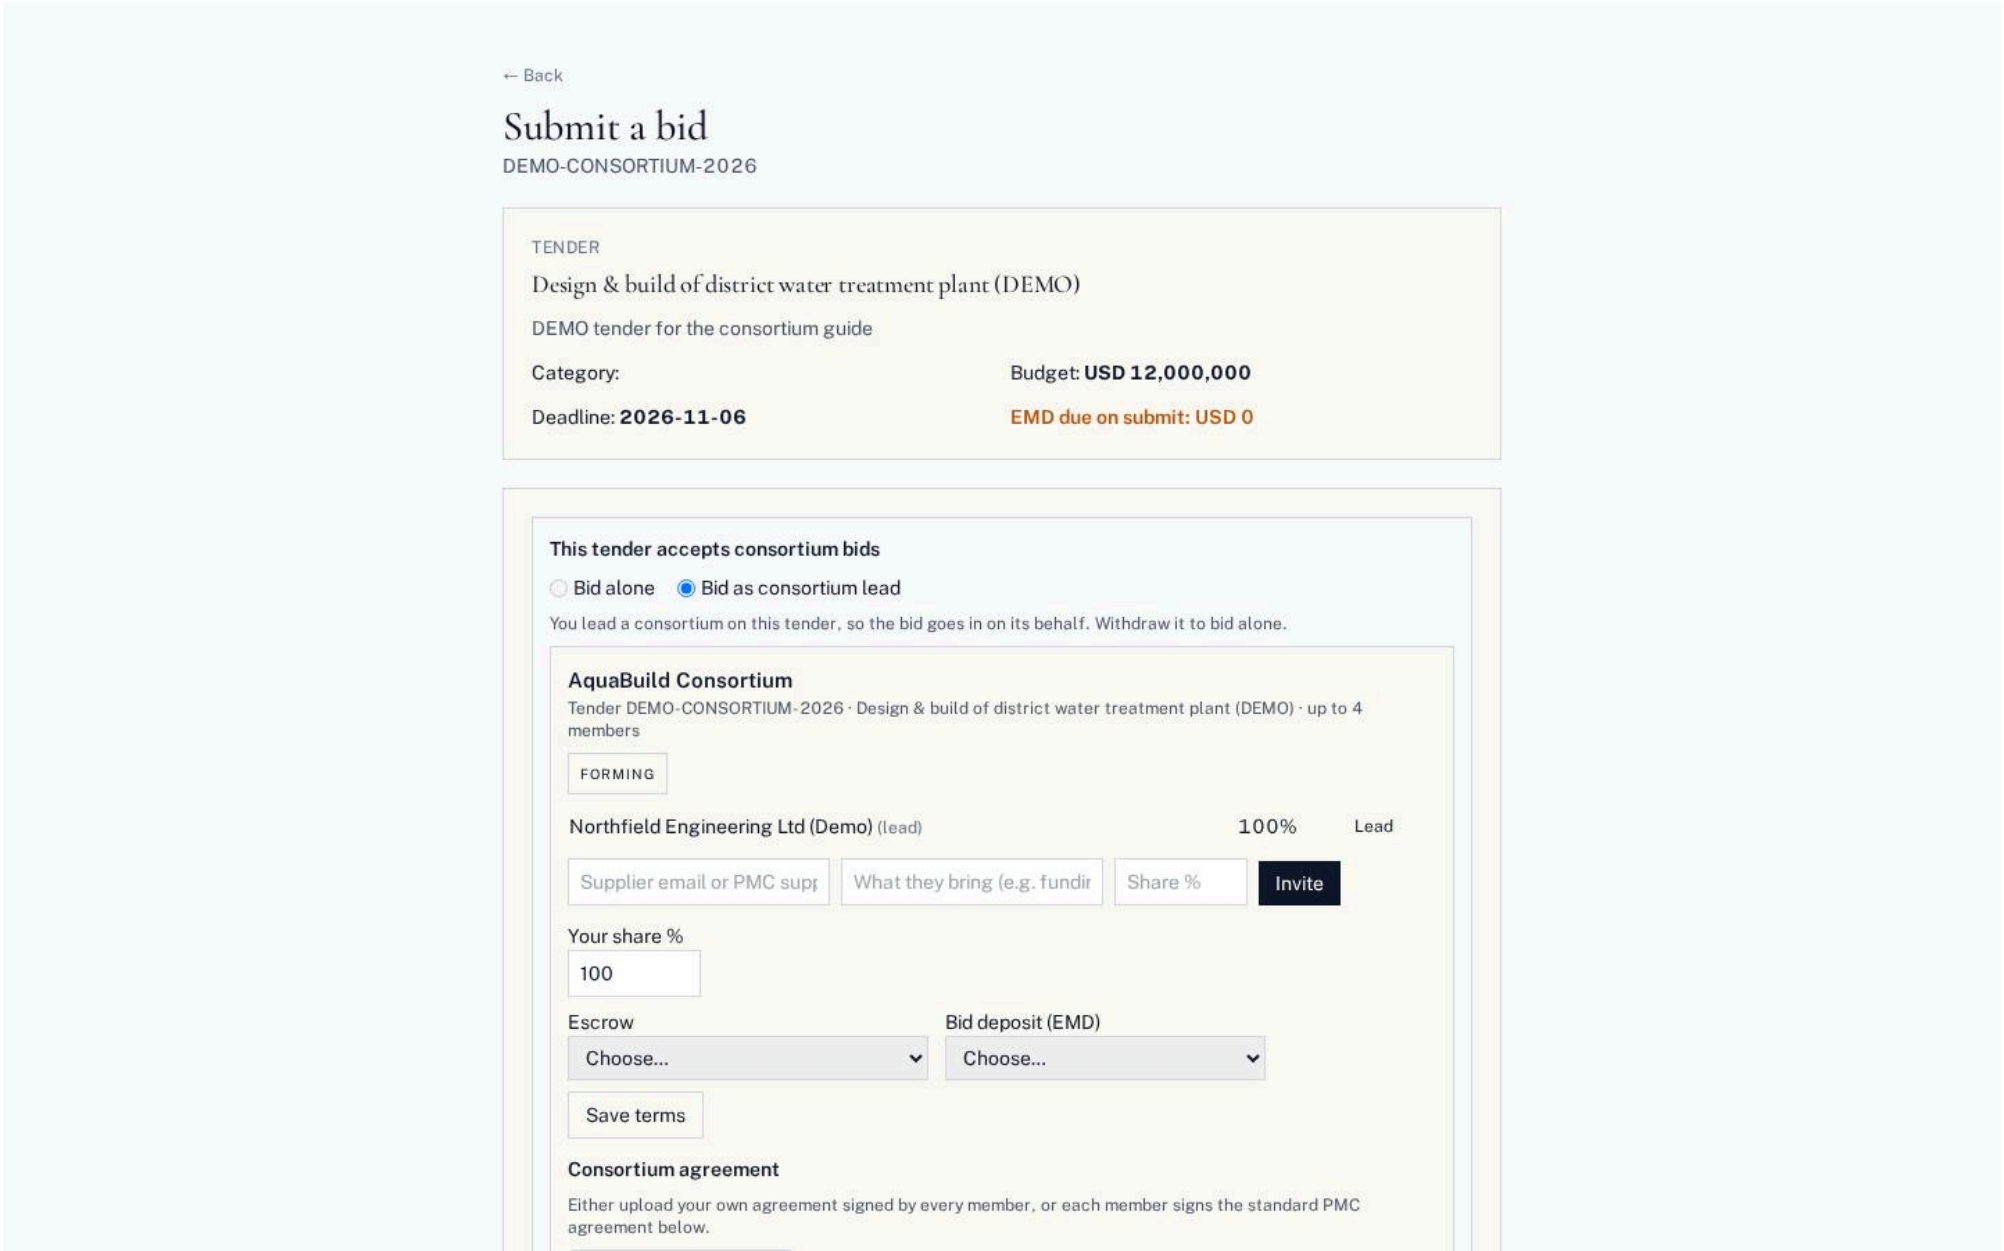

1. Buyer sets the criteria and allows consortium bids

When the tender is created, admin (or the supplier preparing the tender) sets pass/fail and scored criteria. Each criterion says who must meet it in a consortium: the lead alone, all members combined, or every member. 'Accept consortium bids' is ticked and the member limit is set (platform default 5, here 4). Once the tender is live the criteria are locked.

