- Account & security
- Alerts

Chapter 4 — Mobile experience

- Mobile — Supplier home
- Mobile — My Bids
- Mobile — Bidding operations
- Mobile — Admin Vendors

Chapter 1 — Public & onboarding

Public landing page

The marketing home visitors see at pmcmanagers.com. The hero links straight through to the live tender board, the registration flow and both role sign-ins.

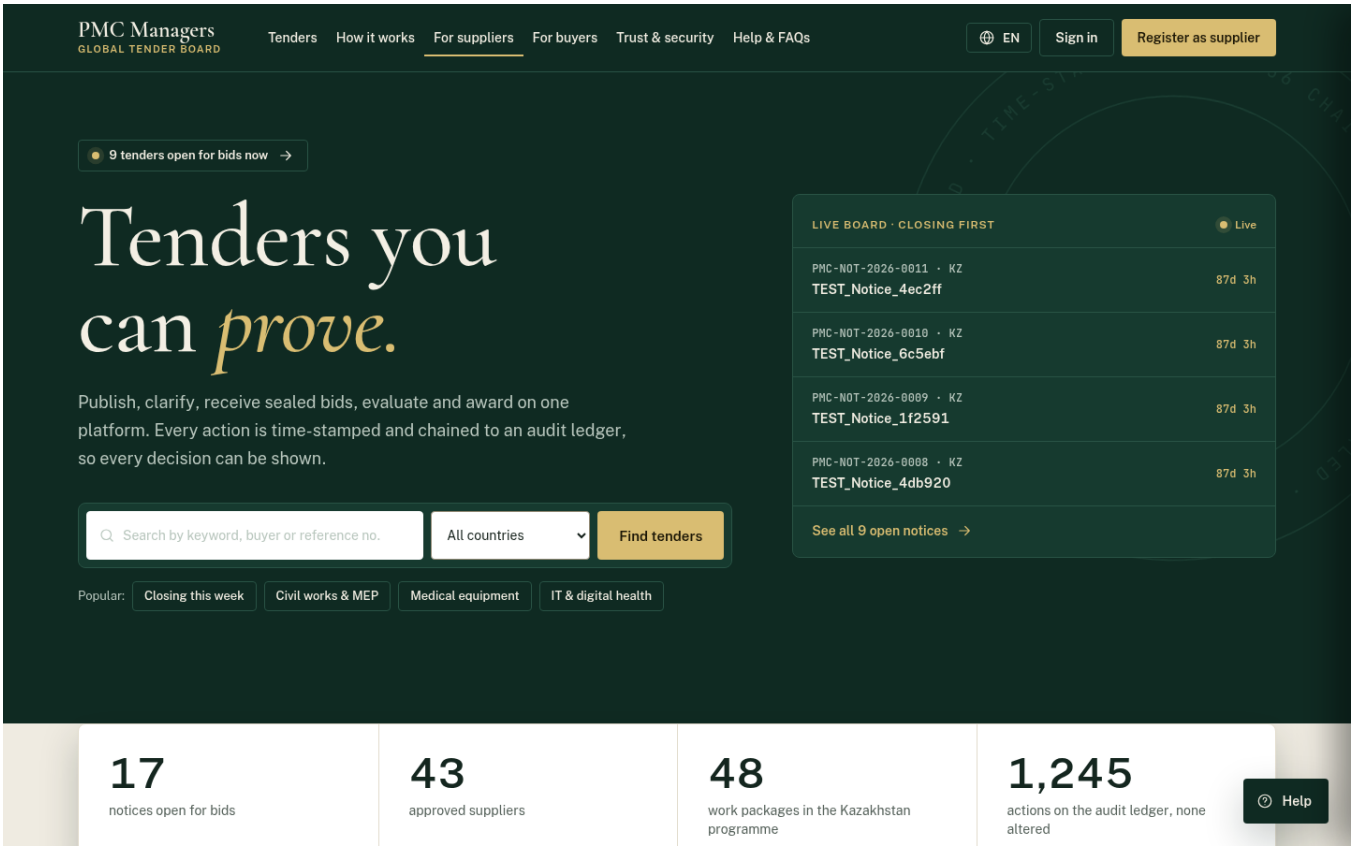

Figure: Public landing page · screenshot captured 05 Oct 2026 from the v51u build.

Public tender board

Open tender listing — anyone can filter by sector, deadline, EMD band or region. Clicking a tile opens the public notice detail, with 'Register & bid' pulling the user into onboarding.

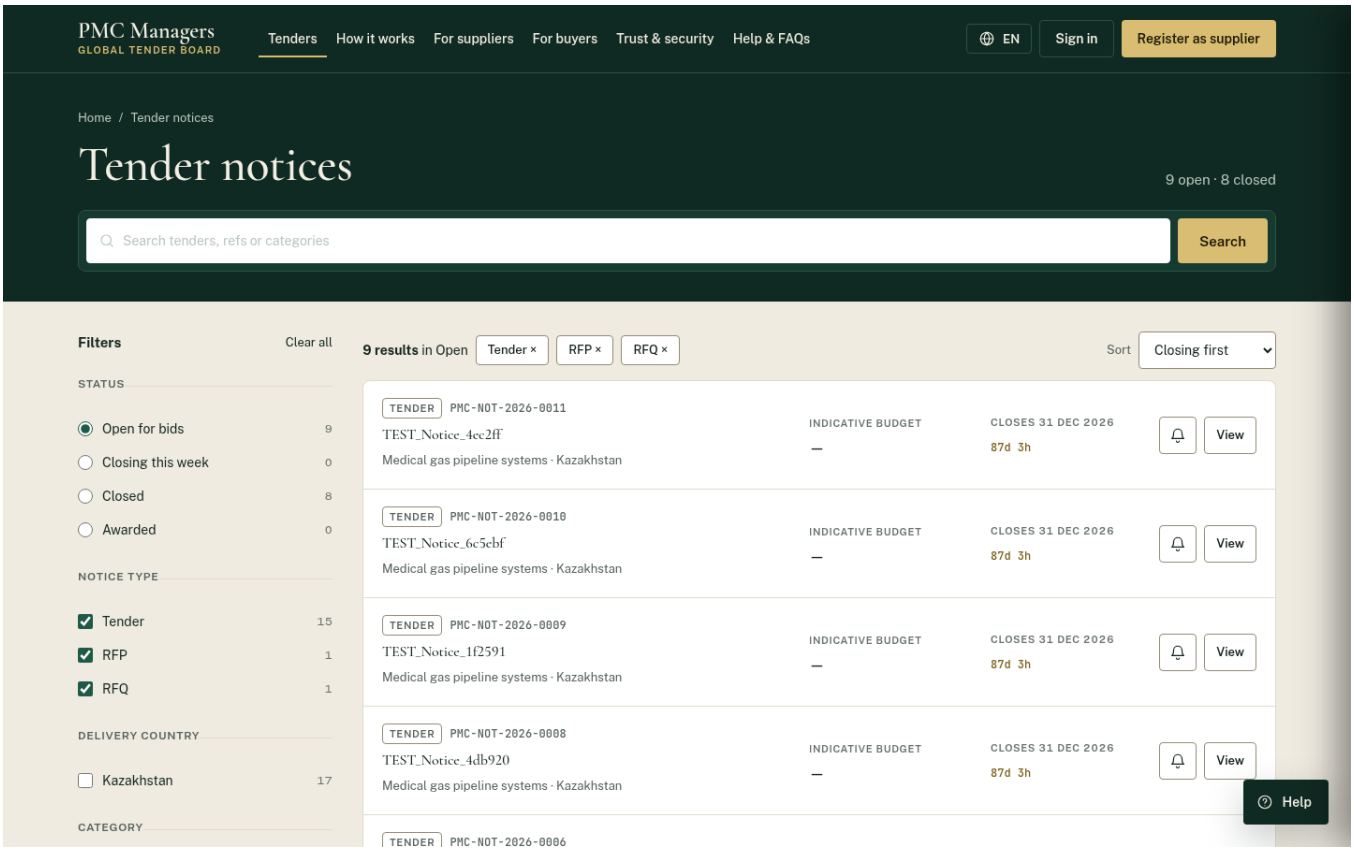

Figure: Public tender board · screenshot captured 05 Oct 2026 from the v51u build.

Vendor registration — start

New supplier onboarding. All fields are KYC-validated client-side; the form posts to /api/v1/registrations which admins review in the Registrations panel.

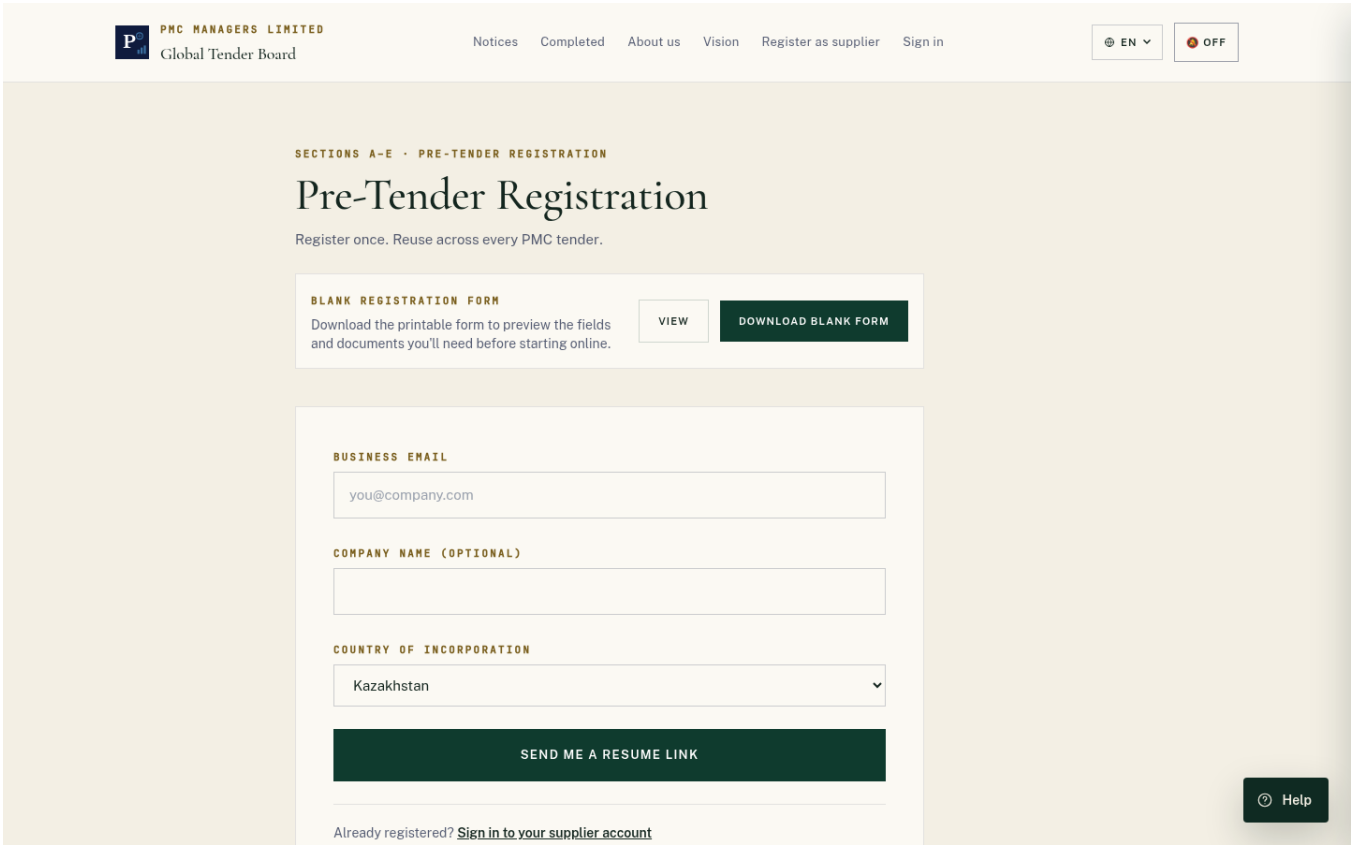

Figure: Vendor registration — start · screenshot captured 05 Oct 2026 from the v51u build.

Unified sign-in

The single sign-in gate for suppliers and staff. The role chip chooses the right dashboard after auth. Admin, staff and vendor each have a reset-password flow served from here.

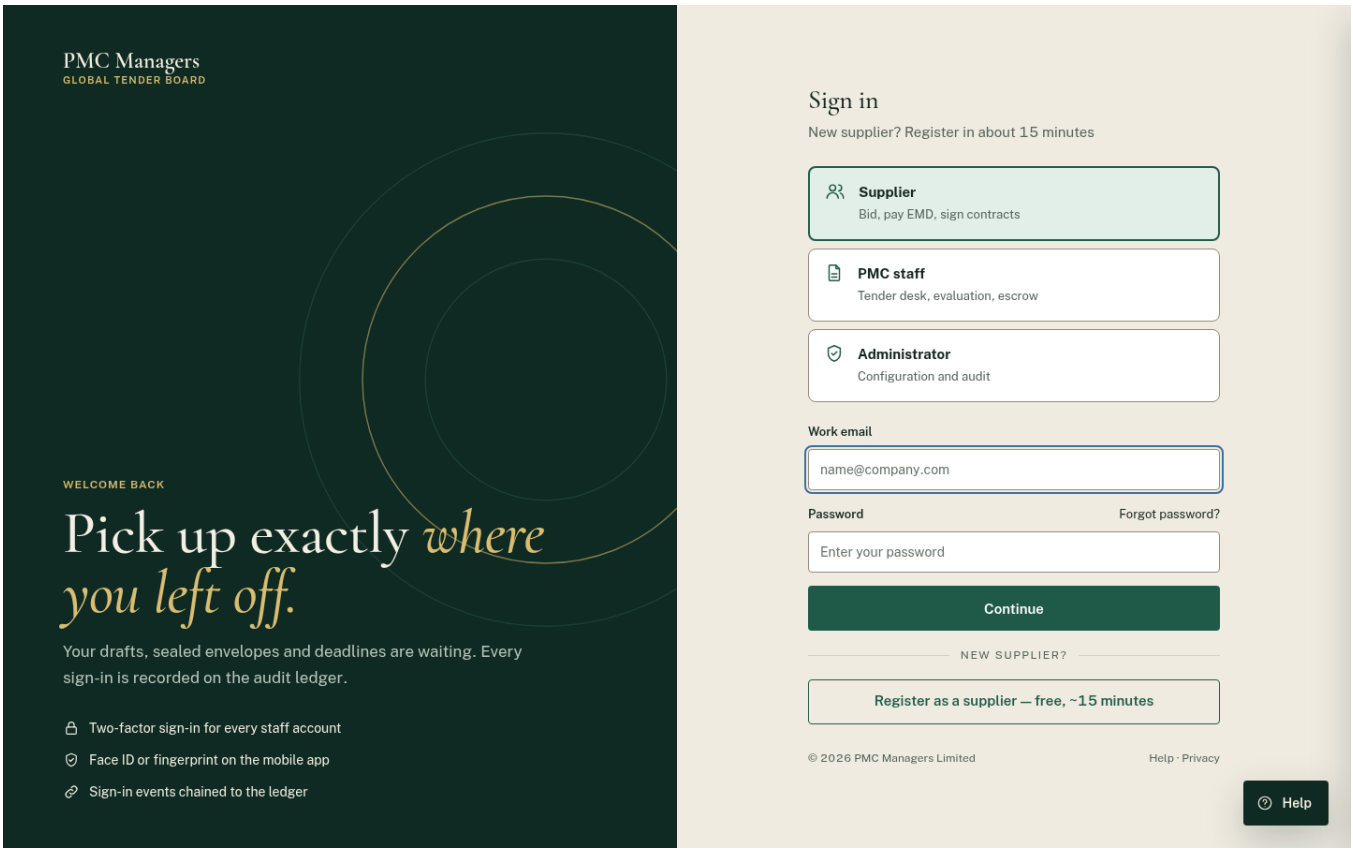

Figure: Unified sign-in · screenshot captured 05 Oct 2026 from the v51u build.

Admin sign-in

Dedicated admin login route. Returns an admin bearer token + CSRF token and gates every /api/v1/admin/* endpoint behind BOTH.

