- **Committee Accept Portal** — *0 action(s)*
- **Escrow Officer Portal** — *0 action(s)*

Dashboard — Analytics

Surface: admin

URL path: /admin?tab=analytics

Purpose: The Dashboard tab is the Admin's operational overview. It shows the supplier funnel (Draft → Submitted → Approved), open notice counts, bidder engagement metrics, and any SLA breaches across the platform. Owned by the Master Admin; visible to all admin roles.

Prerequisites

- Admin login as any admin role

1. Review the supplier funnel

When to use: Weekly review, or before publishing a new tender.

Steps

1. Log in via `/login` as an admin.
2. Land on `/admin` — you're on the Dashboard tab by default.
3. Look at the four KPI tiles at the top: Draft · Submitted · Approved · Rejected.
4. Hover any tile to see the 7-day trend arrow.

Expected result: Live counts refresh every 60 seconds. Green arrow = healthy.

Controls & fields

- **Refresh:** Force-refresh the tiles without a full page reload.
- **Time window:** 7d / 30d / 90d toggle for trend arrows.

Common errors & fixes

- **0 across all tiles — Tiles all show zero**

  Fix: Check that at least one registration or notice exists. If yes and tiles are still zero, run `curl /api/v1/meta/public/stats` — a non-zero response confirms the frontend cache is stale (hard-refresh).

Notices

Surface: admin

URL path: /admin?tab=notices

Purpose: The Notices module is where you draft, review, publish, corrigenda, and archive tender notices. Every published notice appears on the public notice board (`/`) and drives all downstream flows: registration, bidding, evaluation, and awards. The Master Admin is the only role that can toggle 'Publish immediately'.

Prerequisites

- Admin login (Master Admin required to publish immediately)
- At least one tender template if using Tender Builder integration

1. Draft a new tender notice

When to use: You need to publish a new tender, RFP, or RFQ.

Steps

5. Click **NEW NOTICE** (top-right of the Notices tab).
6. Fill in **Title** (≥ 3 chars) and **Description** (≥ 10 chars).
7. Pick the **Type** (tender / rfp / rfq) and **Country**.
8. Optionally attach documents via drag-and-drop.
9. Tick **Publish immediately** if you are Master Admin — otherwise Save as draft.
10. Click **CREATE NOTICE**. A green toast confirms creation.

Expected result: Draft appears in the notices list. If published, notice_ref is generated (e.g. `PMC-NOT-2026-0042`) and it appears on the public board within 30 sec.

Controls & fields

- **Title:** Public headline. Bug #20: min 3 chars enforced with clear toast.
- **Description:** Notice body — supports Markdown. Min 10 chars.
- **Publish immediately:** Bug #21: only enabled for Master Admin (case-insensitive role check tolerates 'master_admin', 'Master Admin', 'MASTER-ADMIN').
- **Type:** tender · rfp · rfq — drives which registration section is required.
- **Country:** ISO alpha-2 code (KZ default). Multi-country tenders — leave global.
- **Attachments:** PDF/DOCX up to 25 MB each. Stored server-side, downloadable from public notice detail page.

Common errors & fixes

- **HTTP 422 — Title minimum 3 characters**

Fix: Type at least 3 characters into Title.

- **HTTP 422 — Description minimum 10 characters**

  Fix: Description body is required and must be ≥ 10 characters.

- **Checkbox disabled — Publish immediately is greyed out**

  Fix: Your role isn't Master Admin. Save as draft and ask a Master Admin to publish.

2. Review and publish a draft notice

When to use: A reviewer/staff member has left a draft that needs Master Admin sign-off.

Steps

11. In the Notices list, filter by status = `draft`.
12. Click the draft row to open the detail panel.
13. Review title, description, attachments.
14. Tick **Publish immediately** and click **UPDATE** — the notice goes live.

Expected result: Row status flips from `draft` → `published`. `Cache-Control: no-store` on `/admin/all` means the list refreshes immediately.

Controls & fields

- **Status filter:** draft / published / archived. Deep-linkable via `?tab=notices&status=draft`.

Common errors & fixes

- **HTTP 403 — You cannot publish this notice**

  Fix: Reviewer roles cannot publish. Ask Master Admin.

3. Issue a corrigenda on a published notice

When to use: A material change is needed after publication (deadline, scope, EMD amount).