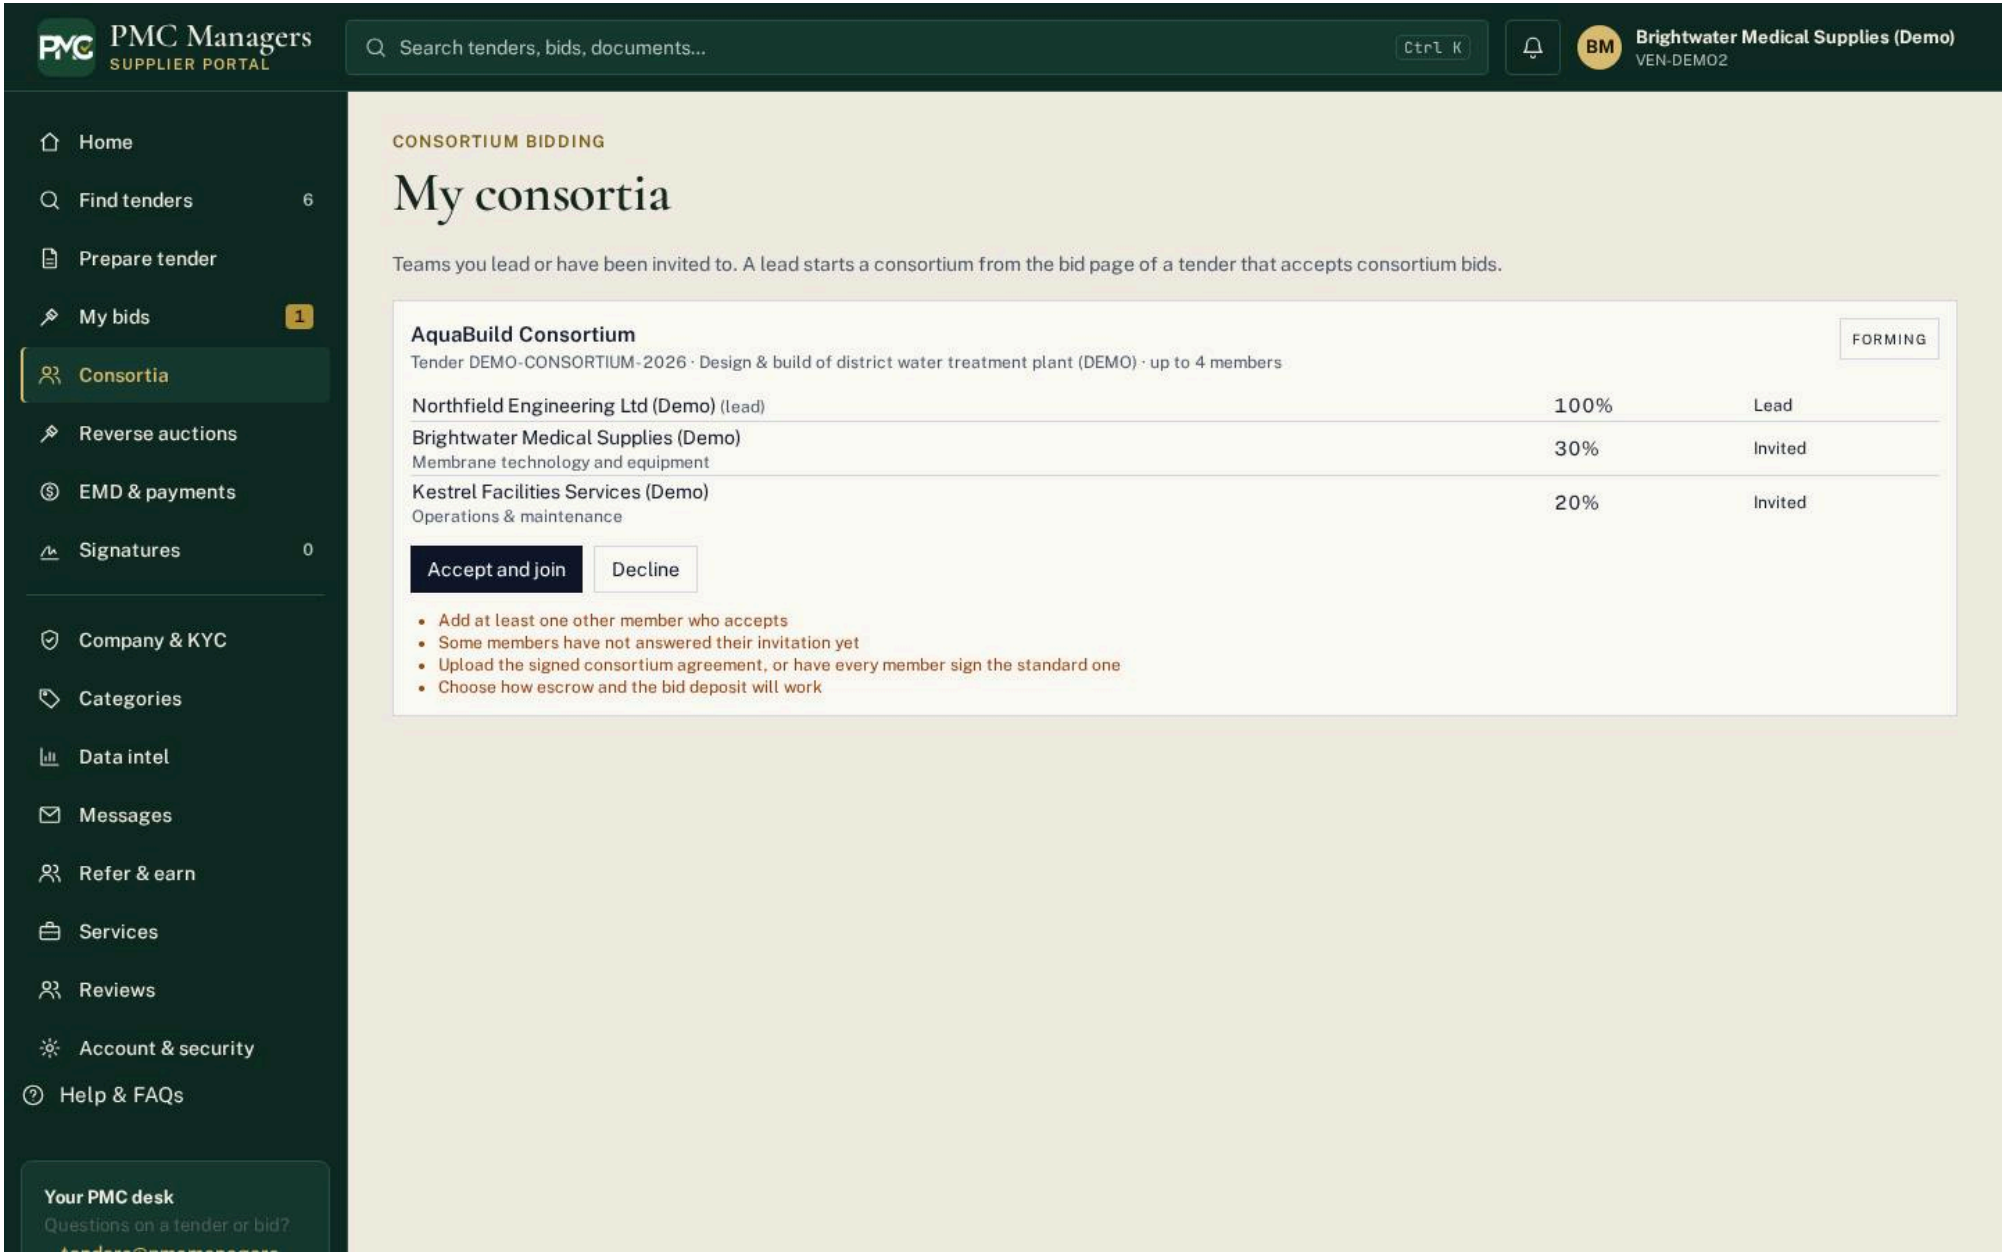

2. The lead supplier forms the consortium

Northfield opens the bid page, chooses 'Bid as consortium lead' and names the team. The lead then invites registered, KYC-verified PMC suppliers by email or supplier ID, with what each brings and their share.