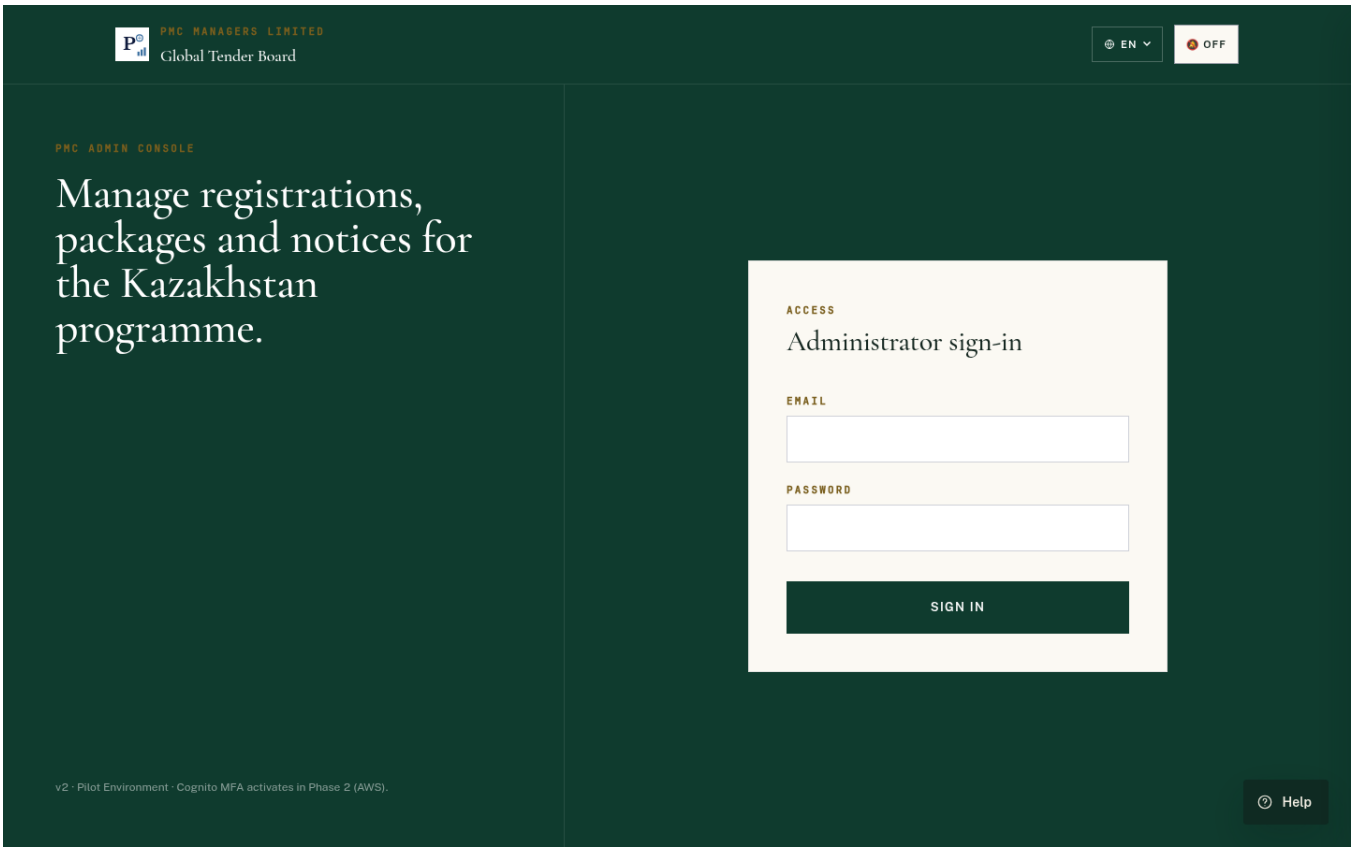

Figure: Admin sign-in · screenshot captured 05 Oct 2026 from the v51u build.

Chapter 2 — Admin console

Admin dashboard

The daily working view. Top KPIs: pending registrations, bids due today, EMD held, awards awaiting signature. 'Create' spawns new notices, tenders, meetings and events; the bell lists system alerts.

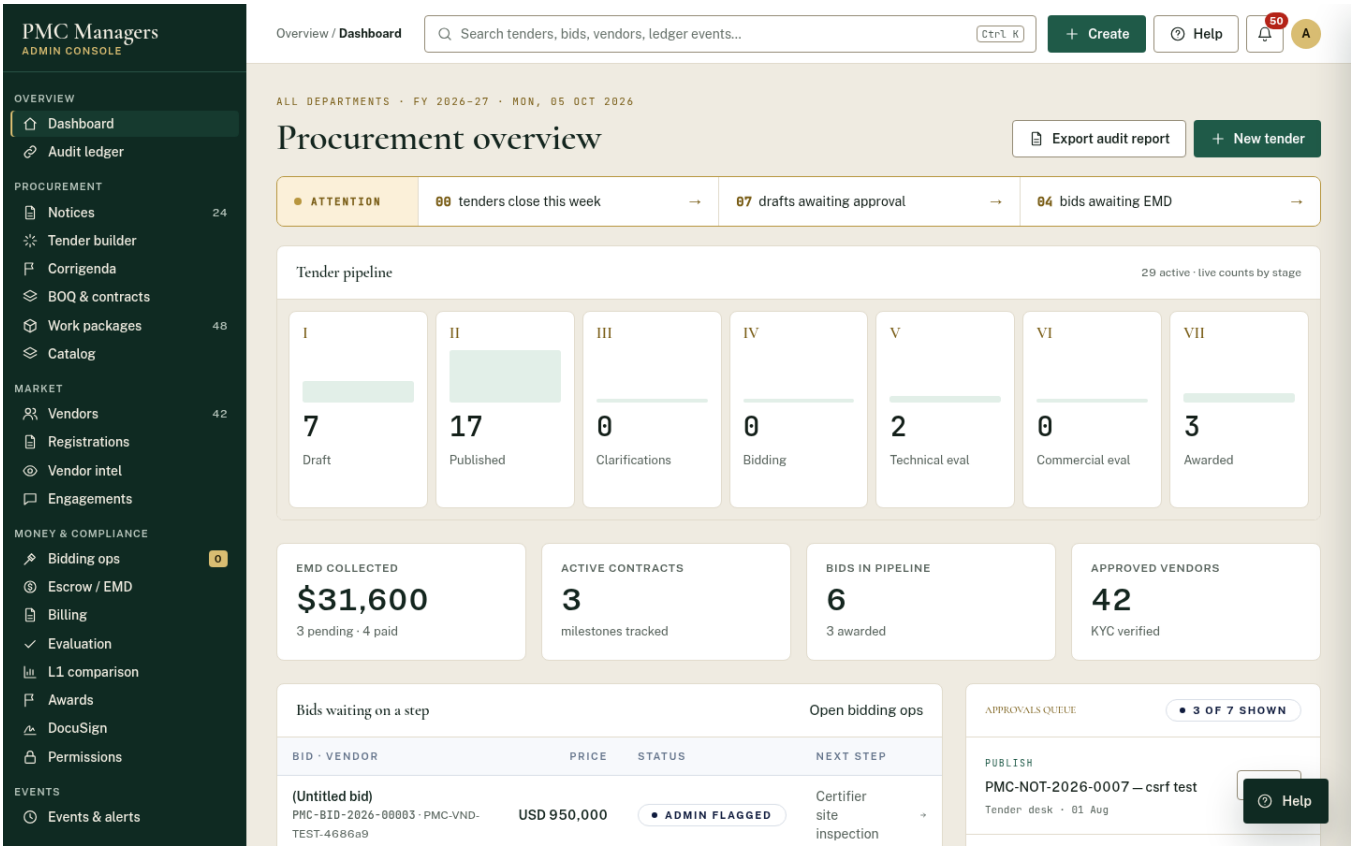

Figure: Admin dashboard · screenshot captured 05 Oct 2026 from the v51u build.

Vendors panel

Live supplier directory with status filters (active / inactive / suspended / rejected). Tapping a vendor opens the KPI + KYC detail inline on mobile, or in the right column on desktop. Bulk-invite and Add & fill forms sit above the list.

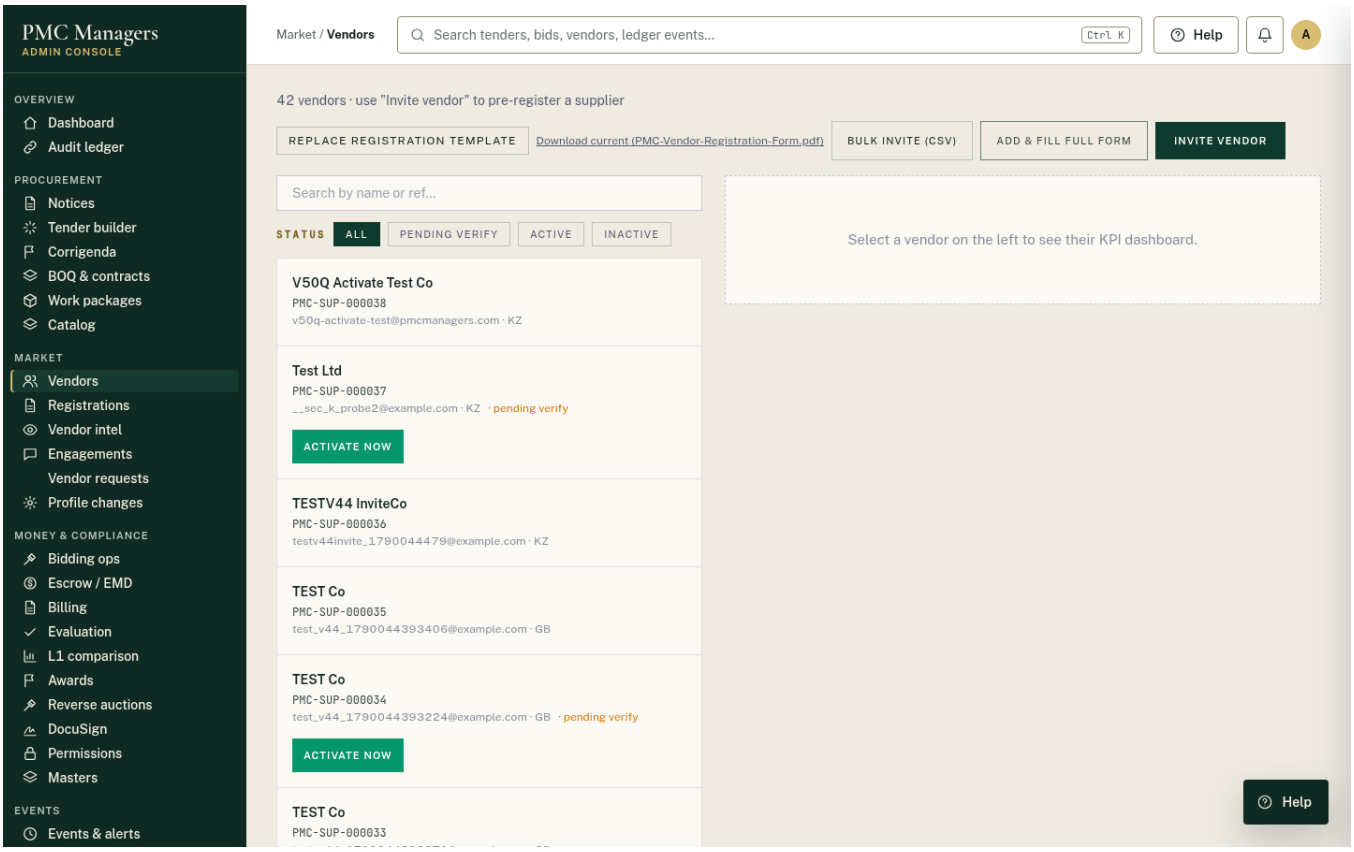

Figure: Vendors panel · screenshot captured 05 Oct 2026 from the v51u build.

Registrations review

Submitted / Approved / Clarify / Rejected tabs for incoming registrations. Mobile taps the row to open the review panel inline (approve / clarify / reject + notes). Reminders can be sent to stale submissions in one click.

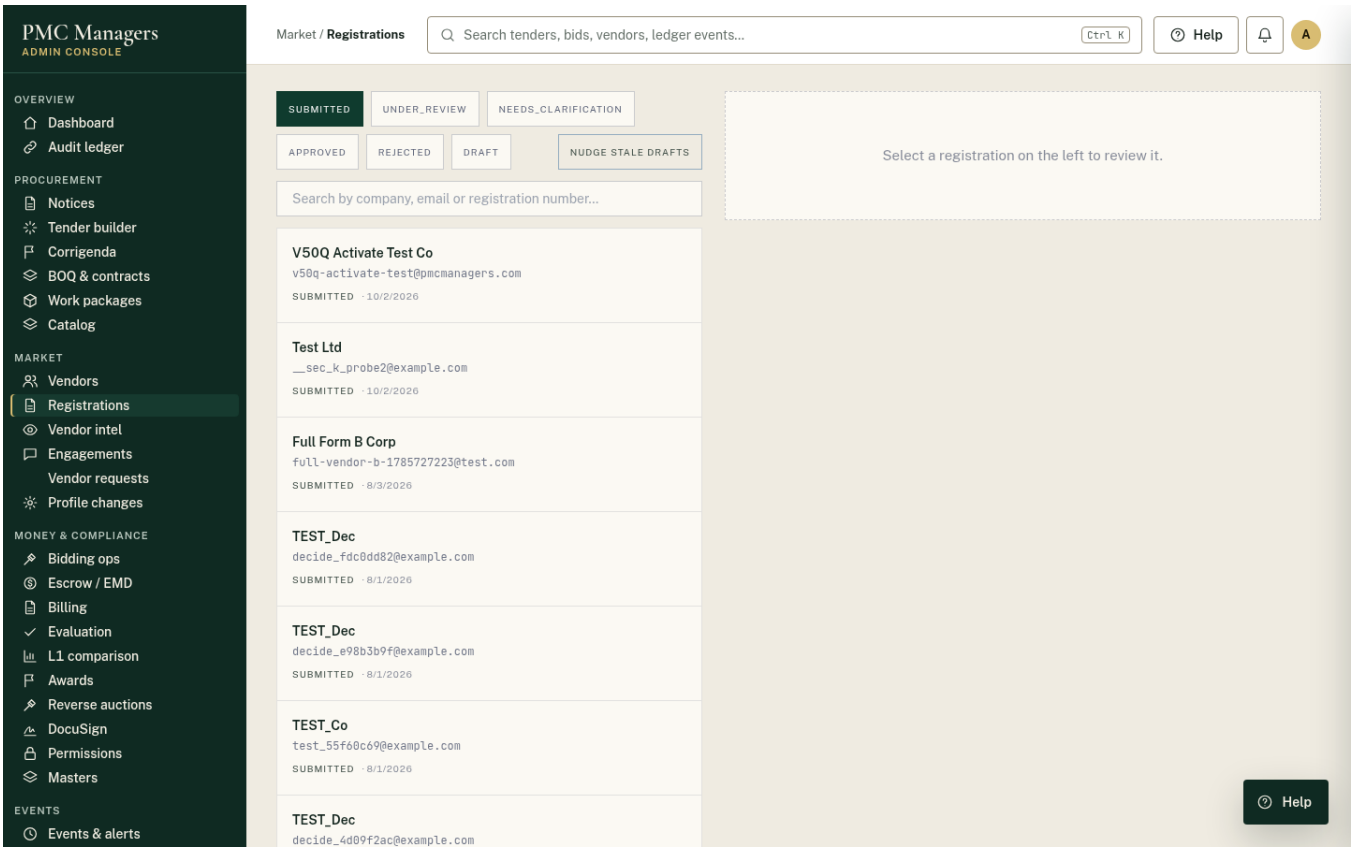

Figure: Registrations review · screenshot captured 05 Oct 2026 from the v51u build.

Notices

Standalone notices (independent of a tender) — public bulletins, corrigenda-less announcements, policy updates. Each row has reach + reads counters so comms can see what landed.

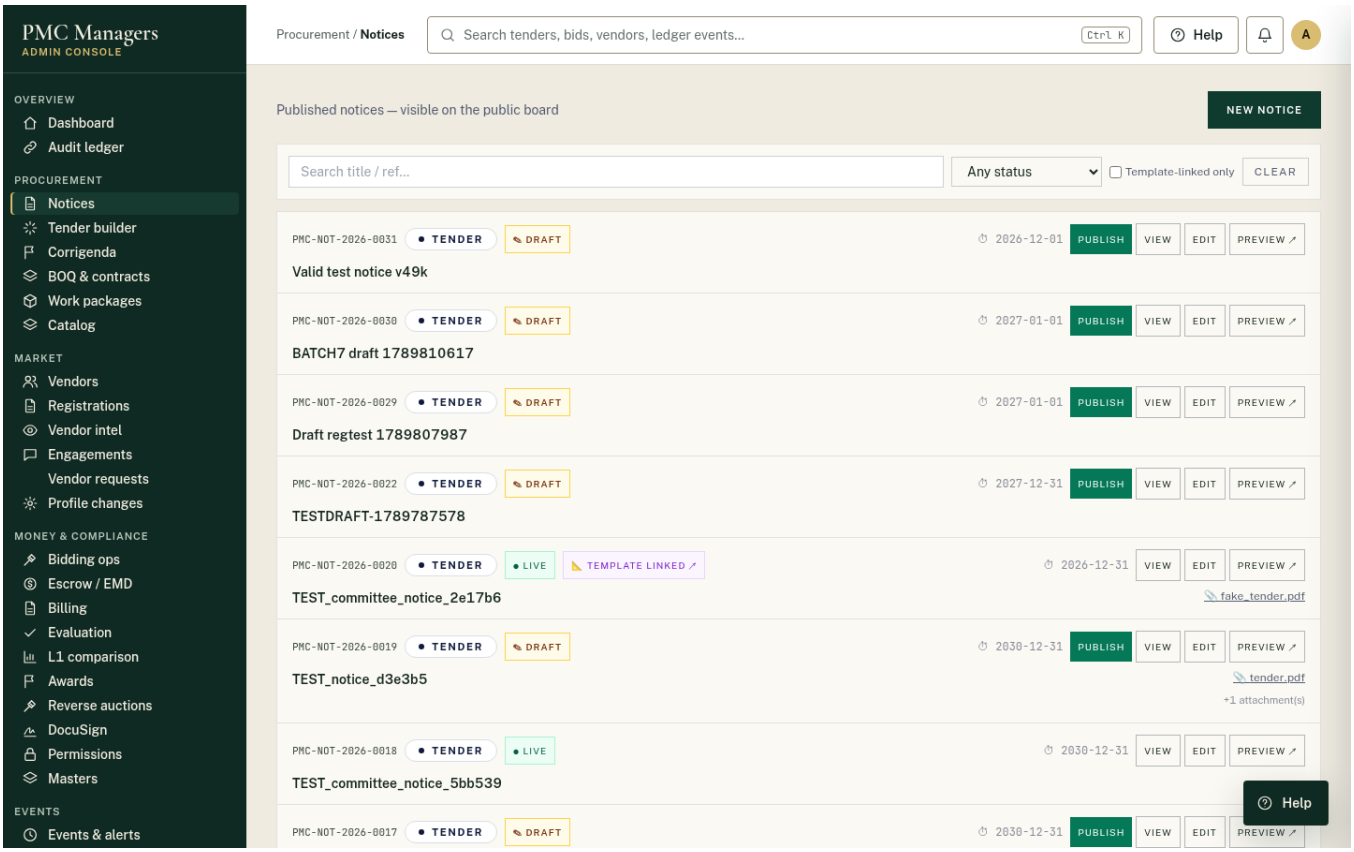

Figure: Notices · screenshot captured 05 Oct 2026 from the v51u build.