Steps

15. Open the Corrigenda tab (adjacent to Notices).
16. Click **NEW CORRIGENDA** and pick the parent notice ref.
17. Describe the change (min 20 chars — this is a legal amendment).
18. Attach the amended clause PDF if any.
19. Click **PUBLISH CORRIGENDA**. An email is sent to every registered supplier for that notice.

Expected result: Parent notice detail page gets a red 'CORRIGENDA #1' ribbon that expands to the amendment text. Supplier emails go out via Resend within 60 sec.

Controls & fields

- **Parent notice:** Dropdown of all published notices — cannot corrigend a draft.
- **Amendment body:** ≥ 20 chars, required — displayed verbatim to bidders.

Common errors & fixes

- **HTTP 409 — Corrigenda cannot be issued on archived notices**

  Fix: Un-archive the notice first via the Archive filter.

Registrations

Surface: admin

URL path: /admin?tab=registrations

Purpose: Registrations is where reviewers approve, reject, or ask for clarification on supplier registration submissions. Each registration is scoped to a status (submitted / under_review / needs_clarification / approved / rejected / draft) and can carry document attachments. Filter tabs use the reviewer's session state — Bug #15 ensures the previously-selected row clears when you switch tabs.

Prerequisites

- Admin login as `admin` or `reviewer` role

1. Review a submitted registration

When to use: A supplier has completed all 5 sections and clicked Submit.

Steps

20. Open **Registrations** tab (`/admin?tab=registrations`).
21. The default filter is `submitted` — click any row on the left.
22. Right pane shows: company details, entity type, primary sector, KZ licenses, business description, and uploaded documents.
23. Click **View** or **Download** on each document to inspect it.
24. Fill **Reviewer notes** (required for reject / clarify actions).
25. Click **APPROVE**, **REQUEST CLARIFICATION**, or **REJECT**.

Expected result: Toast confirms the action ('Approval recorded' / 'Clarification recorded' / 'Rejection recorded'). Filter auto-switches to the new status tab so you see where the record went.

Controls & fields

- **Status filter tabs:** submitted · under_review · needs_clarification · approved · rejected · draft. Bug #15: switching clears the selected row.
- **Nudge stale drafts:** Emails everyone whose draft is > 7 days old. Bug #46: clearer 'Reminders sent to X of Y stale drafts' toast, or 'No stale drafts found' when none match.
- **Reviewer notes:** Required for reject / clarify — an audit trail entry.

Common errors & fixes

- **HTTP 400 — Notes required for this action**

  Fix: Type a reason in the Reviewer notes textarea before clicking Reject or Request Clarification.

- **Uploaded document opens 404 — Document URL returns Not Found**

  Fix: Attachment was pruned during storage cleanup. Ask the supplier to re-upload.

2. Nudge stale draft applicants

When to use: Weekly hygiene, or before closing a tender that draws a specific supplier segment.

Steps

26. Click **NUDGE STALE DRAFTS** (top-right of the Registrations tab).
27. The button greys out and text changes to `Sending…`.
28. Within ~30 sec a toast appears with the count.

Expected result: Info toast if 0 checked, Warning toast if all checked but none matched threshold, Success toast with count if reminders sent.

Controls & fields

- **NUDGE STALE DRAFTS button:** Uses `POST /api/v1/registrations/admin/send-reminders`. Threshold: 7 days since last edit.

Common errors & fixes

- **HTTP 401 / redirect to login — Session expired mid-nudge**

  Fix: Log in again and re-click. Reminders are idempotent — no supplier gets nudged twice.

Vendors

Surface: admin

URL path: /admin?tab=vendors

Purpose: Vendors is the approved-supplier directory. From here you invite new vendors (single email or bulk CSV), fill in the full registration form on behalf of an offline supplier, filter by verification/active status, and see per-vendor KPI dashboards (days approved, review turnaround, KZ licenses held, business categories declared).

Prerequisites

- Admin login as `admin` or `staff_admin`
- For Bulk invite: a UTF-8 CSV with columns email,company_name,contact_name,country

1. Invite a single vendor

When to use: You know a supplier by email and want to pre-register them.

Steps

29. Click **INVITE VENDOR** (top-right of the Vendors tab).
30. Fill vendor email, company name, contact name, and country (default KZ).
31. Click **SEND INVITATION**.

Expected result: Success toast with the auto-generated vendor_ref (e.g. `PMC-VEN-2026-0189`). The vendor receives an email via Resend with a magic-link to verify their address and set a password. Row appears in the Vendors list with `pending_verify` badge.