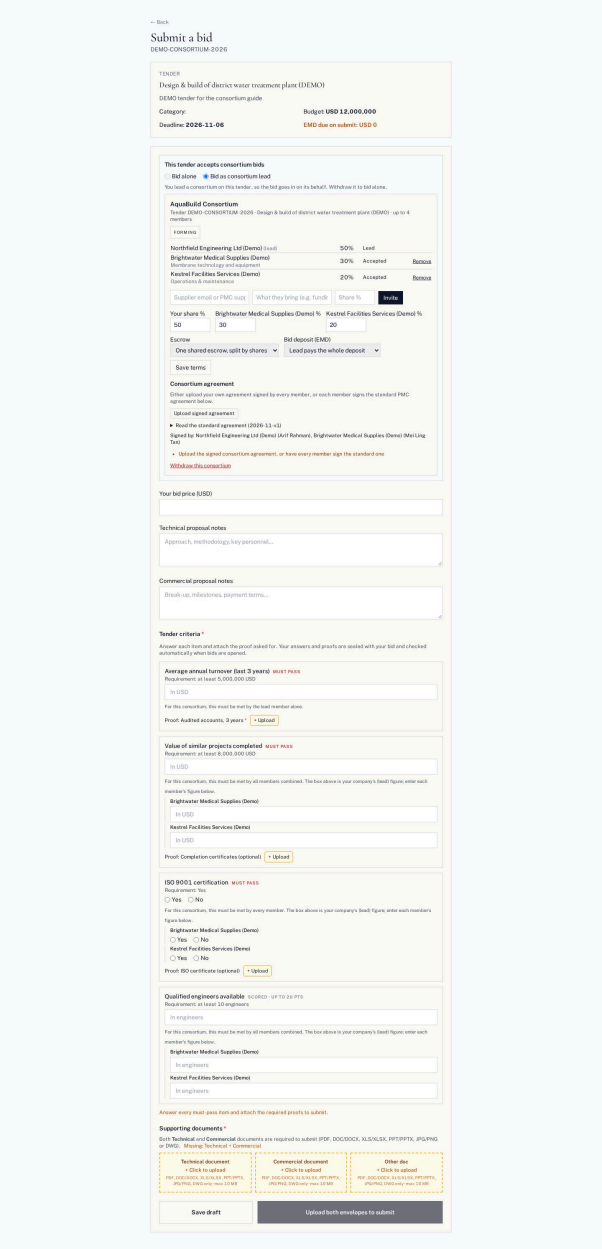

3. Each invited member accepts or declines

Brightwater gets an email and a portal notification. Under Consortia it sees the team, its share and can Accept or Decline. A member can't bid alone on the same tender while in a consortium.