Tender builder

The multi-step wizard: header → covers → BOQ → clauses → preview → publish. Covers are versioned (1,2,3…), DPR extraction fills covers from PDFs, and 'AI draft' seeds clauses from the template library.

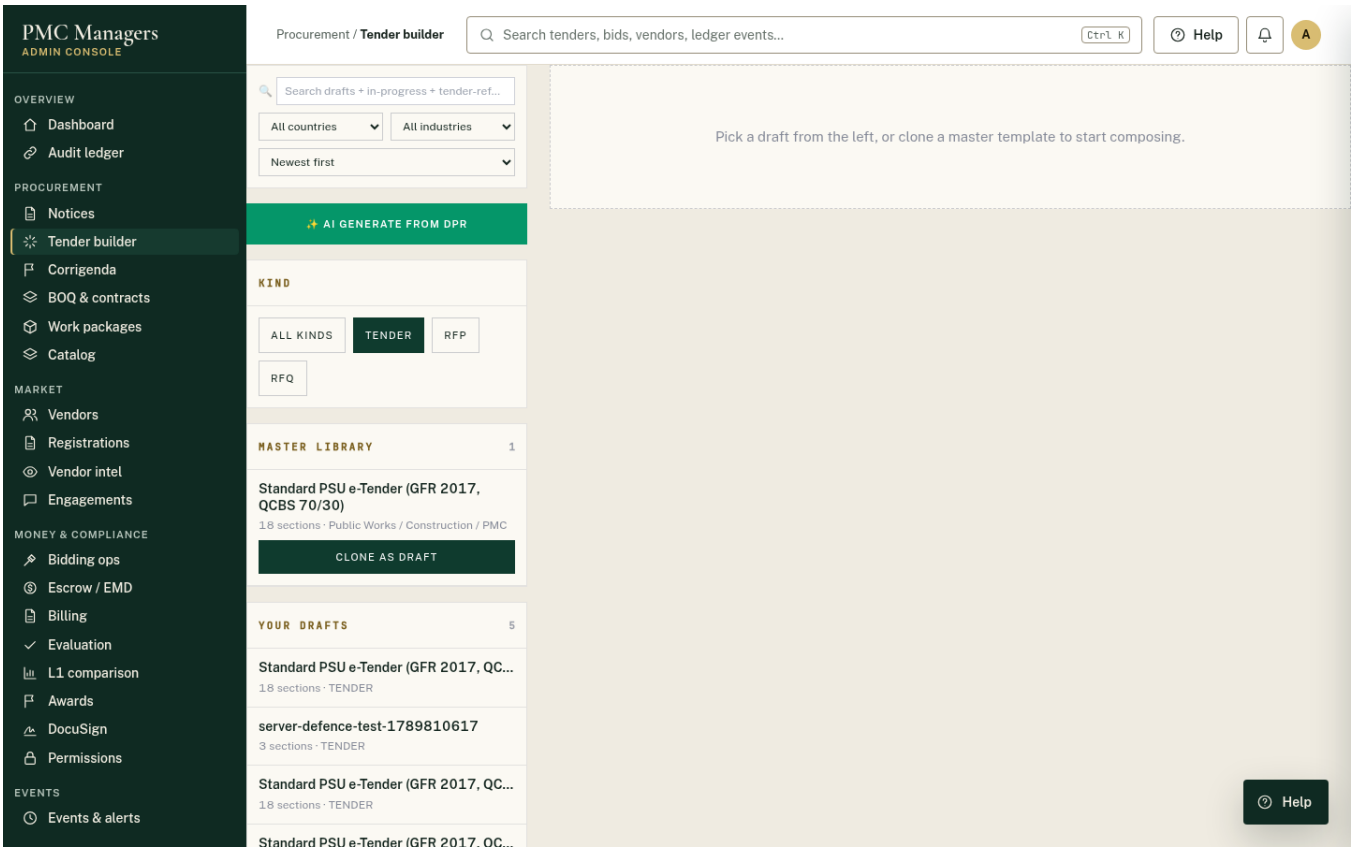

Figure: Tender builder · screenshot captured 05 Oct 2026 from the v51u build.

Corrigenda

Issue amendments to live tenders. Each corrigendum goes out as its own email + website banner and re-opens the clock when needed.

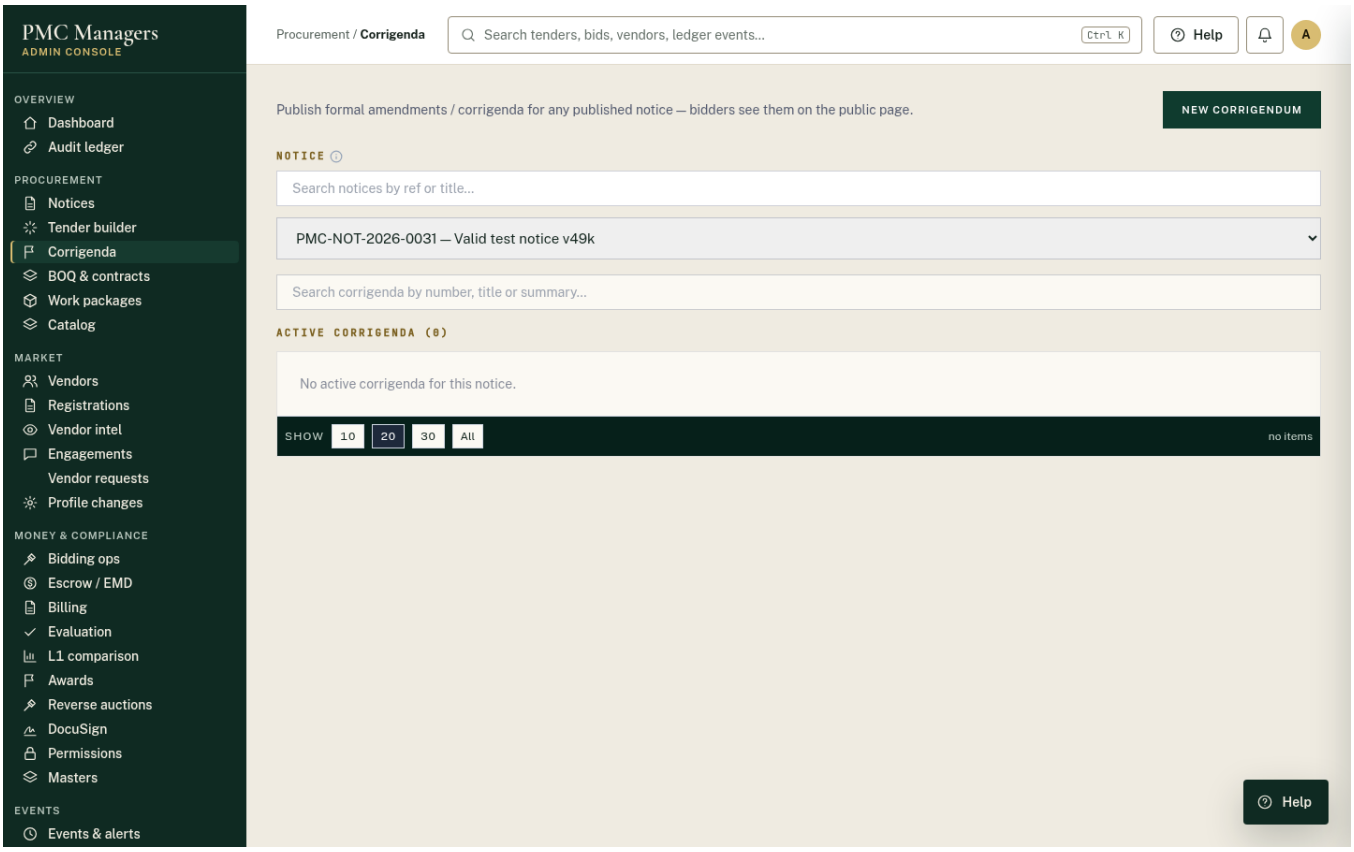

Figure: Corrigenda · screenshot captured 05 Oct 2026 from the v51u build.

BOQ library

Reusable Bill of Quantities items — line items with units, codes and ceiling rates. Attach a BOQ to any tender from the builder; vendors see rate columns tied to these items.

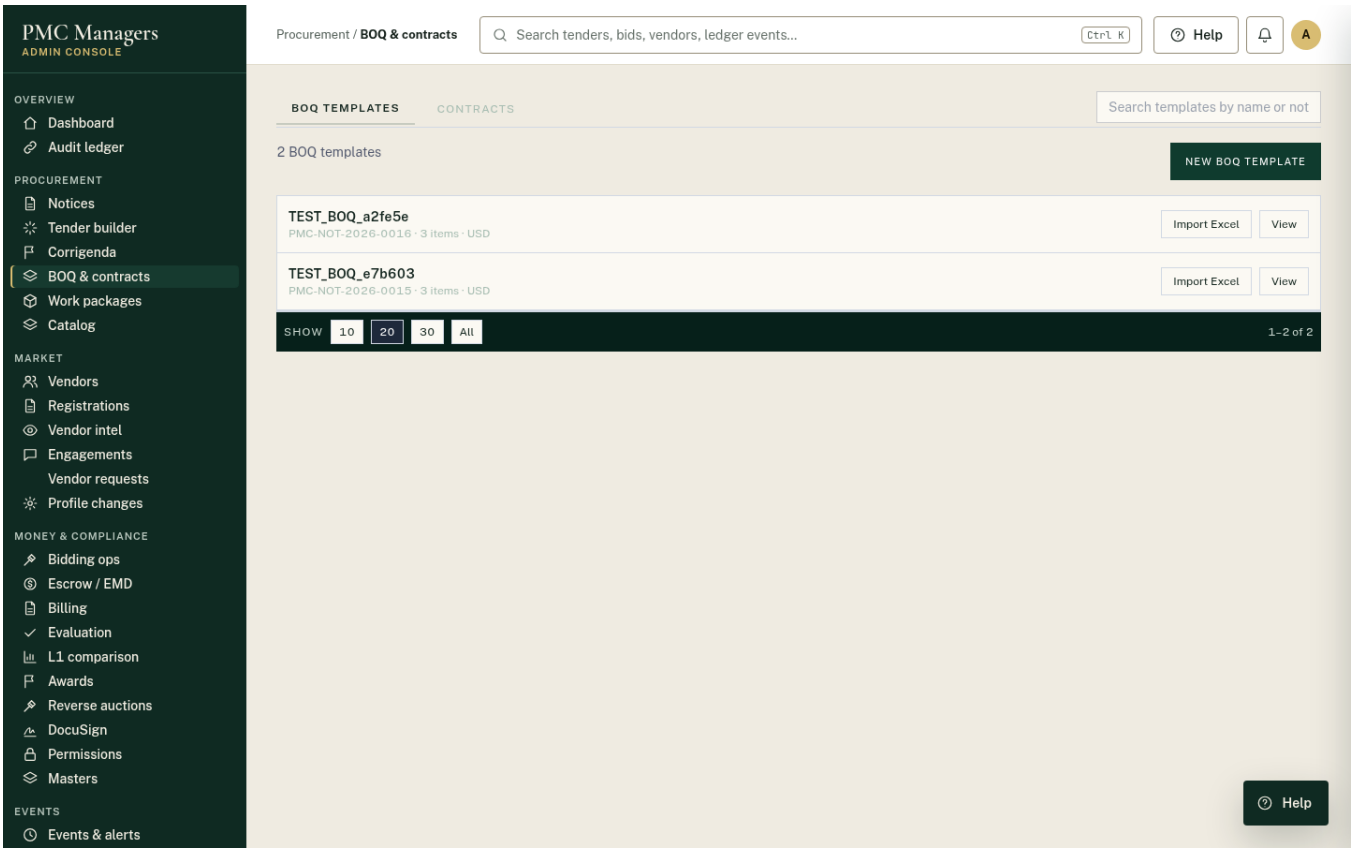

Figure: BOQ library · screenshot captured 05 Oct 2026 from the v51u build.

Work packages

Group of related tenders under a single master programme — useful for multi-package construction or framework procurement.

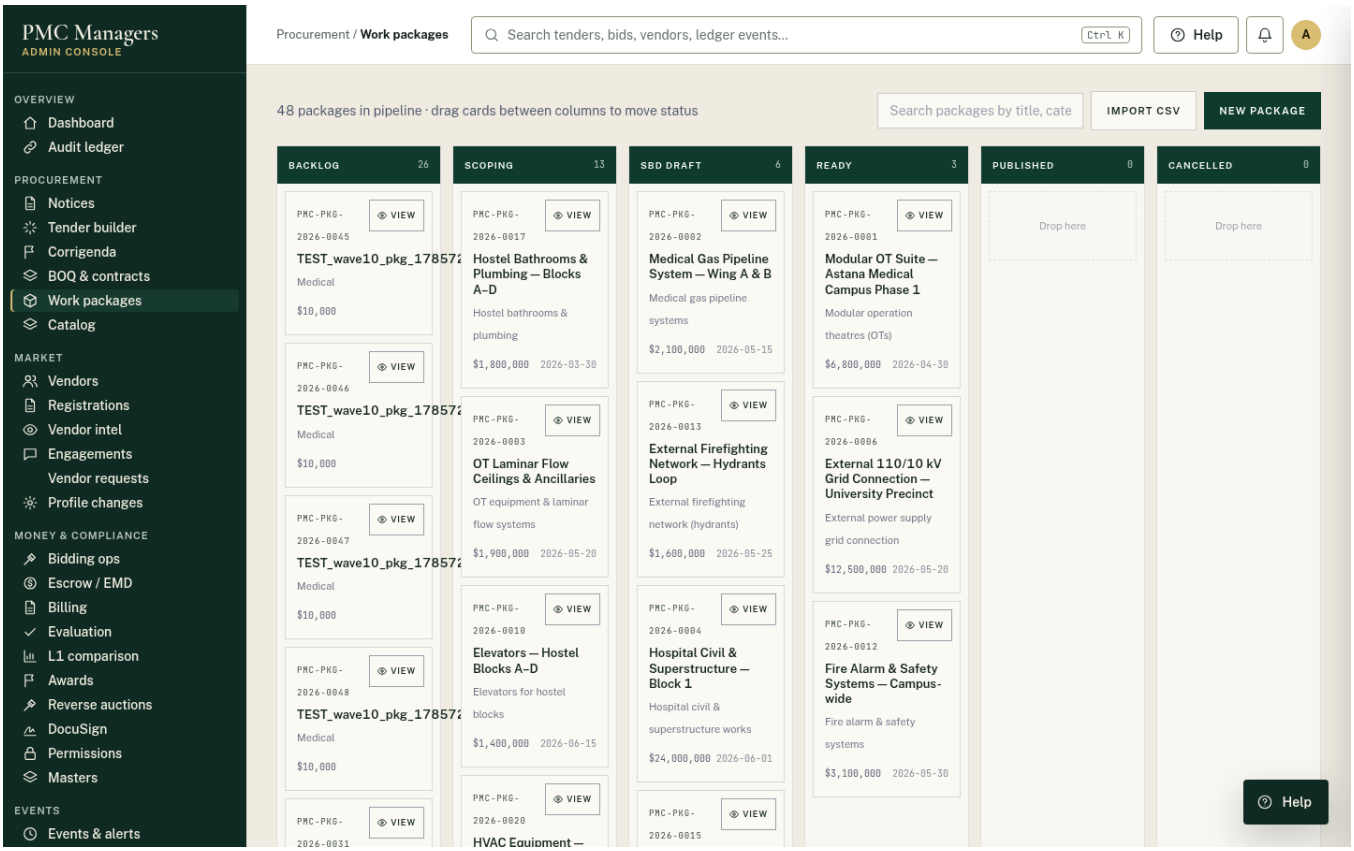

Figure: Work packages · screenshot captured 05 Oct 2026 from the v51u build.

Procurement catalogue

Searchable catalogue of standard goods and services. Driven by the Categories master; vendors self-select from here when registering.