Controls & fields

- **Vendor email:** Required, RFC-valid. Also becomes the login username.
- **Company name:** Legal name — shown in the KPI dashboard header.
- **Country:** ISO alpha-2. KZ default; drives which licenses list applies.

Common errors & fixes

- **HTTP 409 — A vendor with this email already exists**

  Fix: Search for the existing vendor in the list; use Resend invite from the vendor row.

- **HTTP 422 — Vendor email invalid**

  Fix: Emailing standard: `local@domain.tld`.

2. Add and fill the full registration form

When to use: A supplier delivered a paper application; you're transcribing it into the system.

Steps

32. Click **ADD & FILL FULL FORM** — you're redirected to `/admin/vendors/new`.
33. Fill Section A (company details), B (contacts + signatory), C (business categories), D (KZ licenses), E (bank details + declarations).
34. Click **CREATE**. Bug #63: you're redirected to `/admin?tab=vendors` so the new vendor is visible immediately.

Expected result: Toast confirms creation and mode (Active immediately / Verify required). Vendor row appears at the top of the Vendors list.

Controls & fields

- **Active immediately:** Skips email verification. Use only when the supplier is physically present.
- **Send verify email:** Standard flow — supplier gets a magic-link email to confirm the address.

Common errors & fixes

- **HTTP 409 — Draft with this email already exists**

  Fix: Bug #76: the frontend resets document_slots + draftId when you change the email. If it still fires, close and re-open the form.

3. Bulk invite vendors via CSV

When to use: You have a list of 10-500 suppliers to onboard at once.

Steps

35. Click **BULK INVITE (CSV)**.
36. Drag a UTF-8 CSV with columns `email,company_name,contact_name,country`.
37. Preview shows the first 5 rows + parse errors (missing columns, invalid emails).
38. Click **SEND ALL** — a progress bar shows N/total sent.

Expected result: Modal closes with a summary: `X invited · Y skipped (duplicate) · Z failed (invalid email)`. The Vendors list auto-reloads.

Controls & fields

- **CSV upload:** UTF-8-BOM tolerant (Bug #8 fixed for Cyrillic company names).
- **Send all button:** Fires the invites in batches of 20 to respect Resend rate limits.

Common errors & fixes

- **HTTP 400 — CSV missing required column 'email'**

  Fix: Ensure the header row is exactly `email,company_name,contact_name,country`.

4. Inspect a vendor's KPI dashboard

When to use: Diligence check before awarding a contract, or quarterly performance review.

Steps

39. Click any row in the Vendors list.
40. Right panel loads the KPI dashboard.
41. Four tiles: Days approved · Review turnaround (h) · KZ licenses · Categories.
42. Below: KZ licenses held (list), Operating regions, Business categories declared.

Expected result: KPI panel refreshes within 500 ms of clicking. Blank tiles for very new vendors — populate after first tender participation.

Controls & fields

- **Days approved:** Days since the vendor's registration was Approved.
- **Review turnaround:** Hours between Submitted and Approved decision.

Common errors & fixes

- **KPI loading forever — Spinner never resolves**

  Fix: Vendor might be in `pending_verify` state — KPI is only computed after verification. Check the badge on the row.

Bidding Ops

Surface: admin

URL path: /admin?tab=bidding

Purpose: Bidding Ops manages the multi-stage bid pipeline: EMD receipt → Admin flag → Certifier clearance → Legal → Accounting → Committee vote → Award. It also hosts the bid committee formation flow (internal + external invitees, chairperson, quorum) and the dissolve/re-form workflow.

Prerequisites

- Admin login as `admin` or `committee_member`
- At least one published notice with received EMD

1. Form a bid committee

When to use: A tender has attracted the minimum number of bids and evaluation is ready to start.

Steps

43. In the Bidding Ops tab, click **FORM COMMITTEE**.
44. Type the notice ref (e.g. `PMC-NOT-2026-0042`).
45. Tick internal member checkboxes (admin pool). Chairperson dropdown auto-filters to selected members.
46. Set quorum (auto-capped to selected member count).
47. Optionally add external invitees (name + email + designation) — they'll receive email invites with a magic-link.
48. Click **FORM COMMITTEE**.

Expected result: Success toast: 'Committee formed · N internal member(s) · M external invited by email'. Committee appears under **Active committees** at the top of the panel.