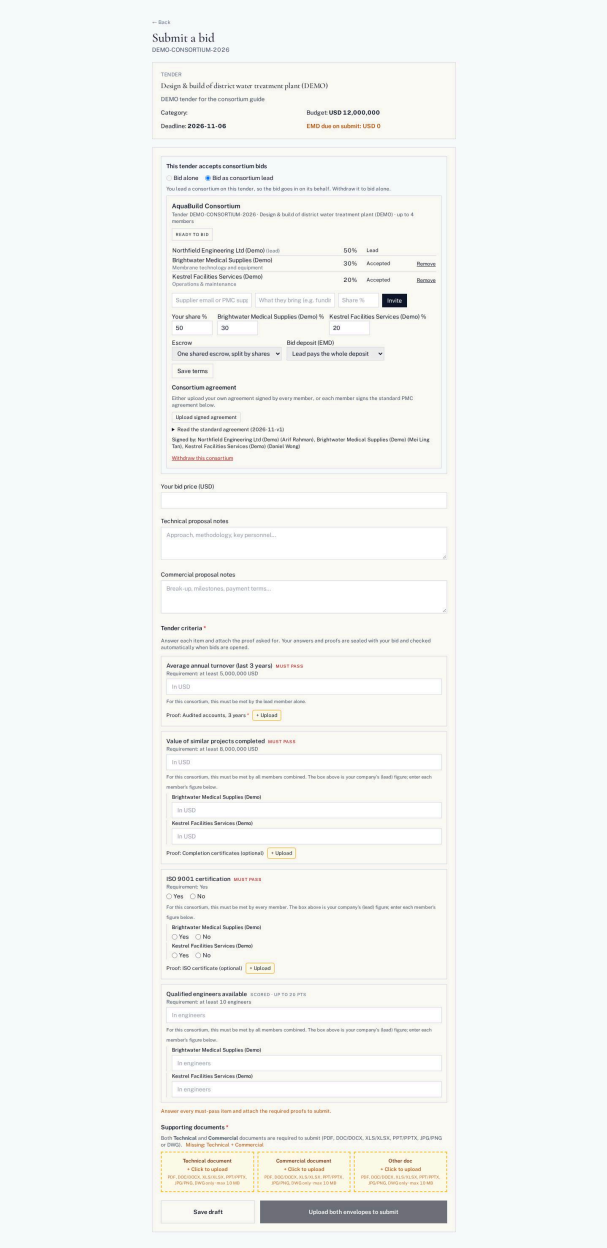

4. Shares, escrow, deposit and the consortium agreement

The lead sets shares (must total 100%), chooses one shared escrow split by shares or a separate escrow per member, and who pays the bid deposit. The agreement is either uploaded signed by all, or every member signs the standard PMC agreement. The checklist shows what is still missing (here: Kestrel has not signed yet).

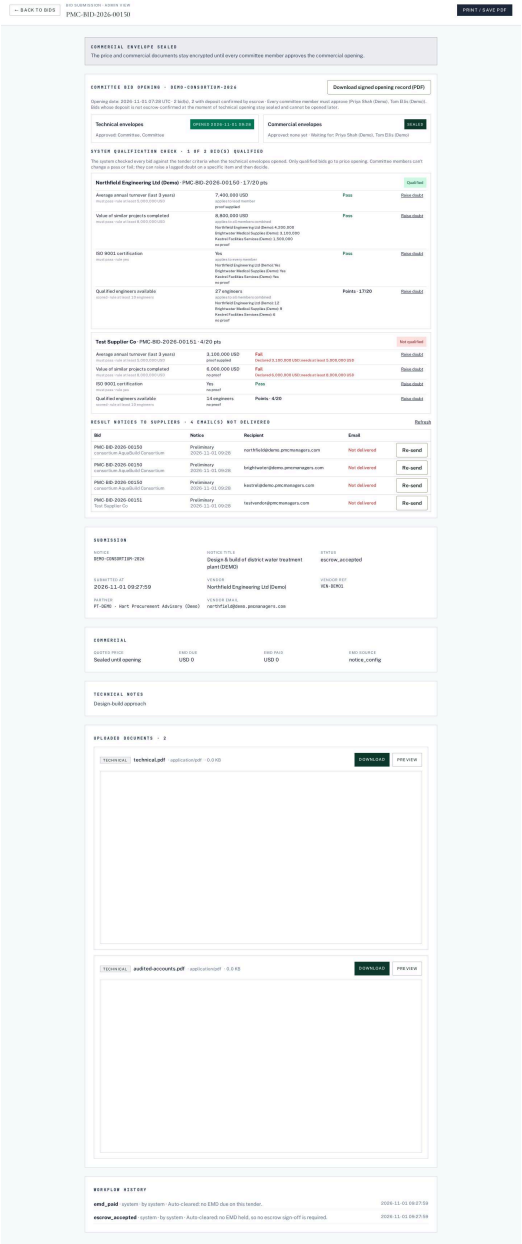

5. The bid: one sealed bid with every member's figures

Once ready, the lead fills the criteria. For 'combined' and 'every member' criteria the form asks for each member's figure; proof is attached and sealed with the bid. Price and documents are sealed until opening.