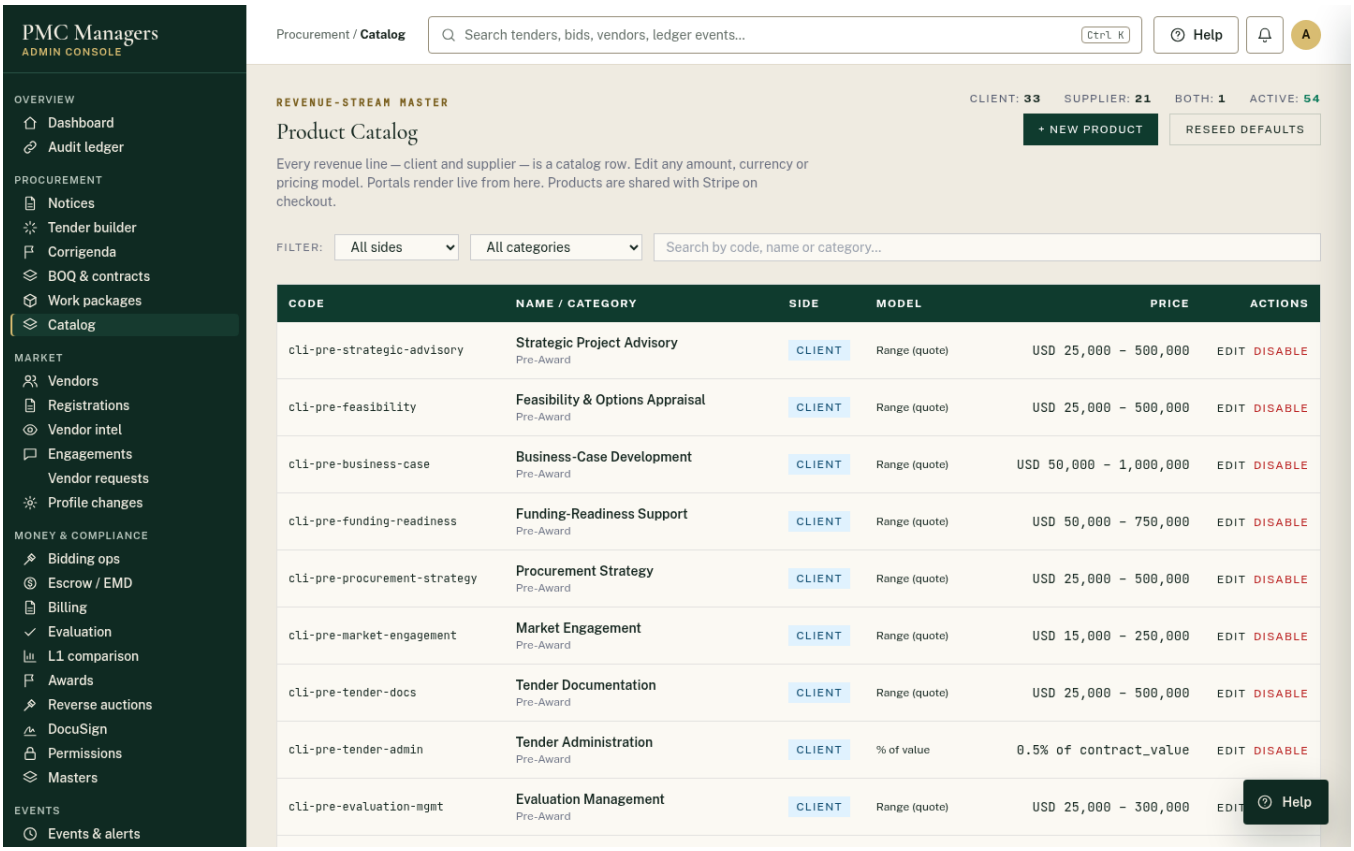

Figure: Procurement catalogue · screenshot captured 05 Oct 2026 from the v51u build.

Vendor intel

Risk and performance signals per vendor — past wins, award value, average turnaround, anomaly scores from the AI outlier detector.

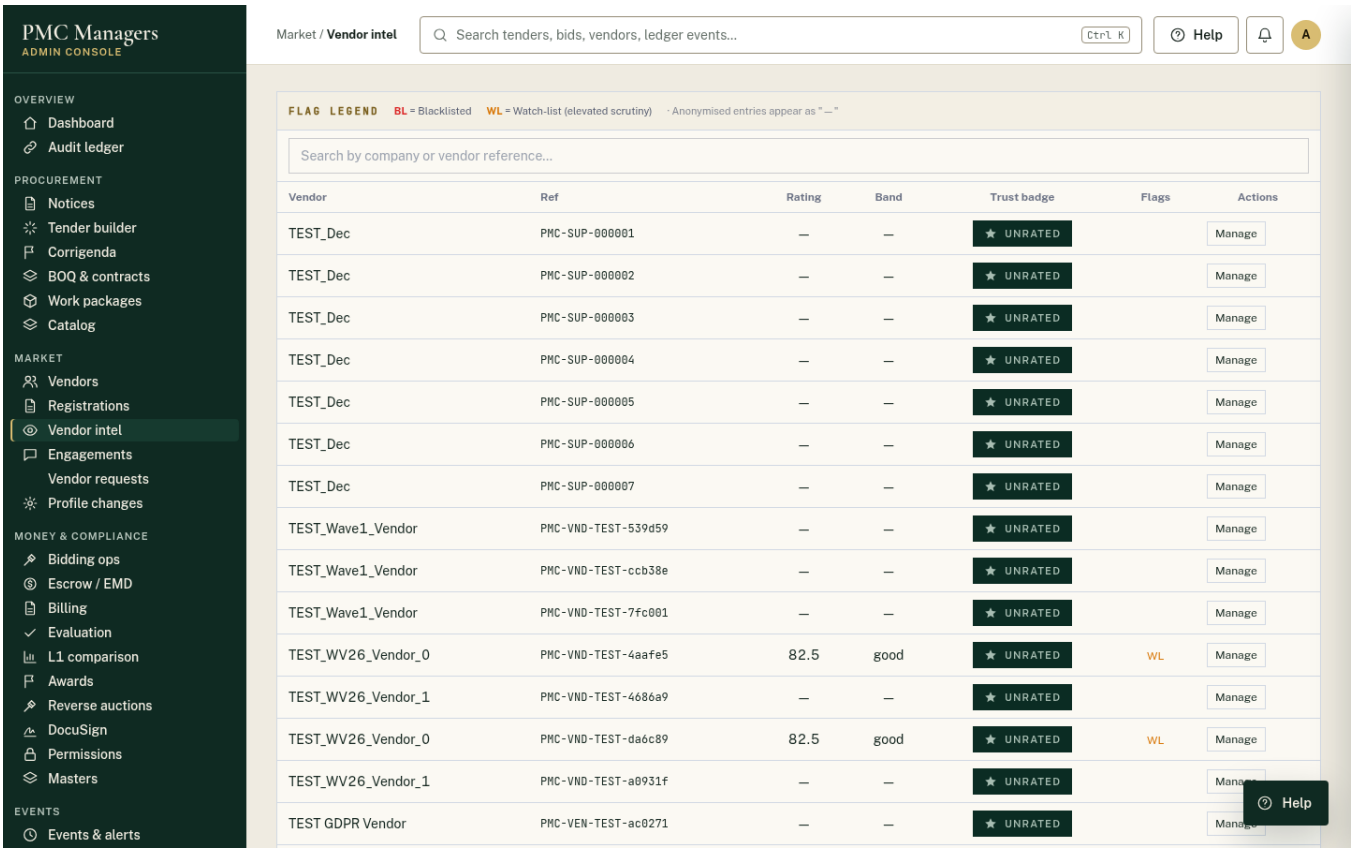

Figure: Vendor intel · screenshot captured 05 Oct 2026 from the v51u build.

Engagements

Vendor engagements tracker — pre-bid meetings, site visits, clarification windows. Each row logs who attended + when, with reminders out to assigned staff.

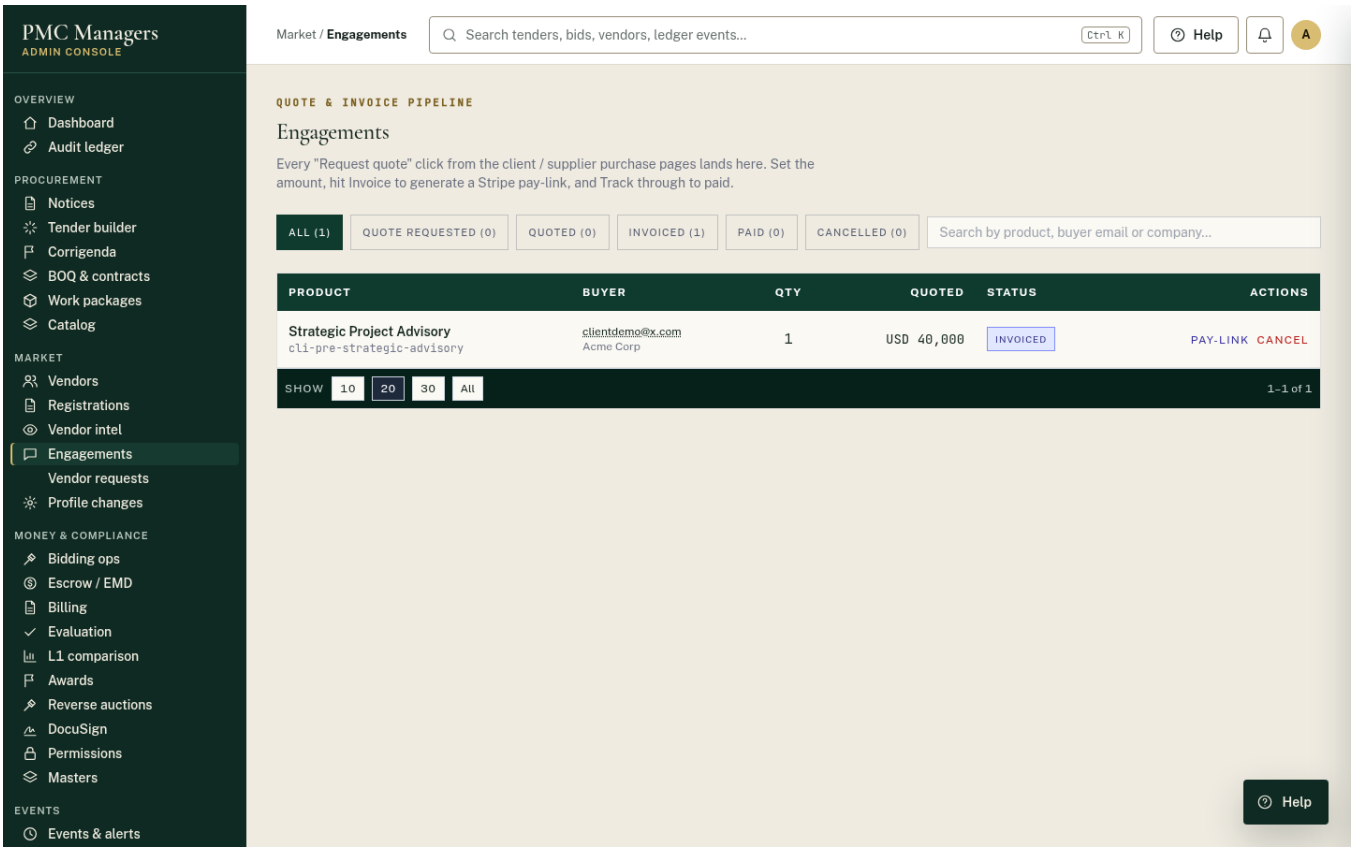

Figure: Engagements · screenshot captured 05 Oct 2026 from the v51u build.

Bidding operations

The daily bid-clearance desk. Tabs: Needs PMC / Waiting on supplier / Awarded / All. Counts always match the rows actually shown. Row cards expose EMD state, next step and the flow pipeline.

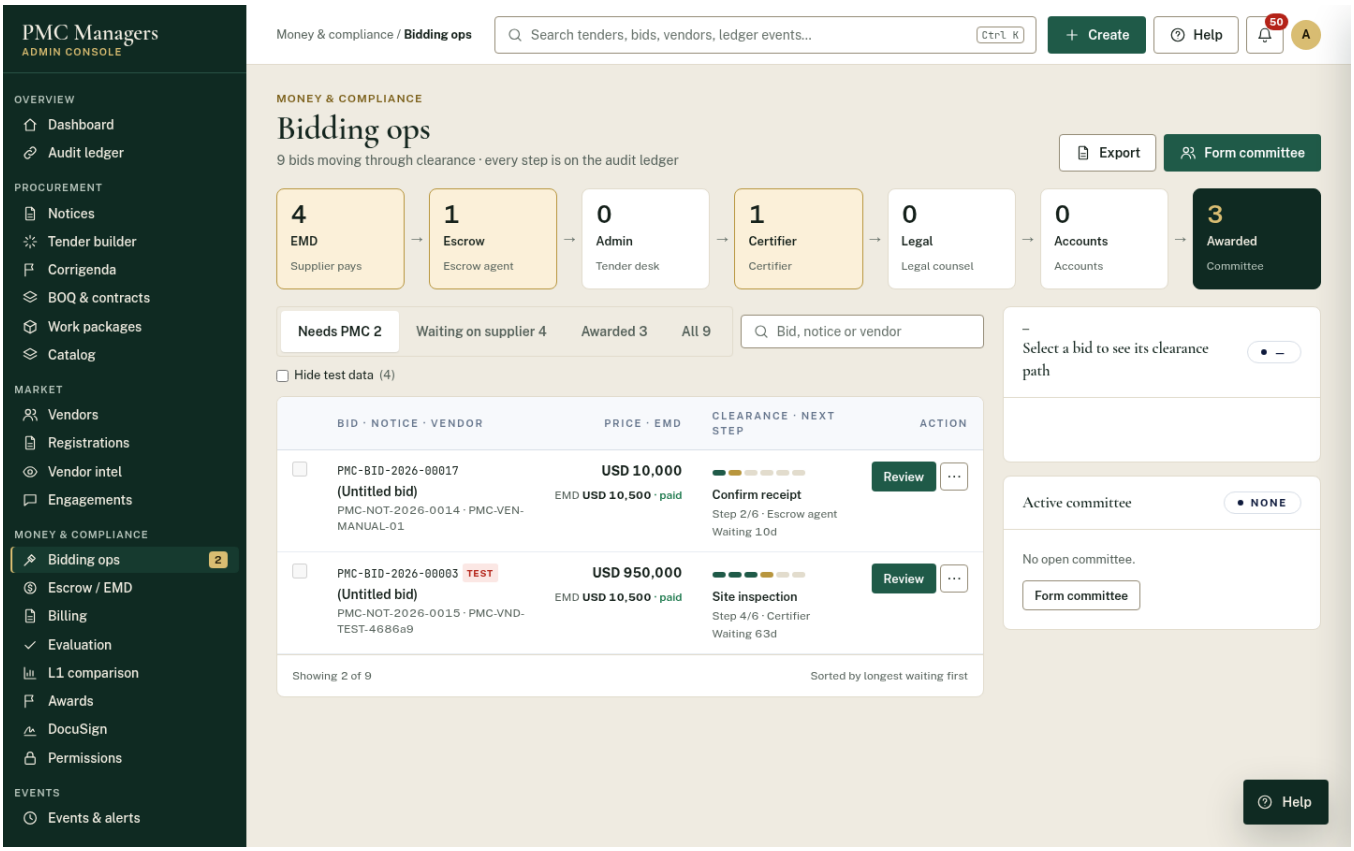

Figure: Bidding operations · screenshot captured 05 Oct 2026 from the v51u build.

Escrow

EMD held by the designated escrow agent — hold / release / forfeit per bid, with the escrow-agent role scoped to this panel.

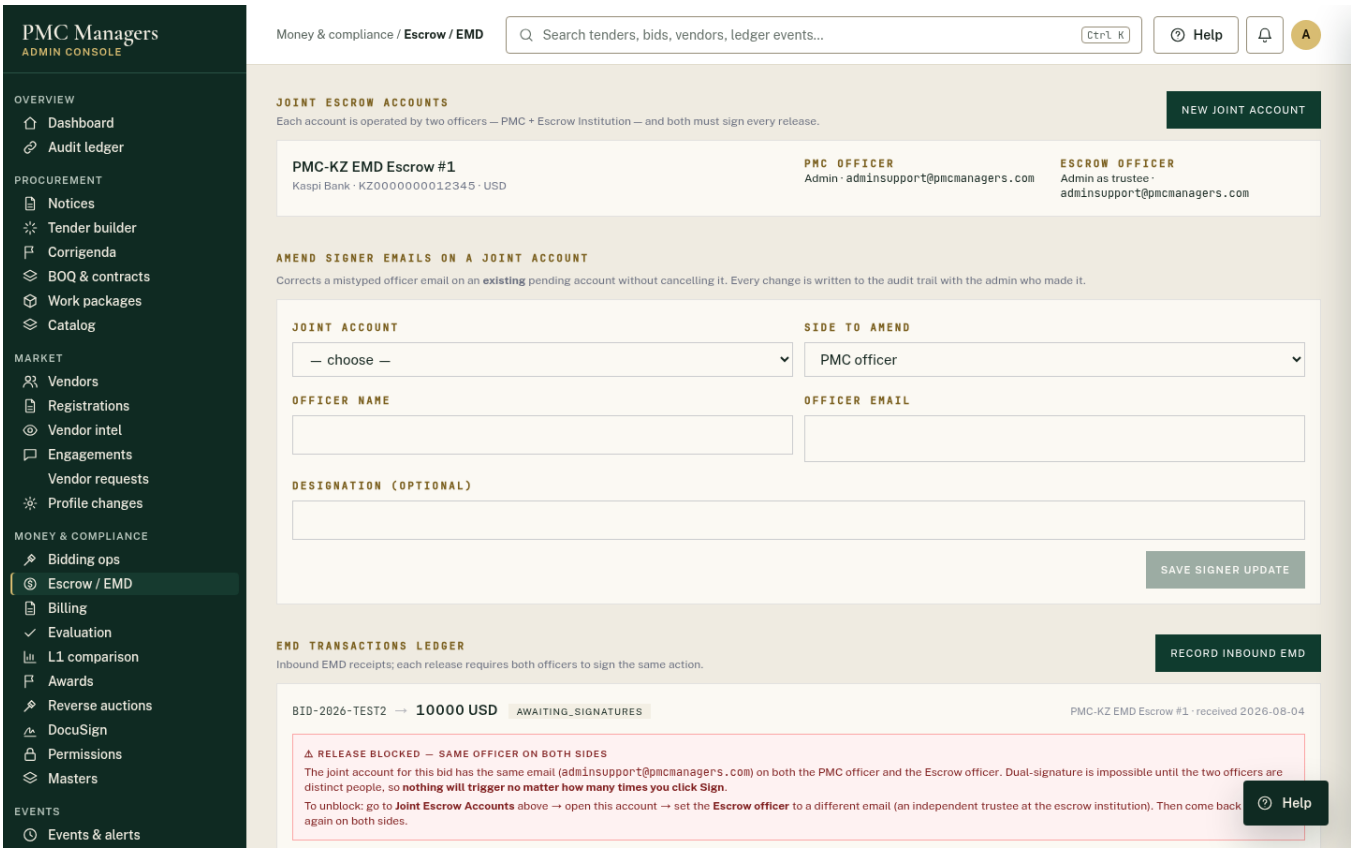

Figure: Escrow · screenshot captured 05 Oct 2026 from the v51u build.