Controls & fields

- **Notice ref:** Must match an existing notice. One committee per notice at a time.
- **Member checkboxes:** Tick to include. Chair dropdown intersects with this selection.
- **Chairperson:** Must be a member. Casts the deciding vote in case of tie.
- **Quorum:** Minimum votes required to close the committee. ≤ member count.
- **External invitee:** Bug #9b: dissolve button now sends CSRF token — no more silent 403.

Common errors & fixes

- **HTTP 409 — Open committee already exists for this tender**

Fix: Dissolve the existing committee first (see Dissolve action below), then re-form.

- **HTTP 400 — Missing required fields**

  Fix: Notice ref, chairperson, and at least one member must all be set. Bug #9d: toast now describes the exact missing field.

2. Dissolve an active committee

When to use: Committee is deadlocked, or the tender itself was cancelled.

Steps

49. Locate the committee row under **Active committees**.
50. Click **DISSOLVE COMMITTEE**.
51. Type a reason (≥ 8 chars) in the prompt.
52. Confirm.

Expected result: Success toast: 'Committee dissolved · notice_ref · reason: "..."'. Row moves to **Recently closed / dissolved** section.

Controls & fields

- **Dissolve reason:** Audit trail entry, ≥ 8 chars. Shown italicised in the closed strip.

Common errors & fixes

- **HTTP 403 — CSRF token missing or invalid**

  Fix: Bug #9b: fixed in v38. If you still see this, hard-refresh Safari to pick up main.95d55513.js.

- **HTTP 409 — Committee already closed**

  Fix: Someone else dissolved it. Refresh the panel.

3. Admin-flag or reject a bid

When to use: A bid has cleared EMD receipt and is awaiting Admin sign-off before moving to Certifier.

Steps

53. Scroll to the **Bids** table.
54. Filter by status = `emd_paid` (or use the free-text search).
55. For each bid, click **FLAG TO CERTIFIER** or **REJECT**.

Expected result: Bid status transitions to `admin_flagged` or `rejected`. Row moves to the corresponding filter section.

Controls & fields

- **Status filter:** 9-state dropdown covering the full pipeline.
- **Assign certifier:** Opens a modal to pick a certifier + schedule an inspection.

Common errors & fixes

- **HTTP 403 — You cannot decide this bid**

  Fix: Only `admin` and `staff_admin` roles can flag; reviewers can only view.

Escrow (EMD)

Surface: admin

URL path: /admin?tab=escrow

Purpose: Escrow is the governance-first EMD ledger. Every joint account is jointly operated by two officers (one from PMC, one from the escrow institution) and every release requires BOTH to sign the same action. The panel shows: joint accounts, the transactions ledger, and a reconciliation (ledger vs bank) view. Bug #9c added a red governance banner and 409 backend guard when both officers share the same email — dual-signature is impossible in that state.

Prerequisites

- Admin login as `admin` or `accounting` or `escrow_agent`
- At least one active joint account with DISTINCT emails on each officer

1. Create a new joint escrow account

When to use: A new escrow relationship is set up with a bank or trustee.

Steps

56. Click **NEW JOINT ACCOUNT** (Joint Escrow Accounts section).
57. Enter account display name (e.g. 'PMC-KZ Tender EMD Escrow #2').
58. Institution name (e.g. 'Kaspi Bank').
59. Account number + IBAN + SWIFT + currency (USD/EUR/KZT).
60. PMC officer: name + email + designation.
61. Escrow officer: name + email + designation. **Must be a different person / different email.**
62. Click **CREATE**.

Expected result: Success toast; account card renders under Joint Escrow Accounts.

Controls & fields

- **PMC officer email:** Represents PMC on the joint control. Must be different from Escrow officer email.
- **Escrow officer email:** Represents the bank / trustee. Bug #9c: creation refuses same email on both sides.
- **Currency:** 3-letter ISO. Default USD; KZT for local wires.

Common errors & fixes

- **HTTP 400 — PMC officer and Escrow officer must be different people**

  Fix: Use a distinct email for the escrow officer (a real trustee at the bank, or issue a magic-link via `POST /api/v1/escrow/magic-tokens`).

2. Record an inbound EMD receipt

When to use: The bank confirms a bidder's EMD has landed in the joint account.

Steps

63. Click **RECORD INBOUND EMD**.
64. Pick the joint account from the dropdown (only active accounts show).
65. Enter bid_ref, notice_ref, vendor_ref, amount, currency, bank reference (UTR).
66. Click **RECORD RECEIPT**.