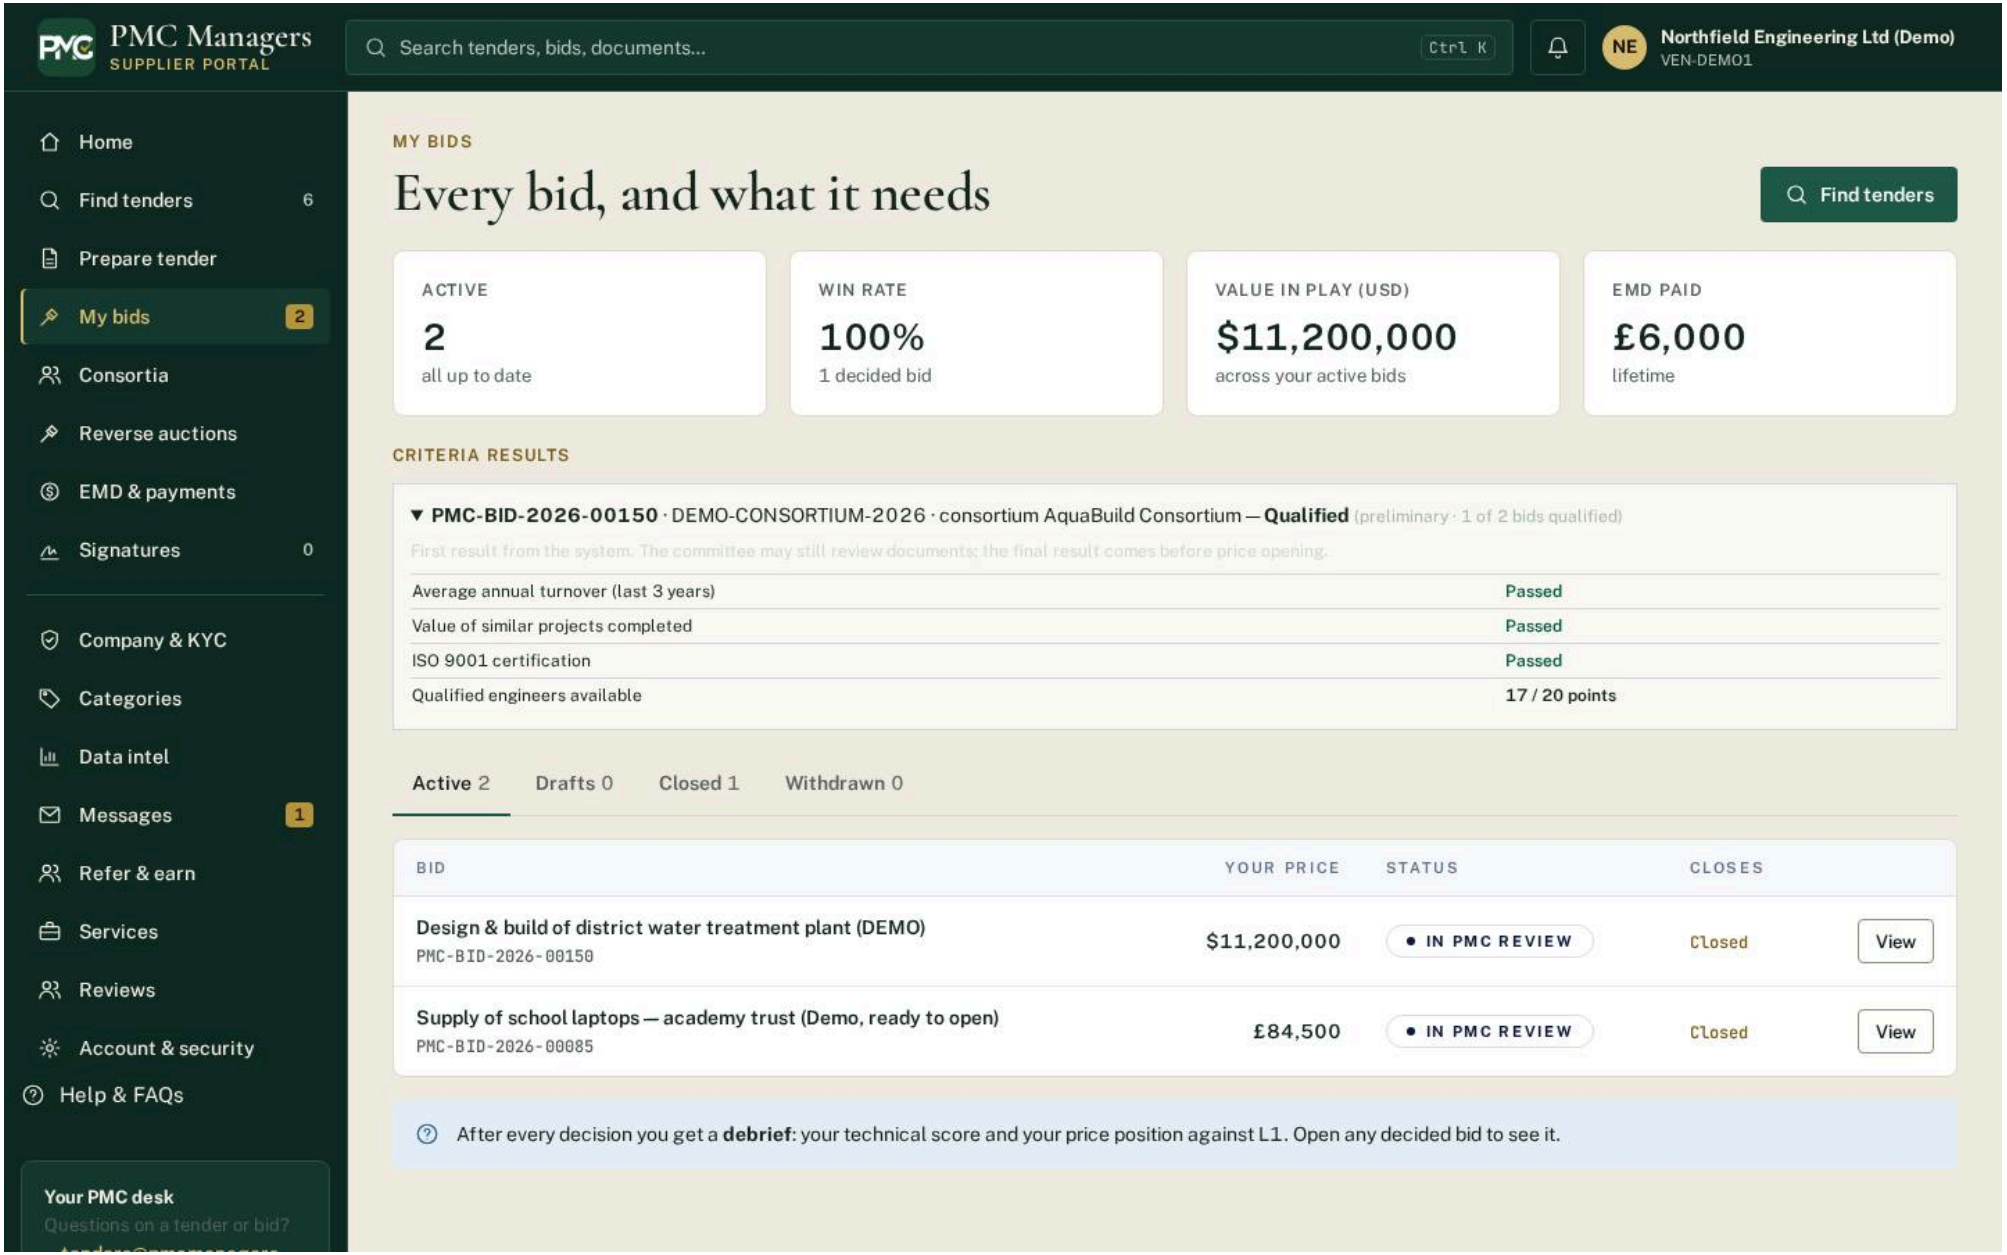

6. Opening: the system qualifies every bid by itself

When the committee opens the technical envelopes, the system checks every bid against each criterion: lead-only items use the lead's figure, combined items add up all members, every-member items must be met by each. Each line shows pass/fail and the reason. The committee can't change a result; it can only raise a logged doubt on a document. Only qualified bids go on to price opening.