Billing

PMC's own invoicing — platform access fees, bid-success surcharge, Stripe reconciliation and refunds.

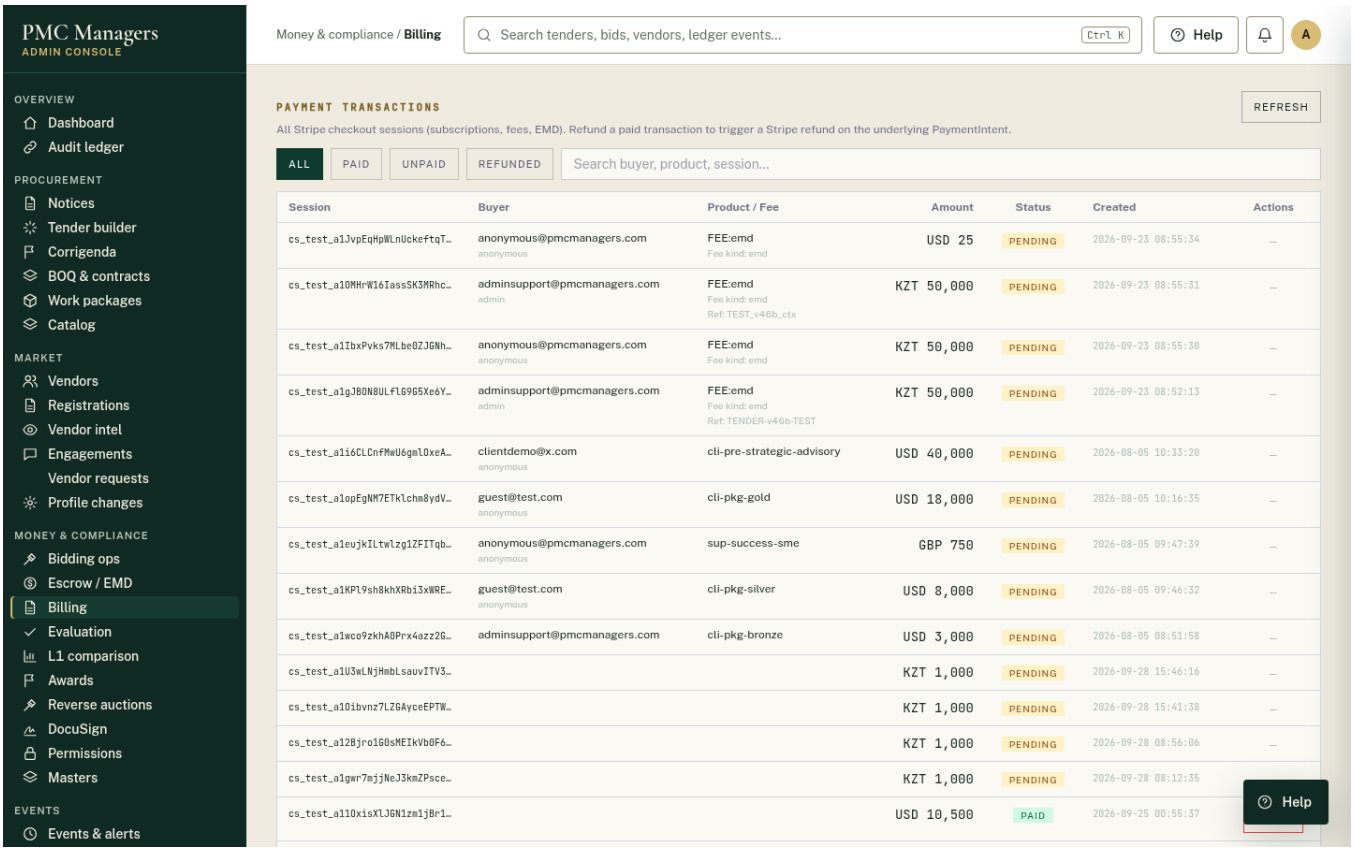

Figure: Billing · screenshot captured 05 Oct 2026 from the v51u build.

Evaluation

Score bids against the published evaluation matrix. Technical / commercial weights come from the tender header; the committee signs off scores from here.

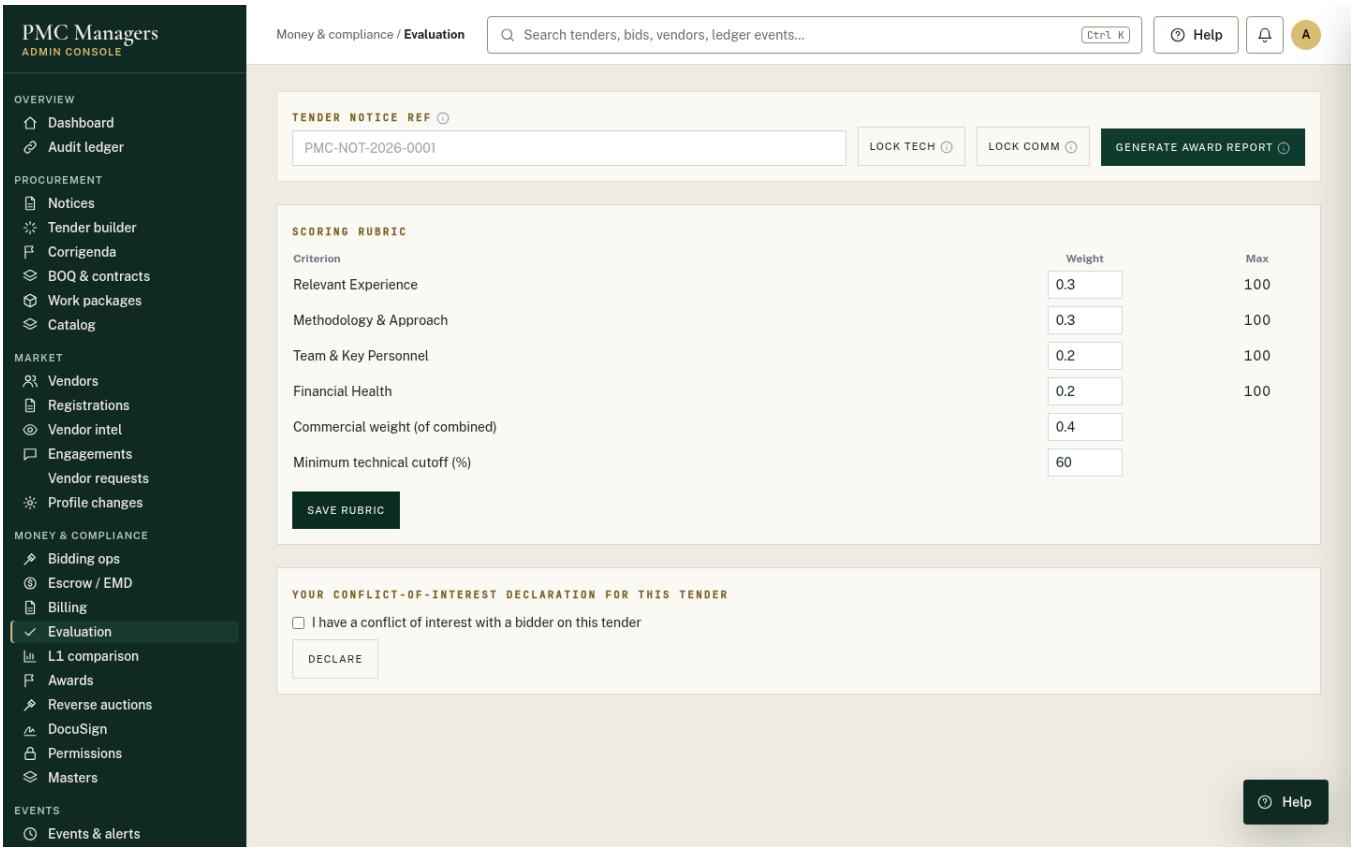

Figure: Evaluation · screenshot captured 05 Oct 2026 from the v51u build.

L1 shortlist

Lowest-evaluated-bid shortlist after technical qualification. Ties are highlighted and the committee's L1 pick flows into Awards.

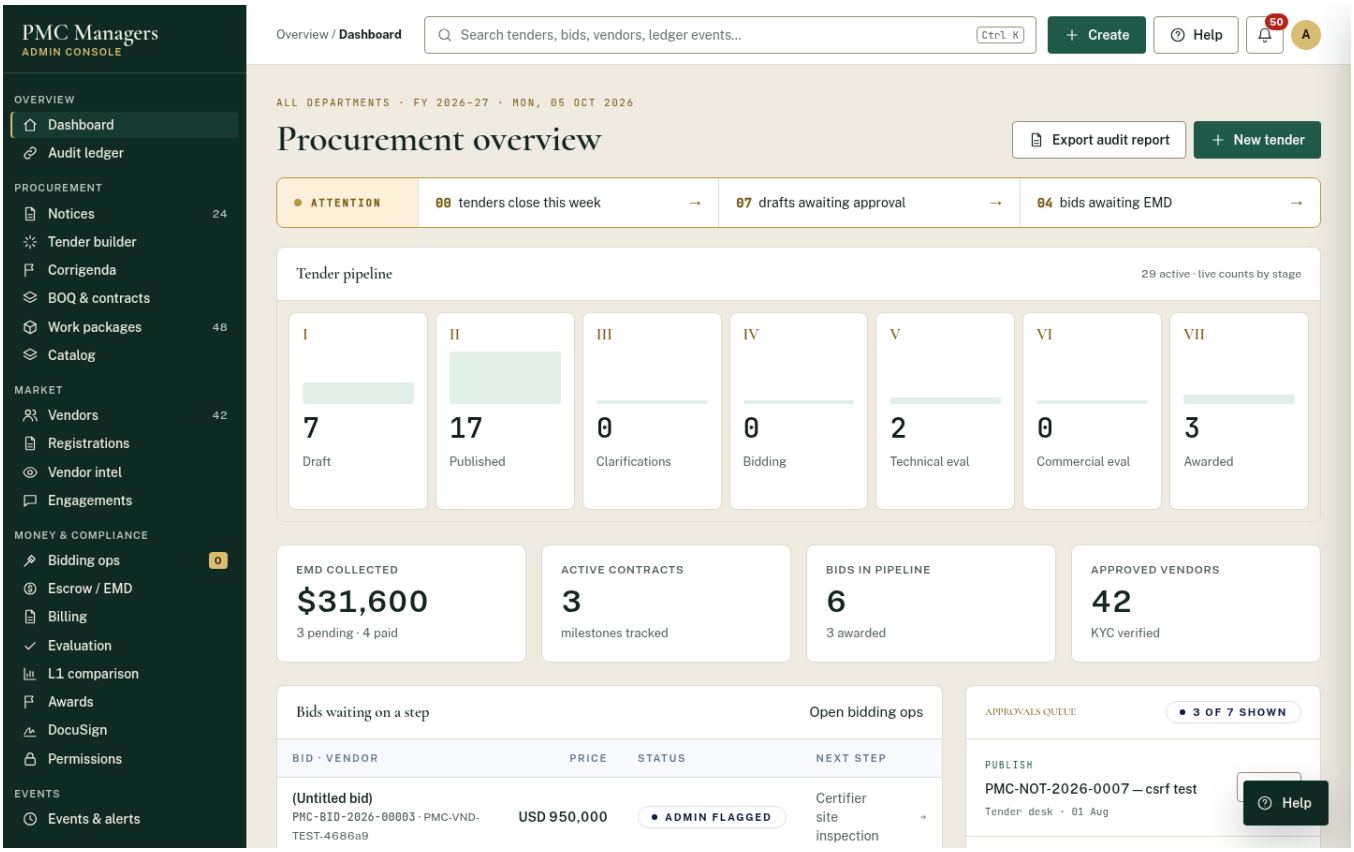

Figure: L1 shortlist · screenshot captured 05 Oct 2026 from the v51u build.

Awards & LOI

Issue Letter of Intent / Award. Pulls selected vendor + bid total, generates the award PDF, routes it to DocuSign and tracks acceptance.

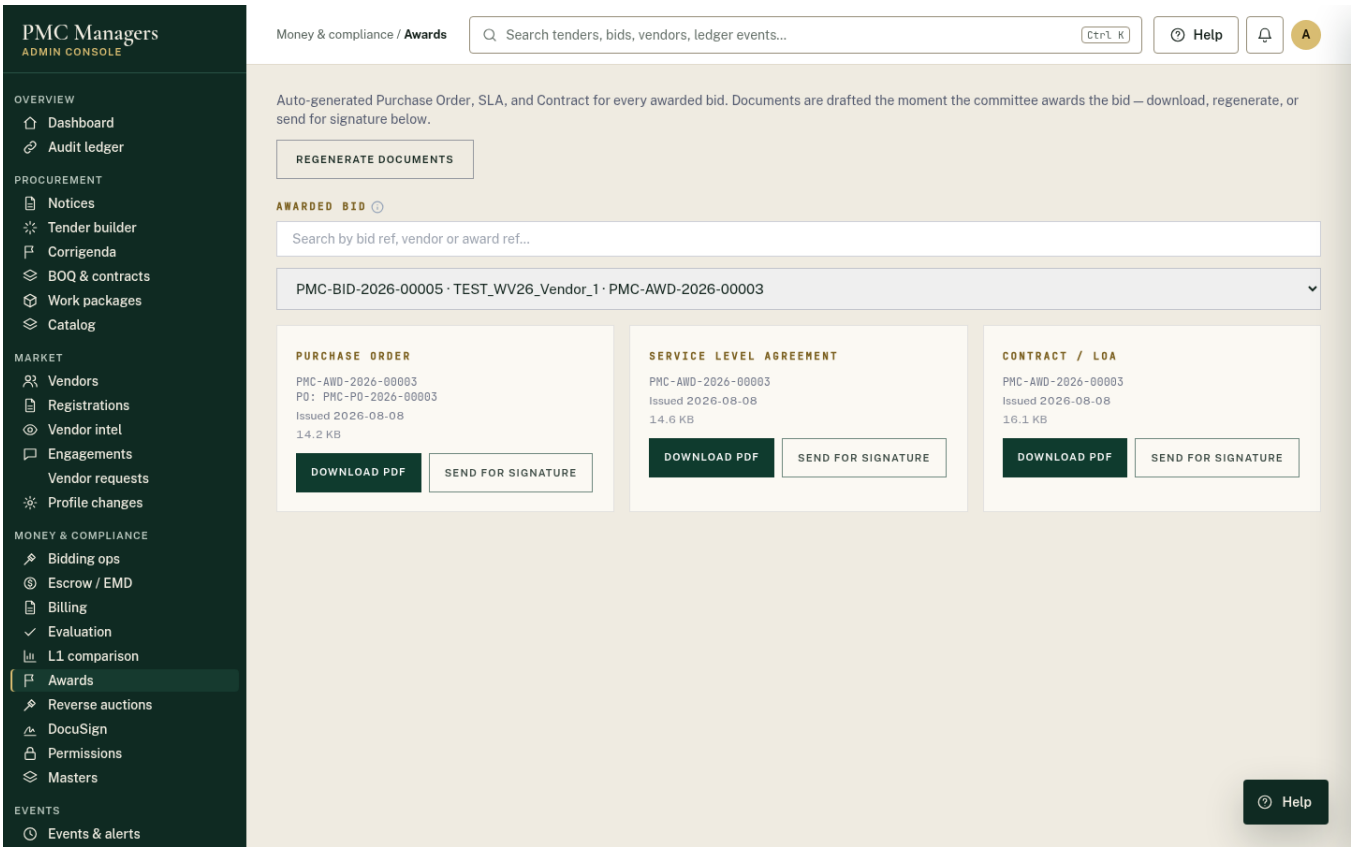

Figure: Awards & LOI · screenshot captured 05 Oct 2026 from the v51u build.

DocuSign operations

Admin view of every envelope: Draft / Sent / Delivered / Signed / Declined / Archived. Reassign, download the combined signed PDF, resend reminders. Preview DocuSign sandbox may return 424 upstream; production uses real credentials.