Expected result: Transaction row appears in the ledger with status `received`.

Controls & fields

- **Bank reference:** UTR / SWIFT MT-103 reference — audit trail.
- **Amount:** > 0 required. Currency must match the account currency.

Common errors & fixes

- **HTTP 404 — Active escrow account not found**

  Fix: Account may have been deactivated. Re-activate it via patch endpoint or create a new one.

3. Sign a release action

When to use: The committee has awarded the contract and the winning bidder's EMD is to be released.

Steps

67. Locate the received transaction in the ledger.
68. Verify the joint account has DISTINCT emails on both officers — if not, a red governance banner will block this step.
69. Click **SIGN · RELEASE TO CONTRACTOR** (or the appropriate action).
70. The signature card for your side (PMC or Escrow officer) turns green.
71. The other officer must also sign the same action — they use the same button while logged in as their email, or via magic-link if external.

Expected result: Blue info toast: 'Signed as PMC officer — awaiting the Escrow officer. Nothing has been transferred yet.' Once both sides sign, a green success toast: 'Both officers signed — Release is now unlocked.'

Controls & fields

- **Sign buttons:** Three actions: release_to_contractor · release_to_vendor · forfeit. Bug #9c: disabled if governance broken (same email on both sides).

- **Release button:** Only fires after both signatures match. Bug #9c: label reads 'RELEASE (BLOCKED — FIX OFFICERS)' when governance broken.

Common errors & fixes

- **HTTP 409 — This joint escrow account has the SAME email on both officers ... Nothing has been signed.**

  Fix: Edit the account and set the Escrow officer to a different email, or issue a magic-link for an external trustee via `POST /api/v1/escrow/magic-tokens`.

- **HTTP 409 — Transaction already released_to_contractor**

  Fix: You can't re-sign a released transaction. Nothing to do.

4. Fire the release once dual-signed

When to use: Both officers have signed the same action.

Steps

72. Click **RELEASE (UNLOCKED)** on the transaction row.
73. Confirm the release amount + beneficiary in the browser prompt.

Expected result: Green toast: 'Release recorded — ledger closed'. Status flips to `released_to_contractor` / `released_to_vendor` / `forfeited`.

Controls & fields

- **Release confirmation:** Native confirm() dialog with amount and action — prevents accidental release.

Common errors & fixes

- **HTTP 409 — Both officers must sign the same action before release**

  Fix: Bug #9d: toast now explicitly shows what each side has signed. Ensure both sides picked the same action.

5. Issue a magic-link to an external escrow officer

When to use: The trustee at the bank does not need a full staff account.

Steps

74. Currently API-only (no UI form yet).
75. ```bash
76. curl -X POST https://www.pmcmanagers.com/api/v1/escrow/magic-tokens \
77.   -b cookies.txt -H "X-CSRF-Token: $CSRF" \
78.   -H "Content-Type: application/json" \

79. -d '{"account_id":"<ACC_ID>","officer_email":"trustee@bank.com"}'
80. ```
81. Response: `{"token": "...", "portal_url": "/escrow/officer/<token>"}`
82. Email the portal_url to the trustee.

Expected result: Trustee opens the URL → sees the pending transactions on their account → clicks Sign — no staff login required.

Controls & fields

- **officer_email:** Must match one of the two officer emails on the account.

Common errors & fixes

- **HTTP 400 — Officer email is not on this joint account**

  Fix: Update the account first with the trustee's email, then re-issue the token.

Evaluation

Surface: admin

URL path: /admin?tab=evaluation

Purpose: Evaluation covers the technical + commercial scoring of bids by the committee. It manages: rubric setup (weights + minimum technical cutoff), Conflict-of-Interest declaration per evaluator, envelope locking (Tech + Comm cannot be edited after lock), scoring entry, and the final Award Report generation. Bug #49 hardened the rubric validators (weights sum to 1.0, per-criterion 0-1, min-tech 0-100). Bug #52 stops re-scoring after envelope lock.

Prerequisites

- Admin login as `admin`, `committee_member`, or `reviewer`
- At least one committee formed for the notice
- COI declaration submitted by every evaluator

1. Set up the scoring rubric

When to use: Immediately after committee formation, before any evaluator signs in.