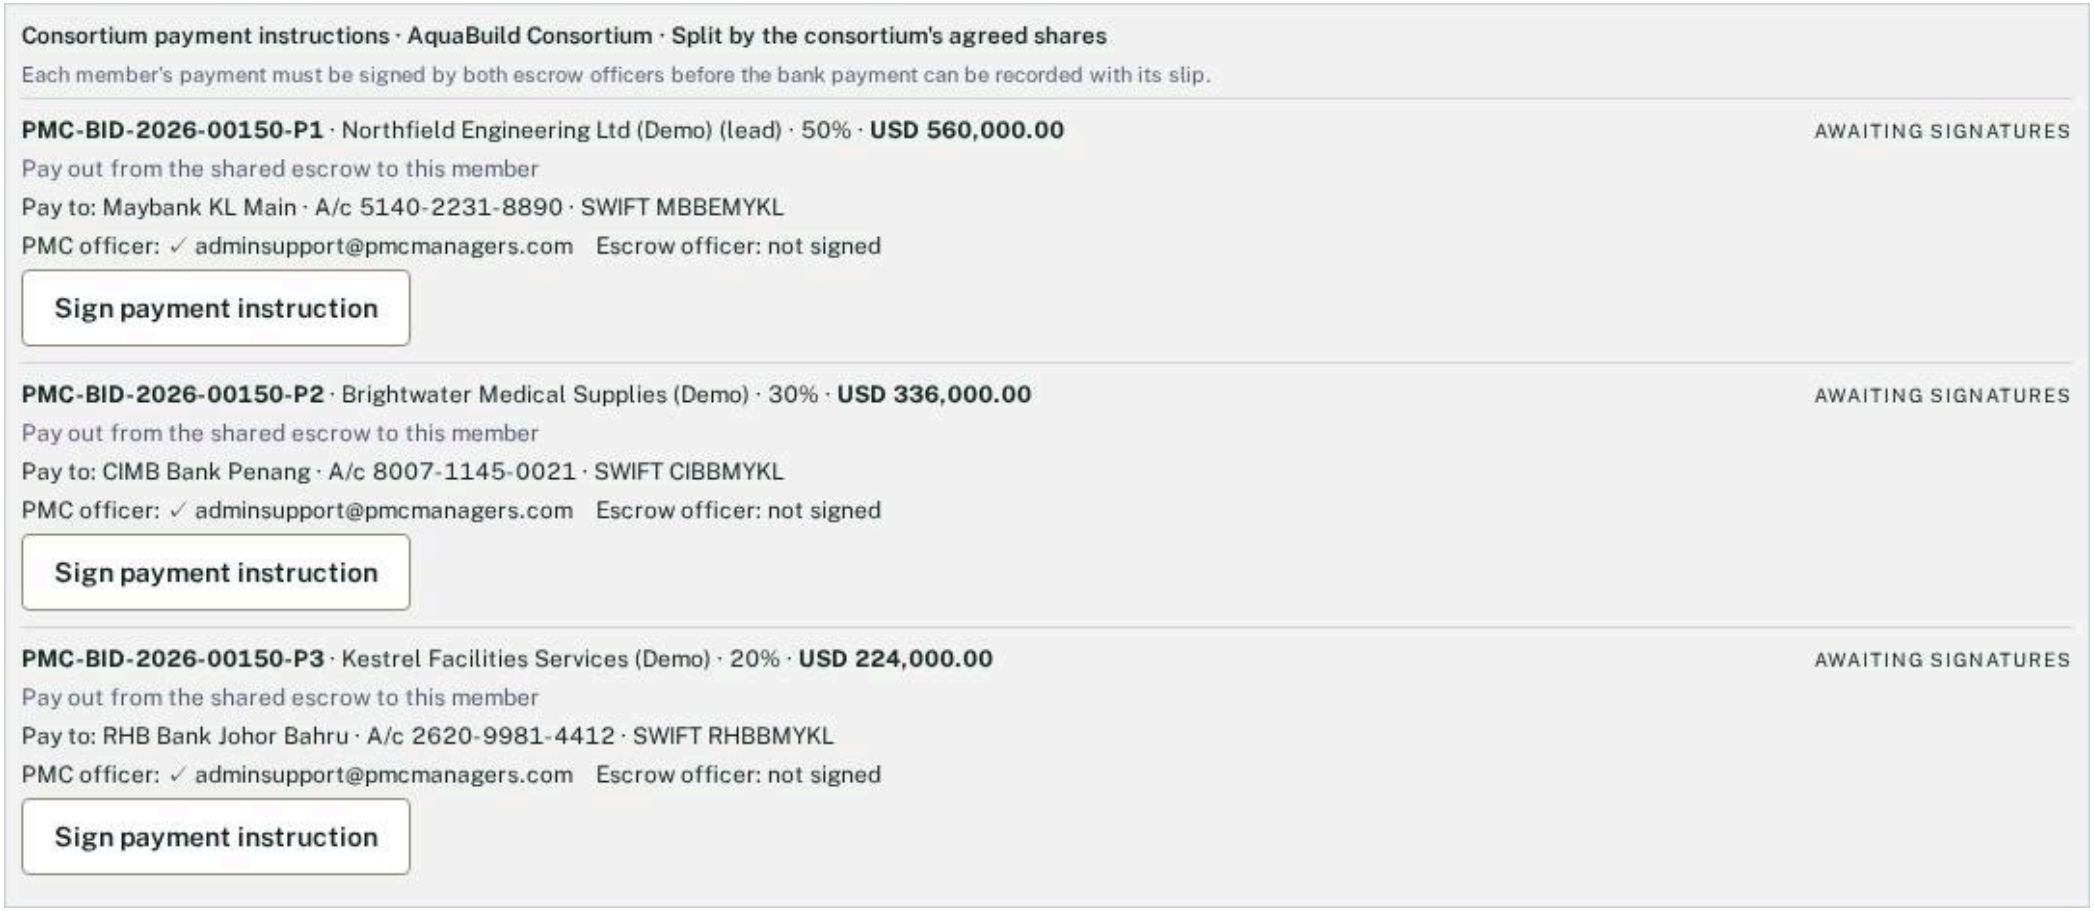

7. Every supplier gets their own result notice

A first result is emailed and shown in My bids right after technical opening; the final result follows once doubts are settled, just before price opening. Each supplier sees only its own criteria results and how many bids qualified, never other bidders' names. Admin sees every result email and whether it was delivered, and can re-send failed ones (the demo addresses don't receive mail, so they show 'Not delivered' on the previous page).