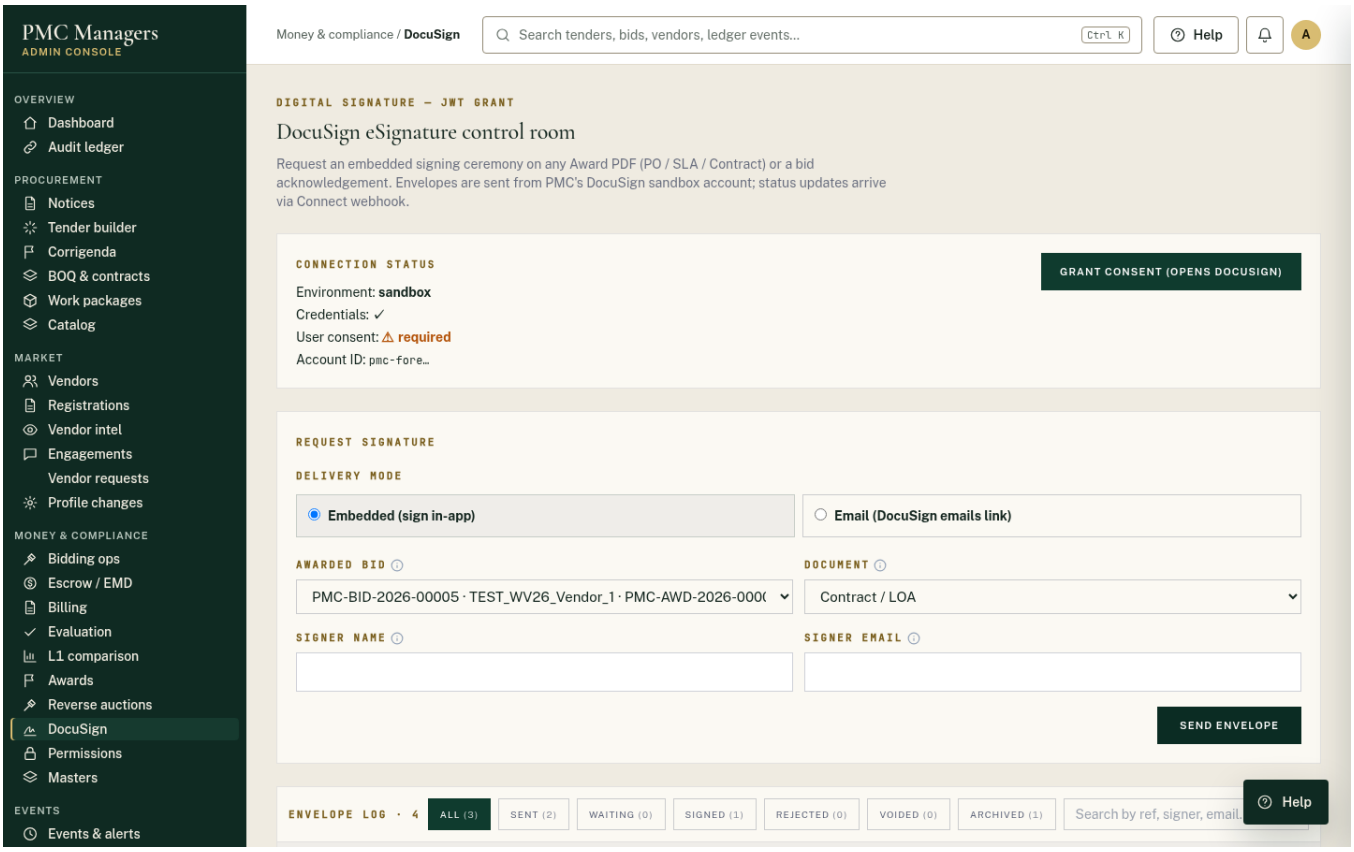

Figure: DocuSign operations · screenshot captured 05 Oct 2026 from the v51u build.

Roles & permissions

Role → permission matrix for every staff seed. New role? Define its scope here and it flows through to all admin panels on next sign-in.

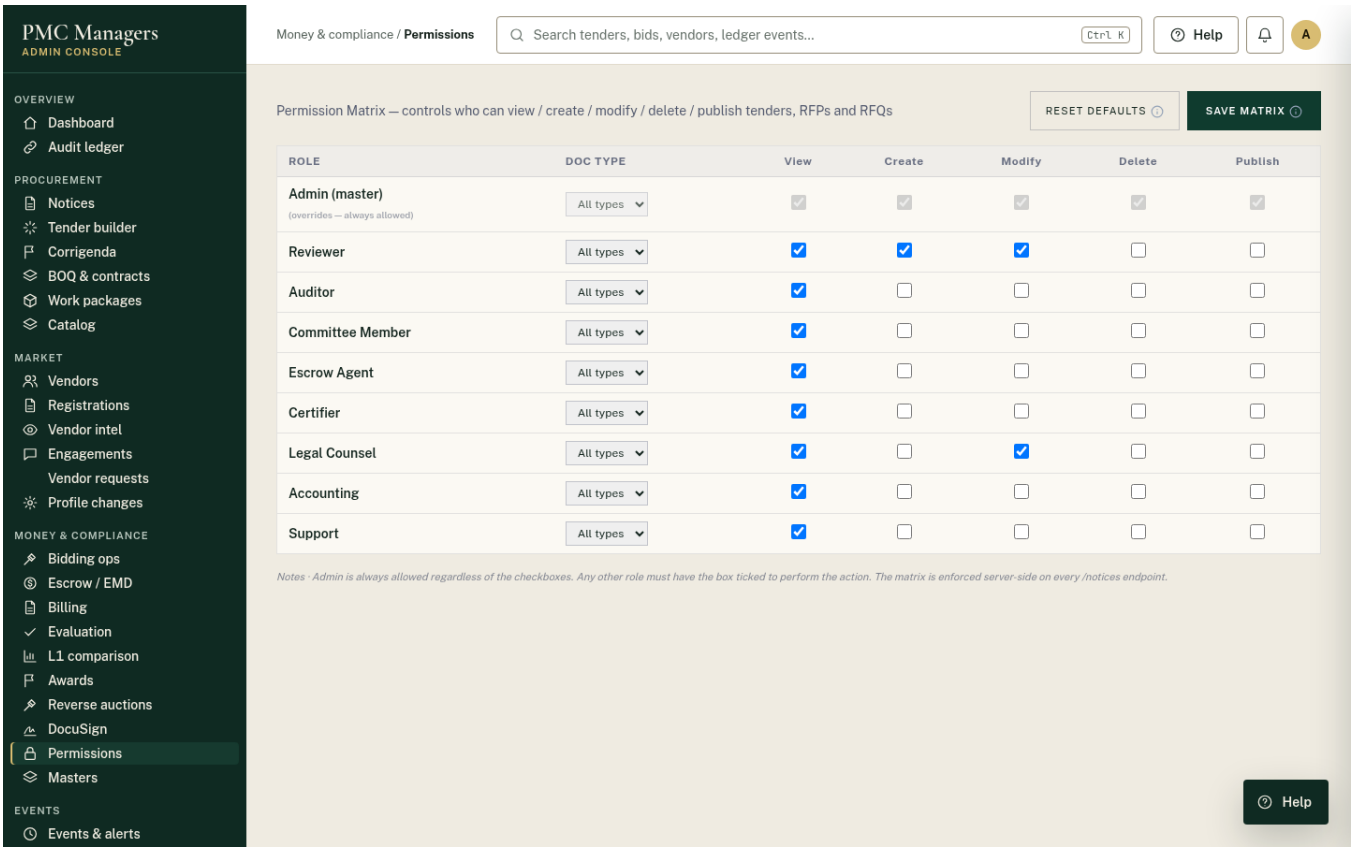

Figure: Roles & permissions · screenshot captured 05 Oct 2026 from the v51u build.

Events & alerts

System-wide events feed: deadlines approaching, EMDs expiring, KYC due. Admins pin or acknowledge events; vendors see their slice on the alerts tab.

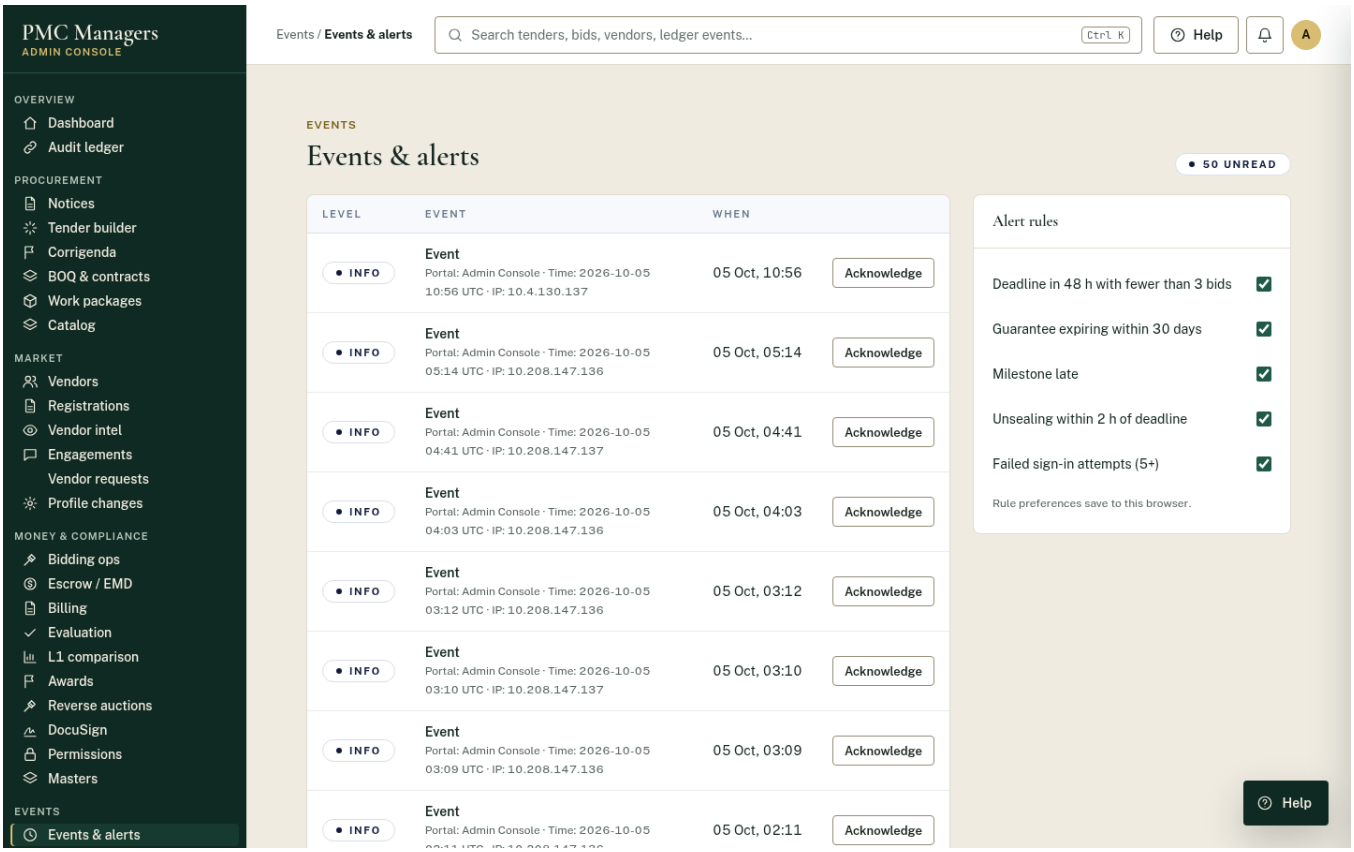

Figure: Events & alerts · screenshot captured 05 Oct 2026 from the v51u build.

Masters

Reference-data home. 13 chips (visible all at once on mobile): Staff, Companies, Tenants, Approval matrix, Hierarchy, Rating & Fees, Charge Fee, Categories, Legal entity types, Vendor requests, Profile changes, EMD rules, Investor demo. Active chip is solid navy.

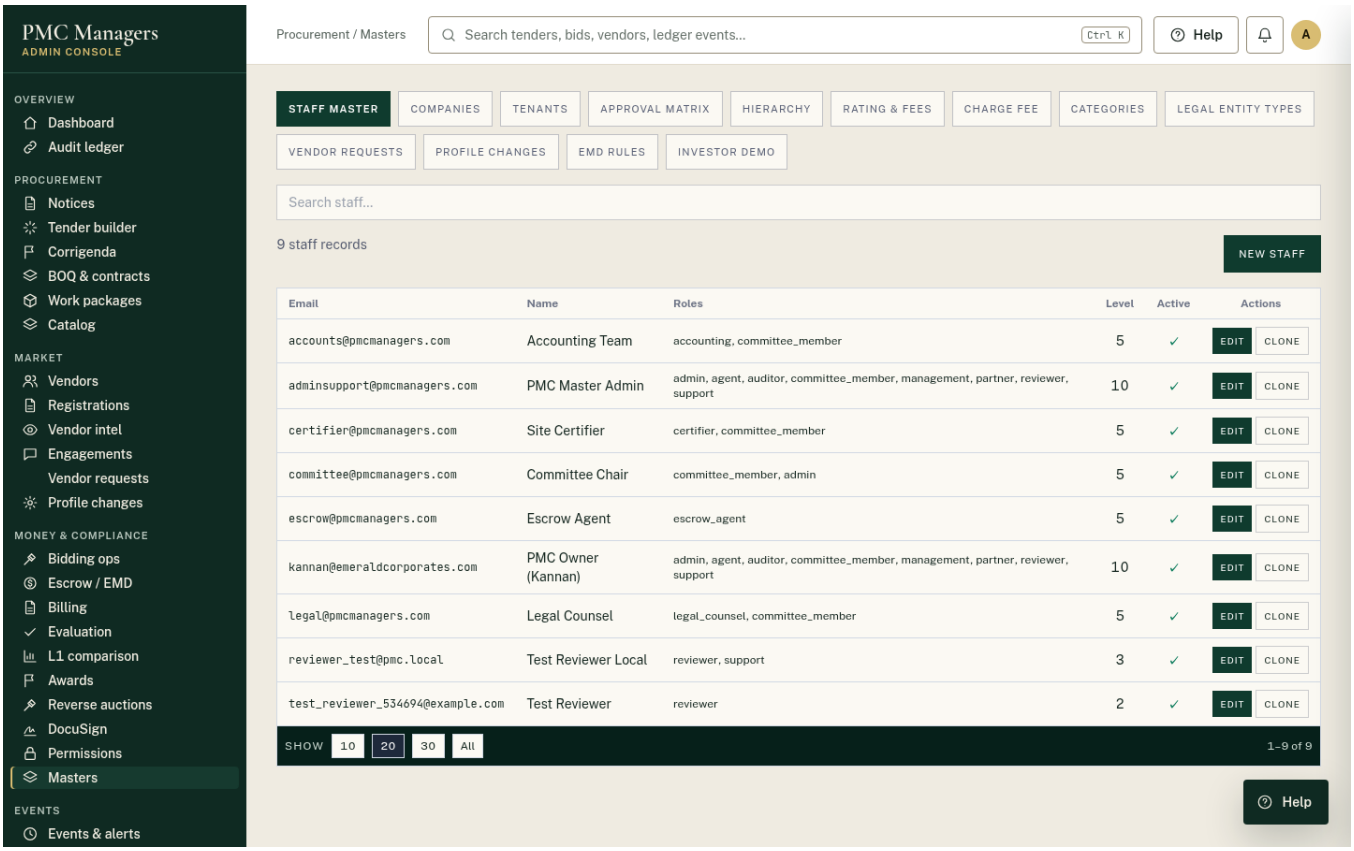

Figure: Masters · screenshot captured 05 Oct 2026 from the v51u build.

Audit ledger

Immutable action trail — every admin + vendor action with actor, IP, user agent and before/after diffs. Export CSV for compliance reviews.

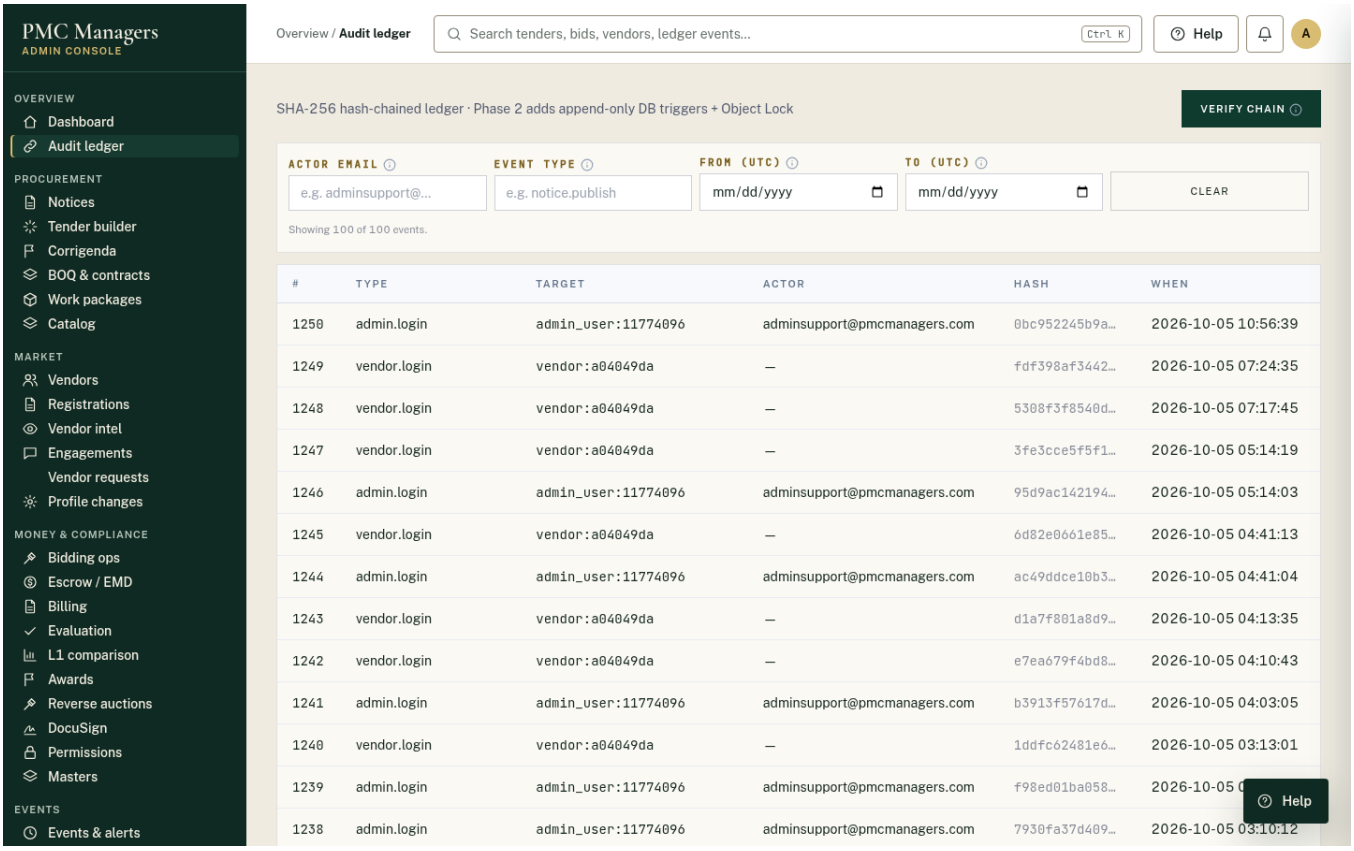

Figure: Audit ledger · screenshot captured 05 Oct 2026 from the v51u build.