Steps

83. Open the Evaluation tab and enter the notice_ref.
84. In the Scoring Rubric card, fill each criterion's **Weight** (0–1). Sum must be exactly 1.00.
85. Set the **Commercial weight** (0–1) — controls Tech/Comm split.
86. Set the **Minimum technical cutoff** (0–100 percent).
87. The **SAVE RUBRIC** button is disabled while any error is shown.
88. Click **SAVE RUBRIC**.

Expected result: Green toast. Committee members can now start scoring.

Controls & fields

- **Weight (per criterion):** $0 \le w \le 1$. Sum must equal 1.00. Bug #49: live validation.
- **Max score (per criterion):** Server enforces individual scores $\le$ max. Bug #49.
- **Commercial weight:** $0 \le cw \le 1$. Technical gets (1 - cw).
- **Minimum technical cutoff:** $0 \le m \le 100$. Bids below this are auto-disqualified before commercial opening.

Common errors & fixes

- **HTTP 422 — Technical criteria weights must sum to 1.0 (got X.XX)**

  Fix: Adjust rows so weights sum to 1.00 (100%).

- **HTTP 422 — minimum_technical must be between 0 and 100**

  Fix: Use percent form (60 for 60%, not 0.60).

2. Declare Conflict-of-Interest

When to use: Before scoring any bid on a tender you're evaluating.

Steps

89. In the Evaluation tab, click **DECLARE COI**.
90. Answer 'Do you have a conflict?' — yes/no.
91. If yes: describe the conflict (required).
92. Submit.

Expected result: Green toast: 'COI declared'. If declared yes, scoring is blocked for you (backend 403).

Controls & fields

- **Has conflict:** Boolean — required.
- **Details:** Required when 'yes' — audit trail.

Common errors & fixes

- **HTTP 400 — You must declare Conflict-of-Interest before scoring**

  Fix: Declare first, then retry scoring.

3. Score a bid

When to use: After rubric + COI + envelope open.

Steps

93. Enter bid_id (from Bidding Ops).
94. Pick envelope kind: technical or commercial.
95. For technical: enter a score per criterion ($0 \le s \le$ max_score).
96. For commercial: enter a single commercial score (0–100).
97. Add remarks.
98. Click **SUBMIT SCORE**.

Expected result: Green toast. Scores persist and are visible in the Award Report preview.

Controls & fields

- **Bid id:** Mongo ObjectId. Auto-completed from the Bidding Ops filter.
- **Scores per criterion:** Backend validates each value is within [0, max_score]. Bug #49.

Common errors & fixes

- **HTTP 409 — The technical envelope for <notice> was locked at <timestamp>. Scores can no longer be submitted or edited.**

  Fix: Bug #52: envelope is locked. Generate the Award Report — you can view saved scores but not edit.

- **HTTP 422 — Score for 'X' must be between 0 and 100 (got Y)**

  Fix: Correct the specific row identified in the error and resubmit.

4. Lock Tech or Commercial envelope

When to use: All evaluators have scored. Lock prevents further edits.

Steps

99. In the Evaluation tab, click **LOCK TECHNICAL** or **LOCK COMMERCIAL**.
100. Confirm the lock (irreversible).

Expected result: Green toast: 'Envelope locked'. Backend stores locked_at + locked_by. All subsequent score submissions on this envelope return HTTP 409.

Controls & fields

- **Lock button:** One per envelope. Bug #52: guards score endpoint too.

Common errors & fixes

- **HTTP 409 — Envelope already locked**

  Fix: Nothing to do — proceed to Award Report generation.

5. Generate the Award Report

When to use: After both envelopes are locked and all scores are in.

Steps

101. Click **GENERATE AWARD REPORT**.
102. The report renders inline: bid-by-bid technical + commercial totals, weighted score, ranking.
103. Download as PDF via the print icon.

Expected result: Recommendation row: bid_ref + vendor_name + total_score + rank. Master Admin uses this to trigger the Award step in the Awards & POs panel.

Controls & fields

- **Print / PDF:** WeasyPrint server-side render — includes audit trail + signatures.

Common errors & fixes

- **Missing scores warning — Not all bids have technical + commercial scores**

  Fix: Return to Score Bid and fill missing rows before generating the final report.

Corrigenda

Surface: admin

URL path: /admin?tab=corrigenda

Purpose: Amendments to published notices — see admin-notices Corrigenda action.

Content in progress — see Phase 2 (this module's actions will be authored in the next batch).