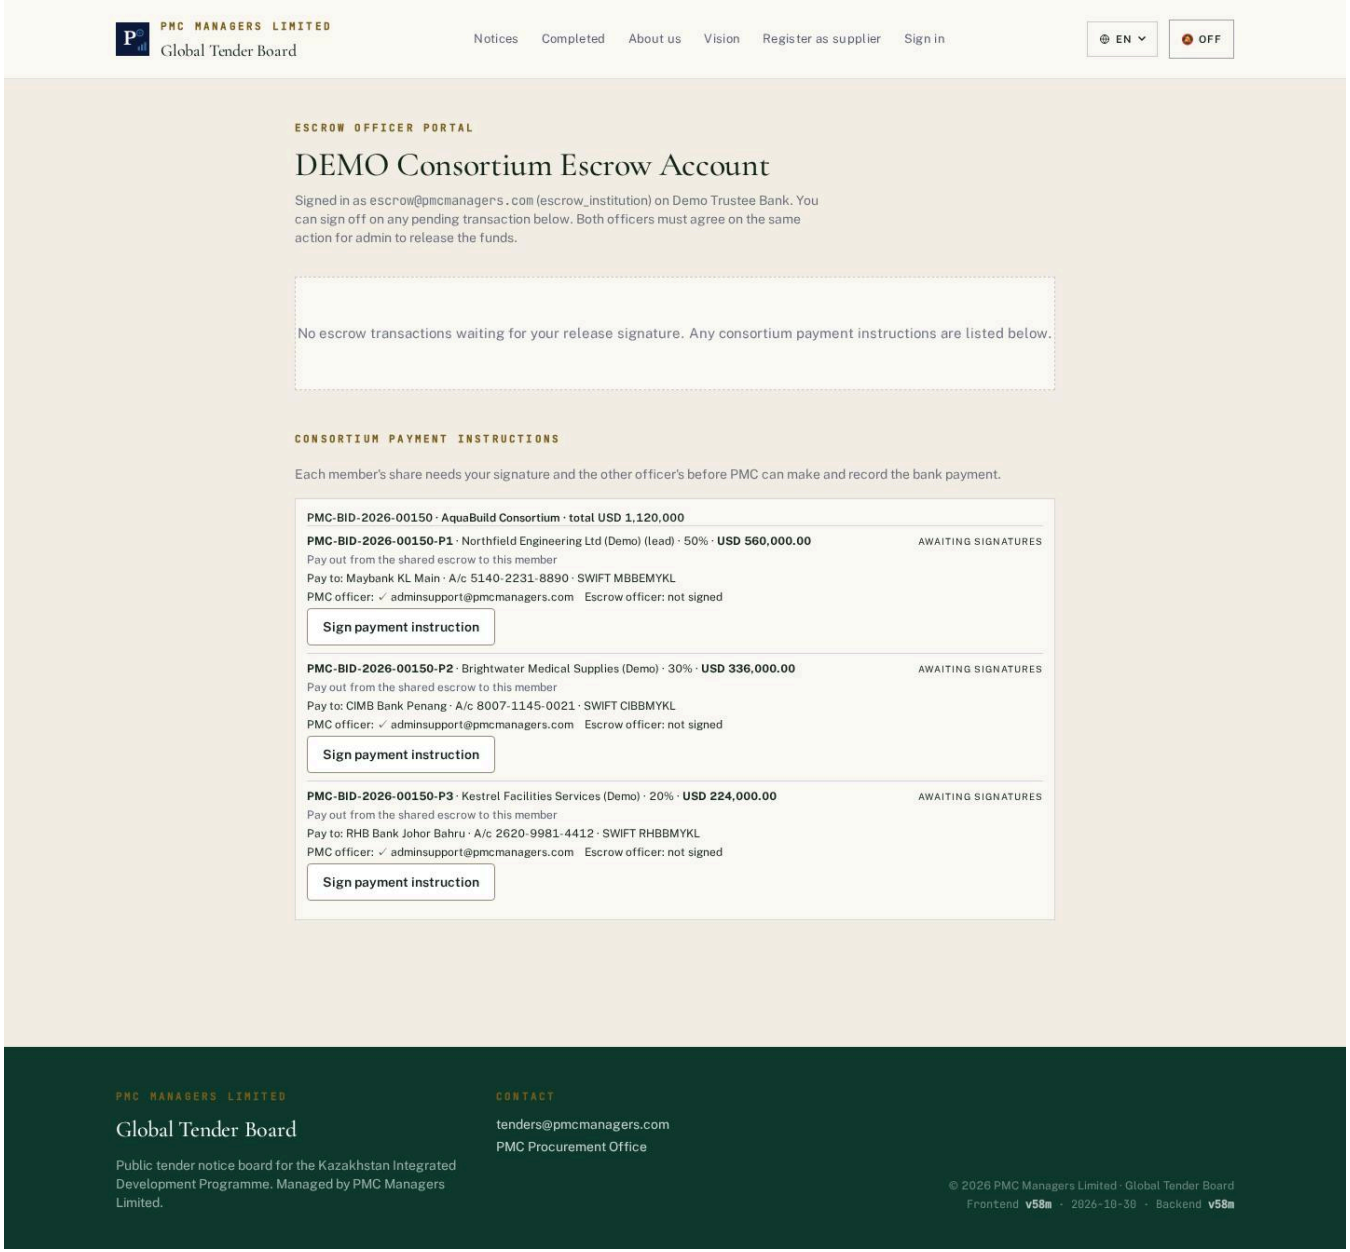

8. Award payment: split into one instruction per member

After award, when both escrow officers release a payment, the system splits it by the agreed shares (50/30/20) into one payment instruction per member, with the member's bank details. Here the PMC officer has signed; the escrow officer still has to.