Chapter 3 — Supplier portal

Supplier home

Supplier dashboard with next action tiles: KYC / Bids due / Awards to accept / Unread alerts. The mobile bottom tab-bar carries Home · Tenders · My Bids · Sign · Account.

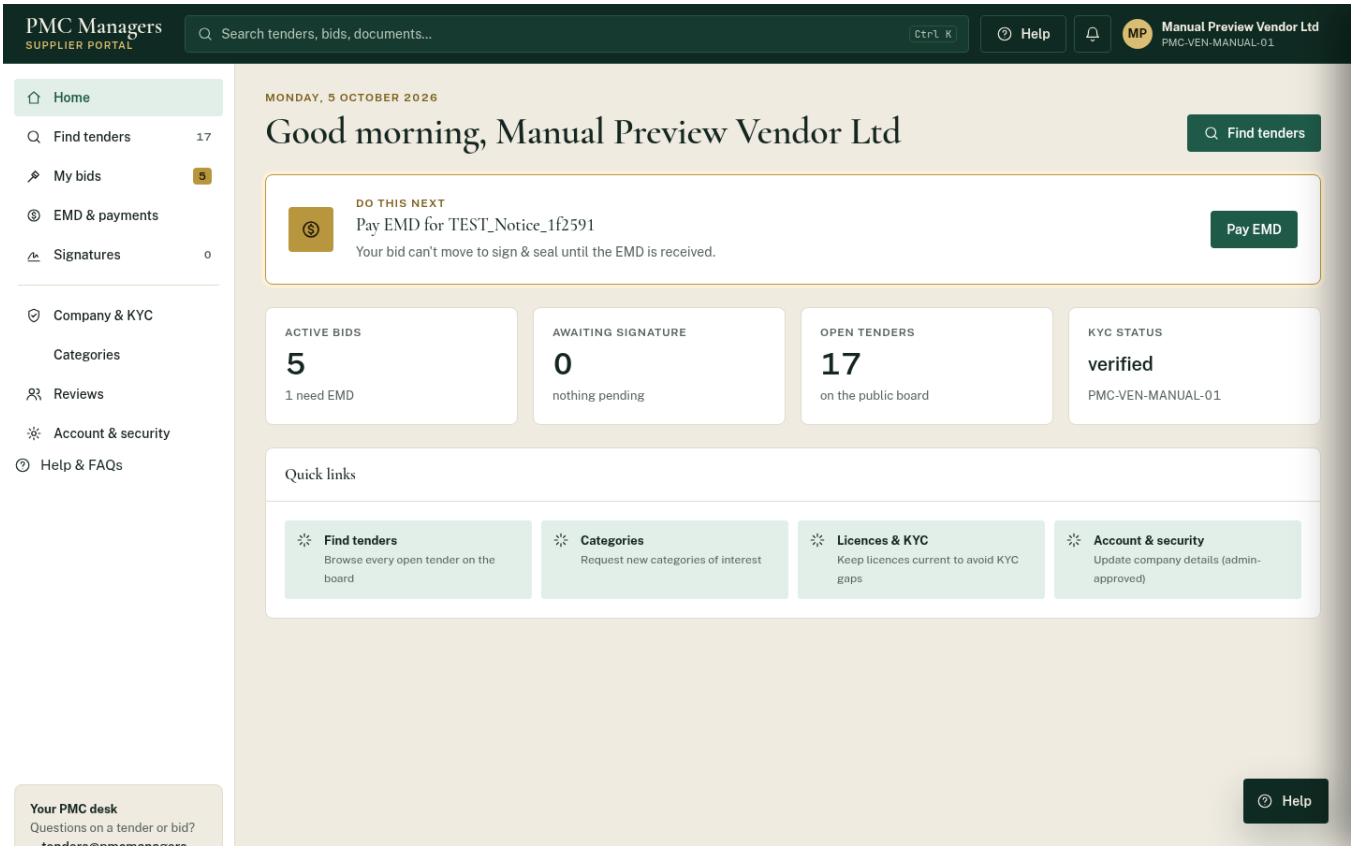

Figure: Supplier home · screenshot captured 05 Oct 2026 from the v51u build.

Find tenders

Supplier-side live tender list with the same filters as the public board — plus personalized sort (category match, past-win proximity). 'Start bid' from any row opens the bid workspace.

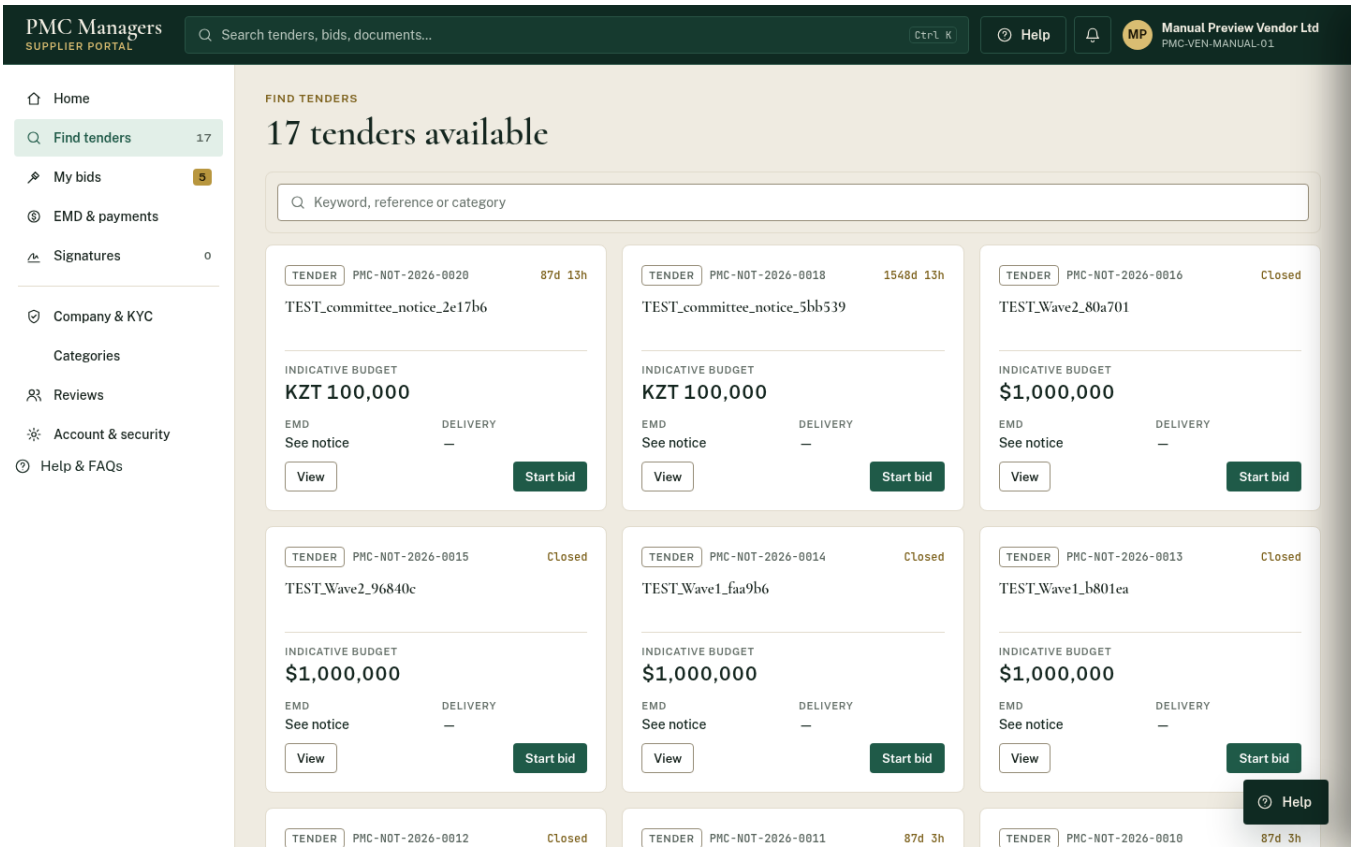

Figure: Find tenders · screenshot captured 05 Oct 2026 from the v51u build.

My Bids

Supplier's bid pipeline — drafts, submitted, awarded, declined. Each row carries EMD status and the next step the supplier owes.

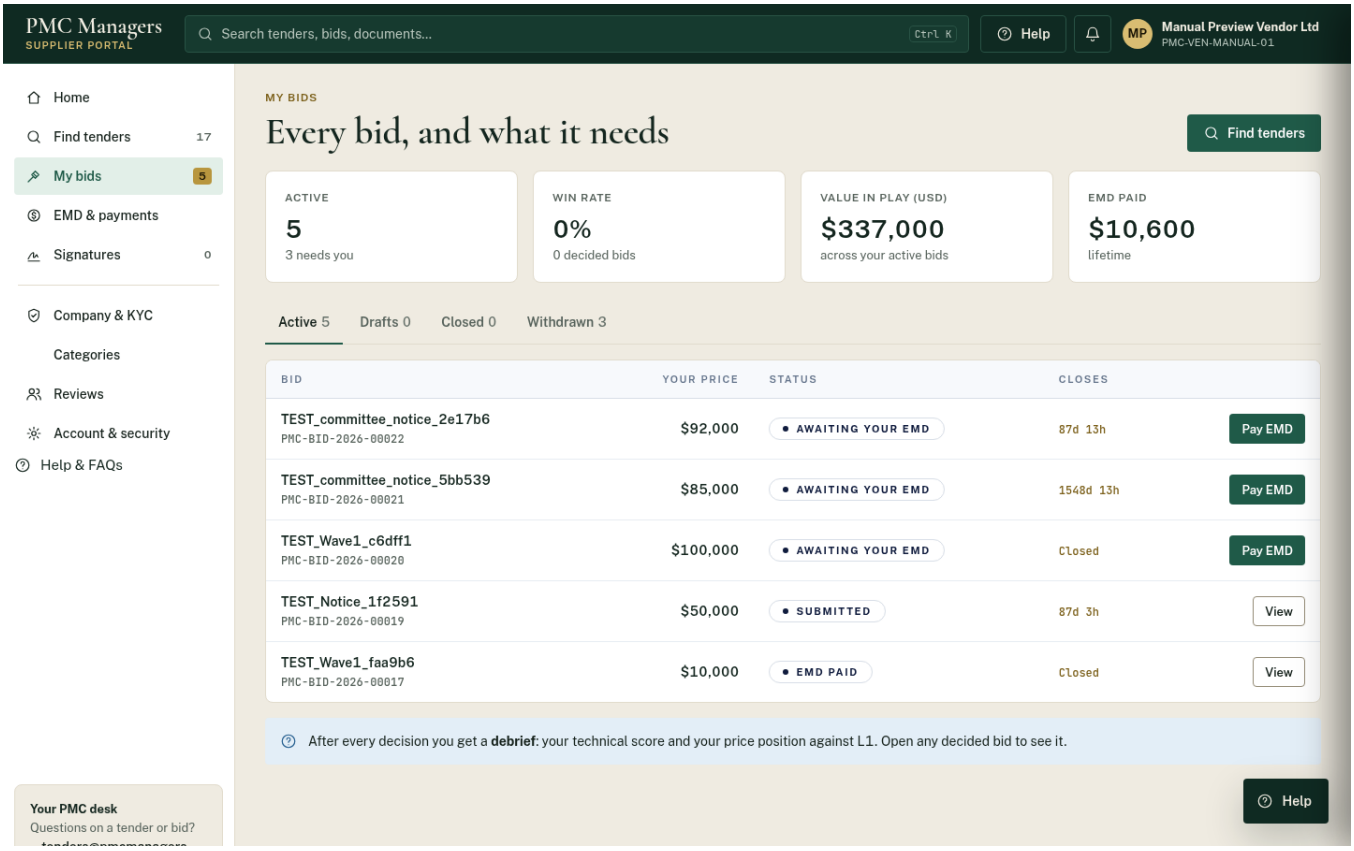

Figure: My Bids · screenshot captured 05 Oct 2026 from the v51u build.

Signatures (DocuSign)

Supplier-side DocuSign tray. Open an envelope, sign in-portal, download the signed PDF. The dot on the Sign icon in the bottom bar flags pending envelopes.

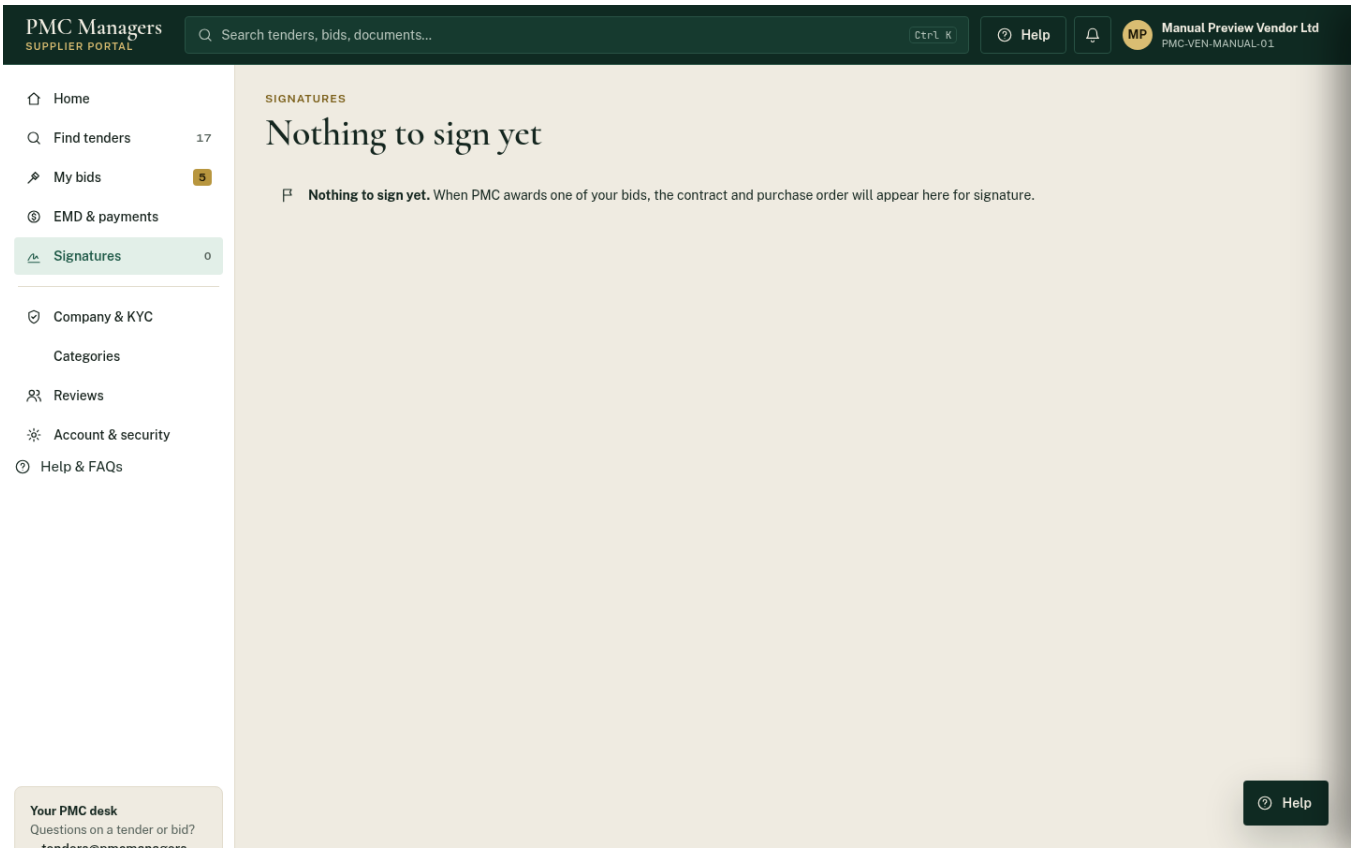

Figure: Signatures (DocuSign) · screenshot captured 05 Oct 2026 from the v51u build.

Company & KYC

Supplier's company profile — licences, incorporation docs, operating regions. Add a licence from here; the Cancel button no longer crashes (v51u scrim-scrub fix).