Tender Builder

Surface: admin

URL path: /admin?tab=tender-builder

Purpose: Template-driven notice creation with clone / clauses / attachments.

Content in progress — see Phase 2 (this module's actions will be authored in the next batch).

Awards & POs

Surface: admin

URL path: /admin?tab=awards

Purpose: Contract award + PO issuance from evaluated bids.

Content in progress — see Phase 2 (this module's actions will be authored in the next batch).

DocuSign

Surface: admin

URL path: /admin?tab=docusign

Purpose: Contract e-signature envelopes (JWT Grant flow).

Content in progress — see Phase 2 (this module's actions will be authored in the next batch).

Reverse Auctions

Surface: admin

URL path: /admin?tab=auctions

Purpose: Live reverse-auction rooms with real-time bidding.

Content in progress — see Phase 2 (this module's actions will be authored in the next batch).

Meetings

Surface: admin

URL path: /admin?tab=meetings

Purpose: Zoom-backed pre-bid, technical, commercial meetings.

Content in progress — see Phase 2 (this module's actions will be authored in the next batch).

L1 Comparison

Surface: admin

URL path: /admin?tab=l1

Purpose: Side-by-side ranked bid comparison — L1/L2/L3 across commercial values.

Content in progress — see Phase 2 (this module's actions will be authored in the next batch).

BOQ & Contracts

Surface: admin

URL path: /admin?tab=boq

Purpose: Bill of Quantities editor + contract tie-back.

Content in progress — see Phase 2 (this module's actions will be authored in the next batch).

Vendor Intel

Surface: admin

URL path: /admin?tab=vintel

Purpose: Vendor ratings, watch-list, blacklist. Bug #84: horizontal scroll wrapper.

Content in progress — see Phase 2 (this module's actions will be authored in the next batch).

Masters

Surface: admin

URL path: /admin?tab=masters

Purpose: Reference data — sectors, entity types, license codes, country meta.

Content in progress — see Phase 2 (this module's actions will be authored in the next batch).

Permissions

Surface: admin

URL path: /admin?tab=permissions

Purpose: Role-to-capability matrix + admin user seat management.

Content in progress — see Phase 2 (this module's actions will be authored in the next batch).

Packages

Surface: admin

URL path: /admin?tab=packages

Purpose: Kazakhstan Integrated Development Programme work packages tracker.

Content in progress — see Phase 2 (this module's actions will be authored in the next batch).

Audit

Surface: admin

URL path: /admin?tab=audit

Purpose: Immutable audit trail — filter by actor / entity / time / event.

Content in progress — see Phase 2 (this module's actions will be authored in the next batch).

Product Catalog

Surface: admin

URL path: /admin?tab=catalog

Purpose: SaaS product catalogue + Stripe checkout wiring.

Content in progress — see Phase 2 (this module's actions will be authored in the next batch).

Engagements

Surface: admin

URL path: /admin?tab=engagements

Purpose: Consulting engagement + quote pipeline tracker.

Content in progress — see Phase 2 (this module's actions will be authored in the next batch).

Vendor Portal

Surface: vendor

URL path: /vendor

Purpose: Bidder-facing portal: login, dashboard, bid submission, EMD payment, e-signatures, GDPR export.

Content in progress — see Phase 2 (this module's actions will be authored in the next batch).

Staff Portal

Surface: staff

URL path: /staff

Purpose: Multi-role staff surface (Escrow / Certifier / Legal / Accounting / Committee).

Content in progress — see Phase 2 (this module's actions will be authored in the next batch).

Registration Portal

Surface: registration

URL path: /register

Purpose: Multi-step supplier onboarding (Section A → E) with document uploads and resume tokens.

Content in progress — see Phase 2 (this module's actions will be authored in the next batch).

Public Notice Board

Surface: public

URL path: /

Purpose: Anonymous browsing of open tender notices with filters (type / country).

Content in progress — see Phase 2 (this module's actions will be authored in the next batch).

Committee Accept Portal

Surface: magic

URL path: /committee-accept/

Purpose: External committee invitees accept/decline via magic-link (no login required).

Content in progress — see Phase 2 (this module's actions will be authored in the next batch).

Escrow Officer Portal

Surface: magic

URL path: /escrow/officer/

Purpose: External escrow trustees sign releases via magic-link (Bug #9c workflow).

Content in progress — see Phase 2 (this module's actions will be authored in the next batch).