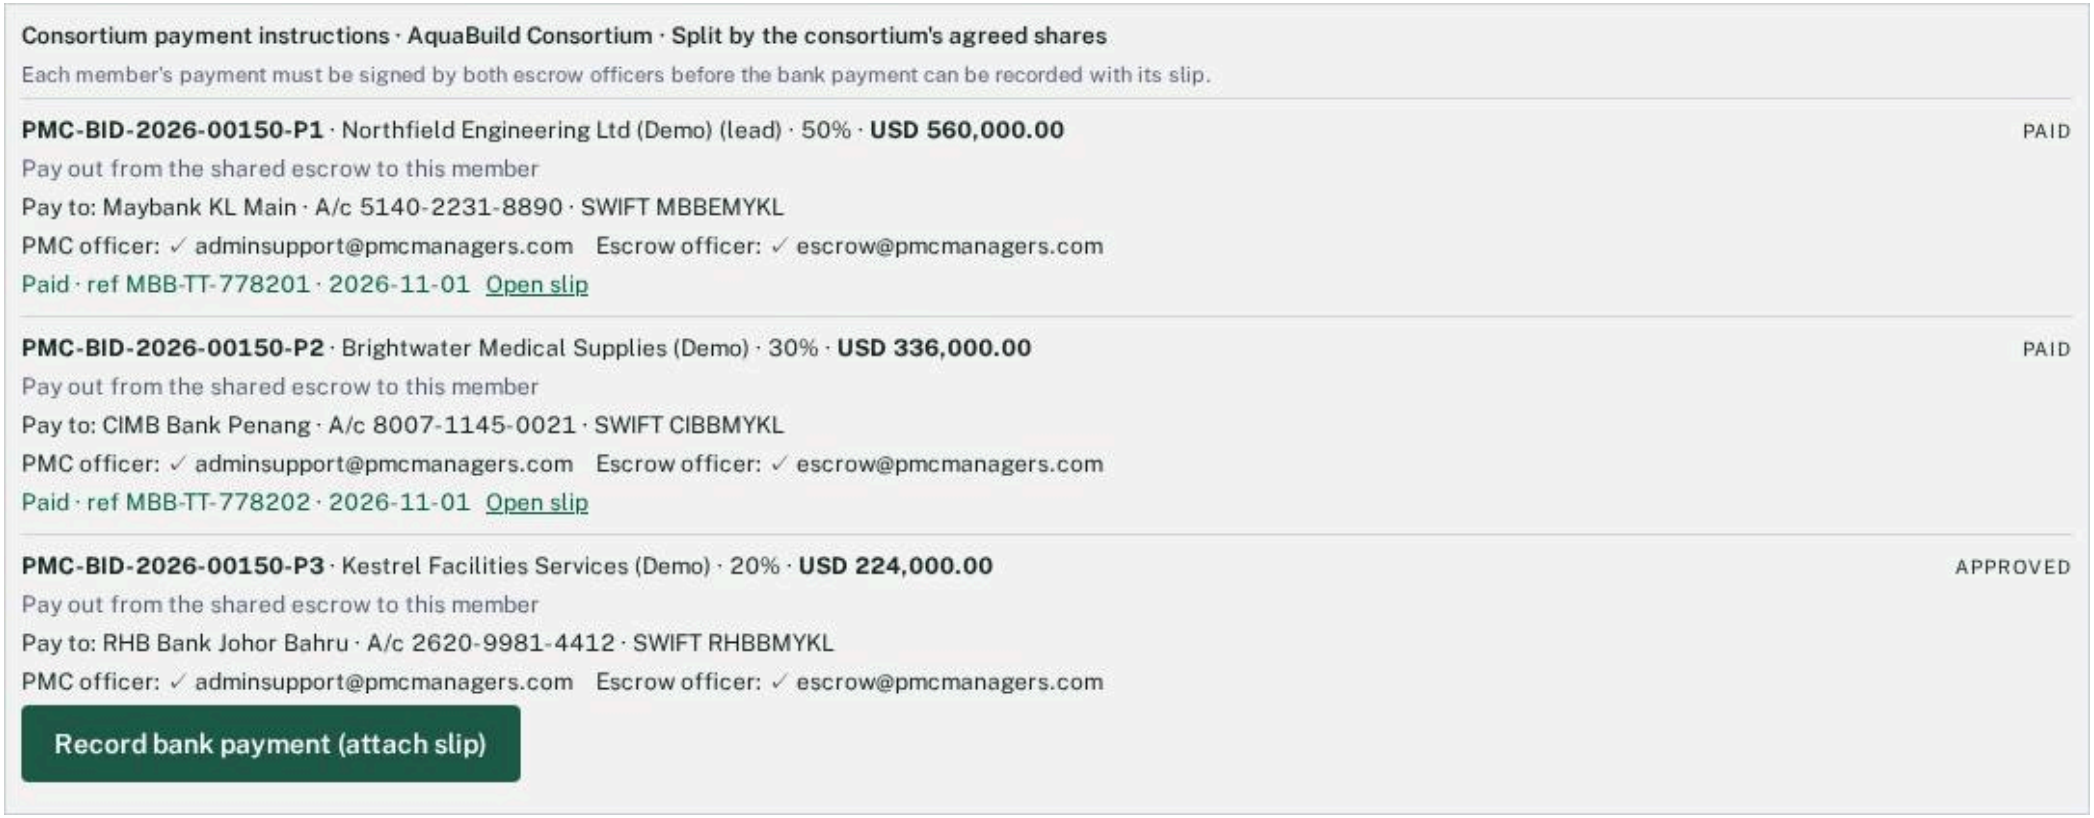

9. The escrow institution officer signs from their secure link

The escrow bank's officer signs each instruction from the emailed signing link, with no PMC login needed. No payment can be recorded until both officers have signed.

10. Bank payments recorded with slip, and the audit spreadsheet

Accounts makes each bank transfer, then records it with the bank reference and the payment slip. 'Consortium payments · CSV' downloads every instruction, share, bank account, both signatures and payment reference for accounts and audit.

11. Each member tracks its own payments

In Consortia ? My consortium payments, each member sees its share, the account it goes to (last 4 digits), both officer signatures and, once paid, the bank reference.