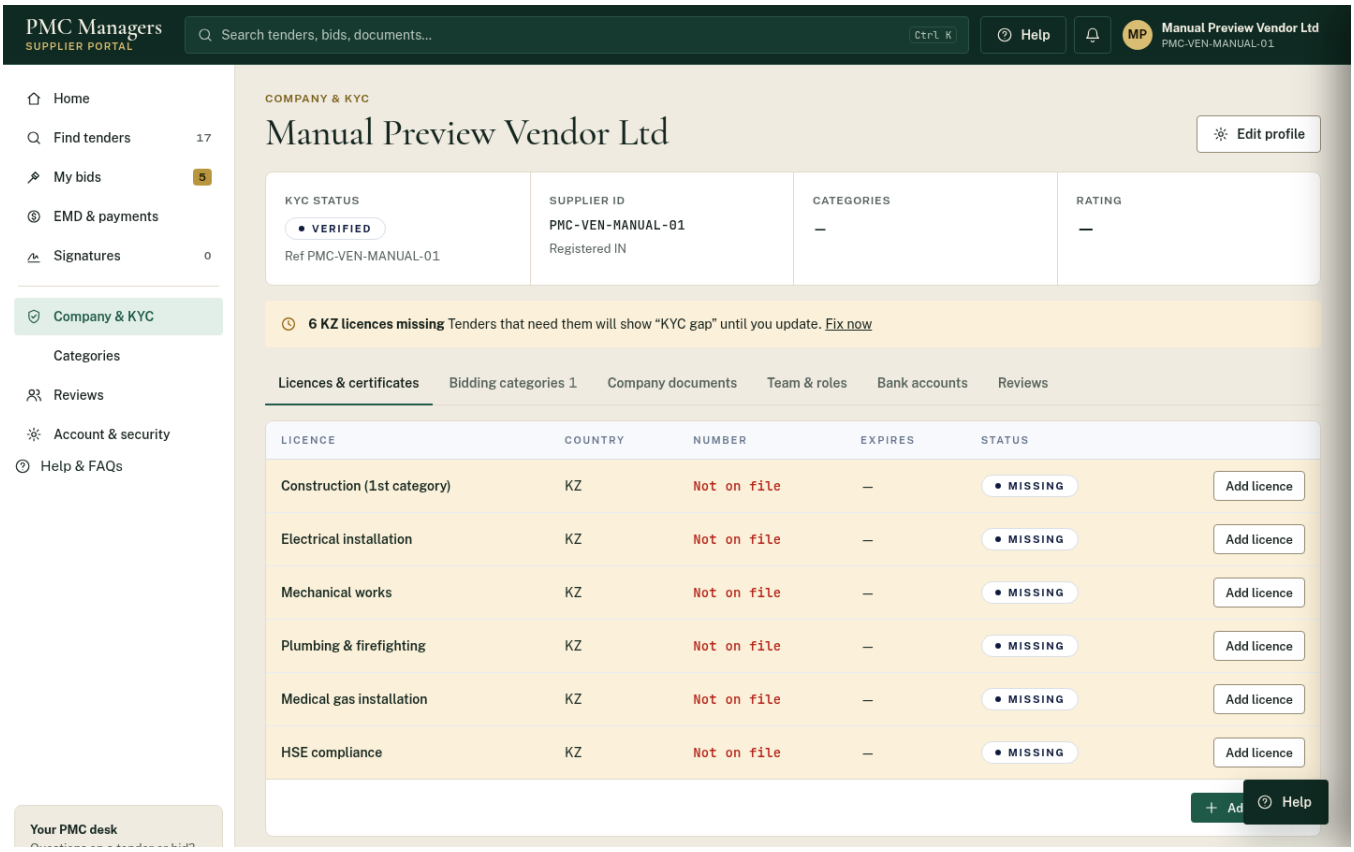

Figure: Company & KYC · screenshot captured 05 Oct 2026 from the v51u build.

Account & security

Password + session controls + change requests. Change company name attaches the incorporation certificate (required). Change mobile sends a confirmation link to the current email before admin can approve.

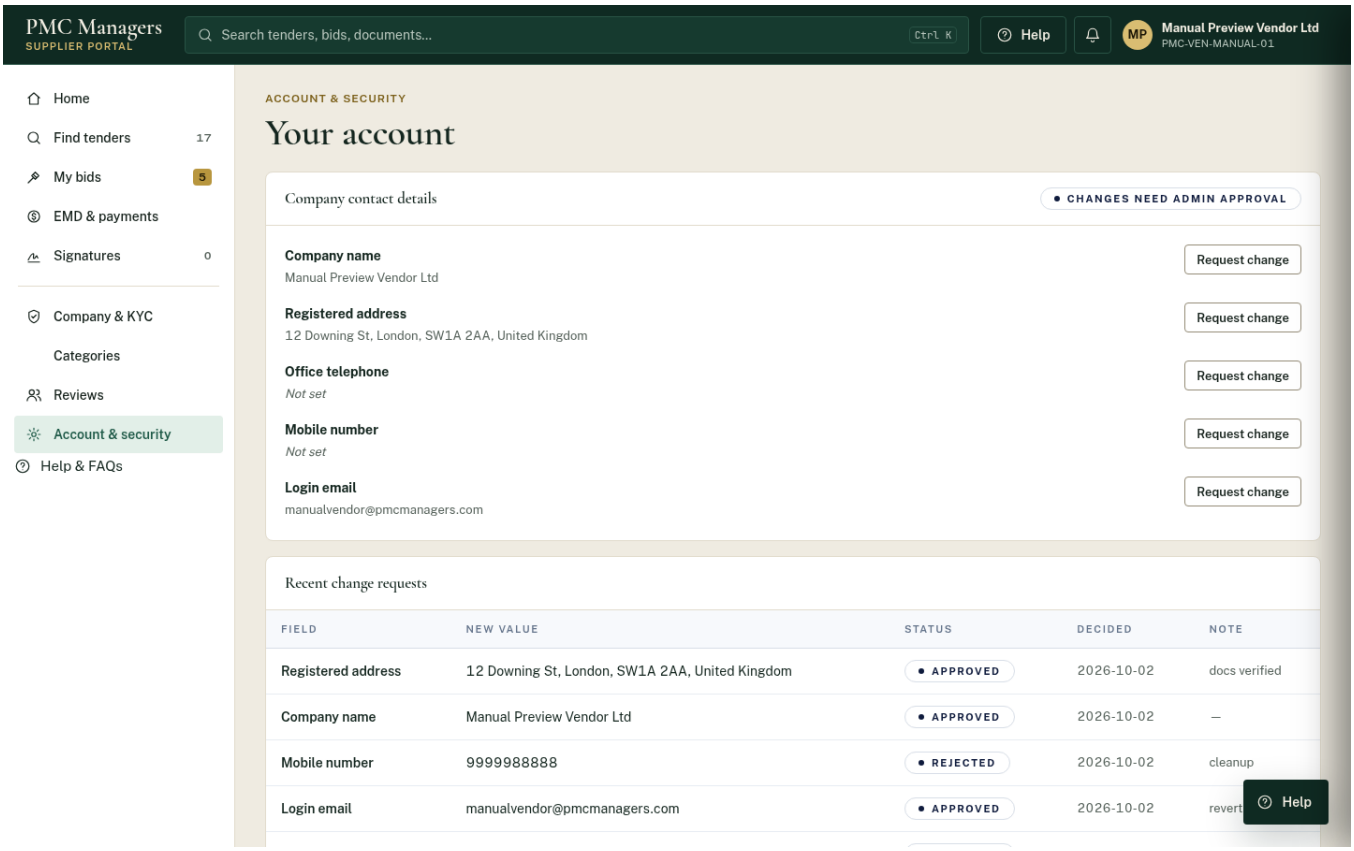

Figure: Account & security · screenshot captured 05 Oct 2026 from the v51u build.

Alerts

Supplier's inbox for system events — tender awards, DocuSign ready-to-sign, EMD refund processed, profile change decisions.

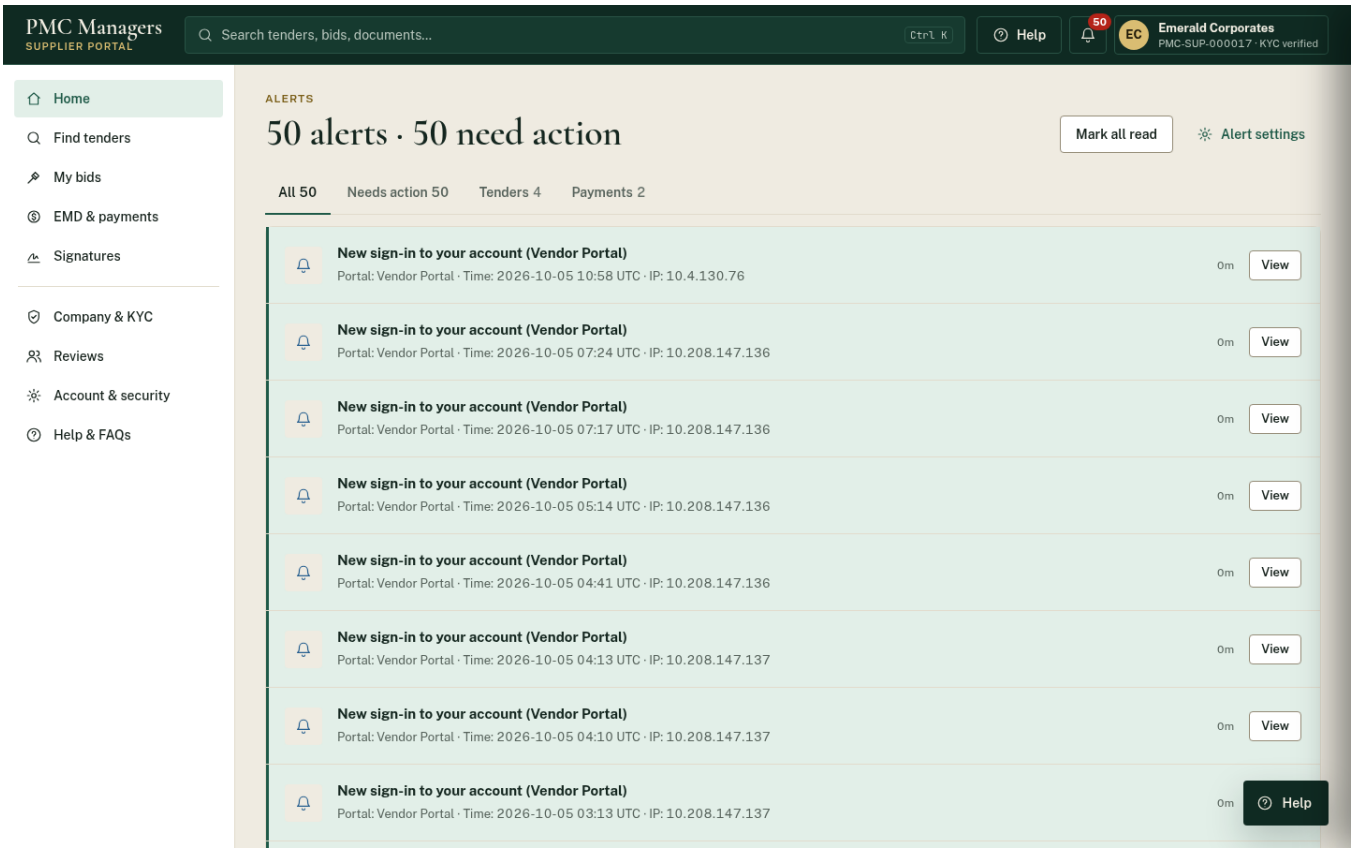

Figure: Alerts · screenshot captured 05 Oct 2026 from the v51u build.

Chapter 4 — Mobile experience

Mobile — Supplier home

iPhone-width view of the supplier dashboard. 5-icon bottom tab bar (Home · Tenders · My Bids · Sign · Account) is pinned above the OS home indicator.

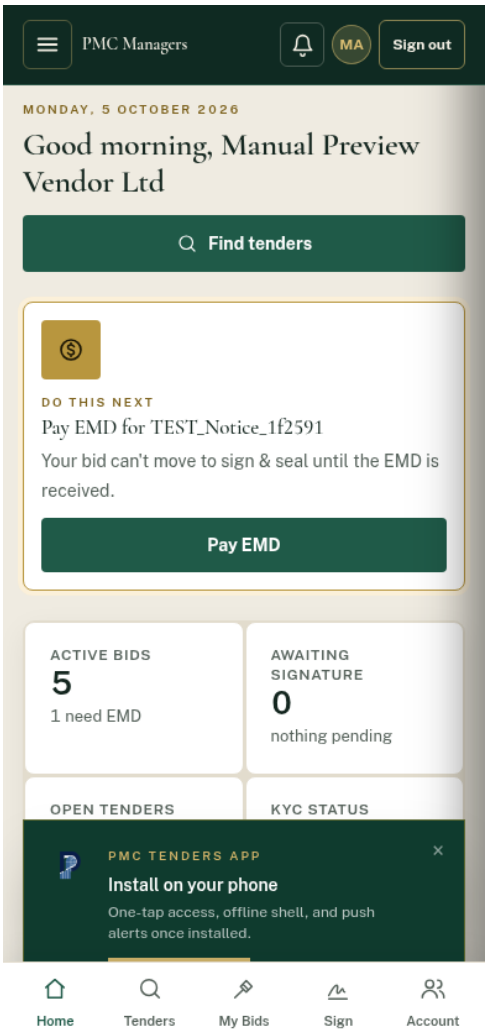

Figure: Mobile — Supplier home · screenshot captured 05 Oct 2026 from the v51u build.

Mobile — My Bids

iPhone-width view of the bid pipeline. Row cards stack vertically; tapping the pay button on an EMD-due bid no longer gets hidden by the tab bar (v51r pb-40 fix).

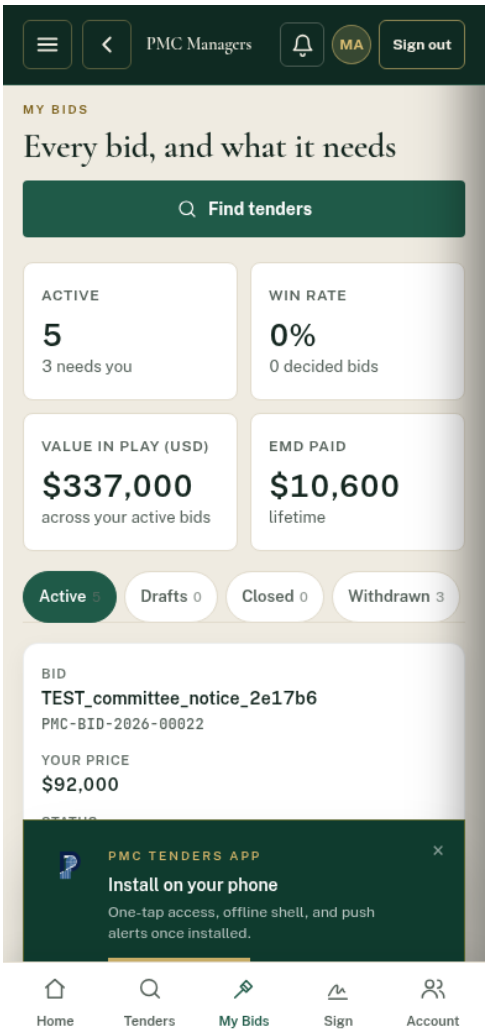

Figure: Mobile — My Bids · screenshot captured 05 Oct 2026 from the v51u build.

Mobile — Bidding operations

iPhone-width Bidding Ops. Tabs wrap to two rows and the count badges match the rows actually visible (v51o fix).

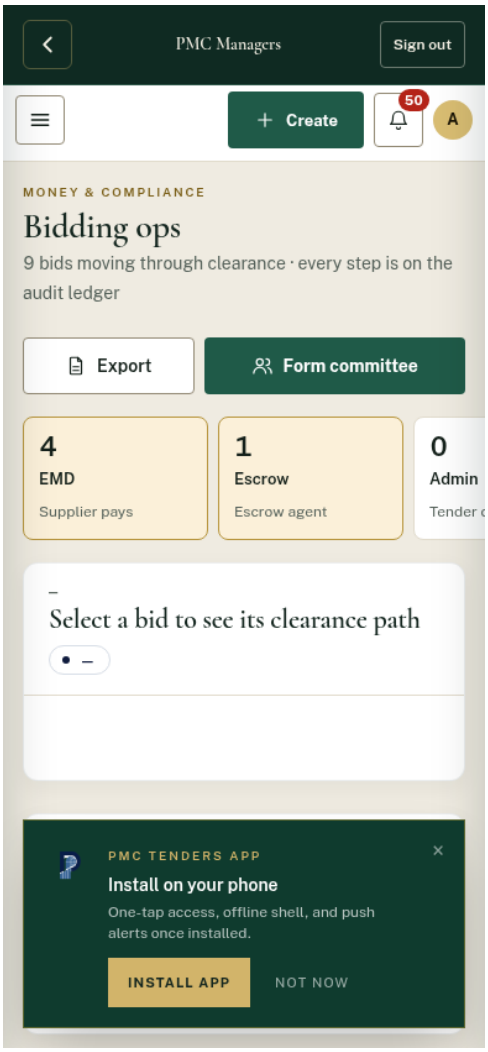

Figure: Mobile — Bidding operations · screenshot captured 05 Oct 2026 from the v51u build.

Mobile — Admin Vendors

iPhone-width Admin Vendors. Toolbar wraps 2-up, tapping a vendor opens KPI + KYC detail inline directly below the row.

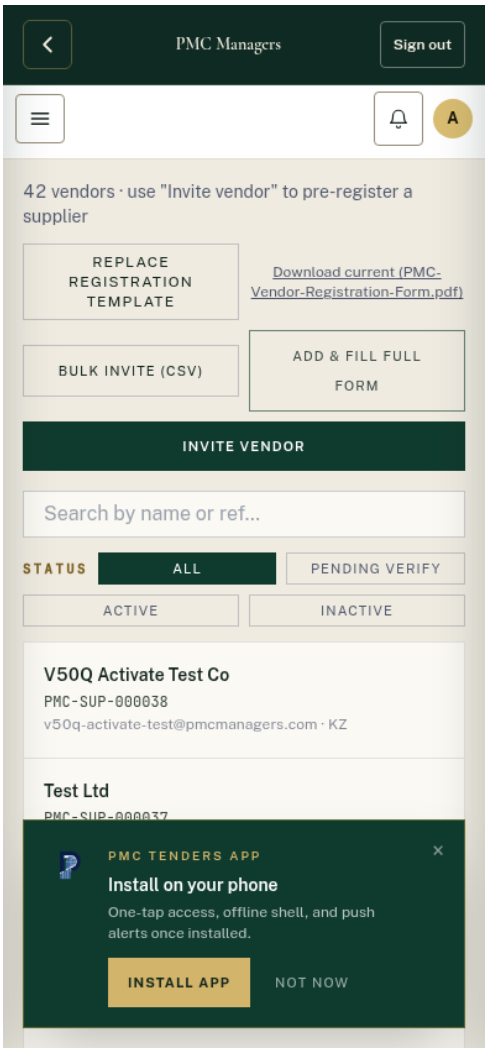

Figure: Mobile — Admin Vendors · screenshot captured 05 Oct 2026 from the v51u build.
