Document rev. 07 Oct 2026

Strictly private and confidential · for the exclusive use of the recipient.

PMC Managers is a full-stack procurement operating system that gives buyers, suppliers and auditors one trusted place to run tenders — from notice to award to escrow release — with every click on the audit ledger.

Who we are

THE PMC MANAGERS LTD (UK, Co. No. 17031540) operates PMC Managers — a cloud-native procurement platform that replaces fragmented email, spreadsheet and PDF-based tendering with a single auditable workflow. The platform is live, with vendor registrations, tender notices, bid submissions, EMD escrow, reverse auctions, DocuSign-based award signing and multi-role approvals all operating end-to-end.

What we solve

Global public and private procurement runs on brittle processes: PDF RFPs mailed around, EMDs lost in bank reconciliations, bid comparison done on spreadsheets, and audit trails recreated after the fact. The result is a well-documented set of failures — unqualified vendors, price collusion, EMD float opacity, award disputes, and a procurement cycle that is 3–6× longer than it needs to be.

What we built

A unified portal with four role surfaces (public notice board, vendor portal, staff portal, admin console), each wired into a single event ledger. Every notice, bid, payment, decision and signature is captured immutably. The platform ships with a reverse-auction engine, joint-signature escrow accounts, AI tender drafting, document builder, sanctions/KYC checks, and a role-based approval matrix.

Why now

Three forces converge in 2026: (i) procurement digitisation mandates across OECD and emerging economies, (ii) demand for auditable supply chains after post-2024 compliance scandals, and (iii) buyers finally willing to pay SaaS prices for workflows historically bought as one-off IT projects. We are building the Shopify of regulated procurement — one platform, every tender, every geography.

The ask

We are raising across pre-seed, seed, Series A and strategic tracks concurrently. See the Investment Ask section for stage-appropriate tickets, use-of-funds, milestones and expected returns.

SECTION 01 · THE PROBLEM

Fragmentation

A single tender today touches 7–12 disconnected systems: email, bank wires, Excel comparison, DocuSign, PDF bid docs, physical lockers for sealed envelopes, WhatsApp with vendors, and an auditor spreadsheet built after the award.

Opacity

EMD and performance guarantees sit in idle accounts with no transparency to either side. Public buyers cannot prove compliance; private vendors cannot predict refunds. In our pilot buyer conversations, every single one had an open EMD dispute.

Trust gap

Collusion, bid rigging and favouritism are reputational time-bombs. There is no credible neutral platform where every action — a notice tweak, an envelope open, a bid rejection — is logged with the operator's identity and timestamp.

Cycle time

Comparable tenders close in 90–180 days in the current manual world. Benchmarks from digitised peers (BrazilCompras, SF City Hall) suggest 40–60 days is achievable with the right workflow. That compression alone is tens of millions of USD saved per large buyer per year.

Compliance drift

Approval matrices live in HR policies and spreadsheets, not systems. When auditors arrive, teams reconstruct who-approved-what from email threads. Every quarter one tender fails this test — and the next procurement officer bears the blame.

SECTION 02 · THE SOLUTION

One platform, four portals

Public notice board for citizens and bidders. Vendor portal for registration, bidding and tracking. Staff portal for Legal, Escrow, Certifier, Accounting, Committee. Admin console for the procurement team. All reading from the same event log.

The audit ledger is the product

Every state transition — notice drafted, published, bid submitted, EMD paid, envelope opened, award signed — writes to an immutable ledger with user id, role, timestamp, IP, and before/after diff. Exportable to auditors and regulators in one click.

Joint-signature escrow for EMDs

Instead of trusting a bank reconciliation after the fact, EMDs land in joint escrow accounts operated by a PMC officer and the escrow-institution officer. Both must sign every release. The ledger makes disputes a 60-second investigation, not a 60-day one.

Reverse auctions, built in

Live descending-price auctions with anti-sniping, floor prices and role-based observer seats. Admins invite bidders by email with unique join tokens; vendors register in two clicks; the auction closes when the floor is met or the clock runs out.

AI where it matters

AI drafts tender notices from a brief, extracts BOQs from supplier quotes, screens bids against the spec, and highlights anomalies (e.g. a price 1.5× the budget estimate). Humans decide; AI removes the drudgery.

Rights are a first-class citizen

A role-based permissions matrix governs every screen. Vendors see their own bids; committee members see sealed envelopes only after the deadline; auditors read the ledger but cannot write to it. Multi-tenant from day one — each buyer gets a logical slice of the platform.

SECTION 03 · PRODUCT

Notice Board
Public, mobile-first, SEO-indexed listing of every tender. Filter by category, country, buyer, deadline. Downloadable PDFs and machine-readable JSON feeds for aggregators.

Vendor Portal
Five-section registration (Identity, Contact, Banking, Business Profile, Declarations) with document upload, KYC check and tenant-scoped admin approval. Bid tracker, My Bids, EMD history, Award letters, DocuSign signing in-portal.

Tender Builder
AI-assisted draft of the full tender dossier — scope, BOQ, eligibility, EMD rules, approval matrix. Templates library. Corrigendum workflow with mandatory audit trail.

Bidding Ops
Live pipeline of every bid moving through EMD → Escrow → Admin approval → Certifier → Legal → Accounting → Committee. Bulk EMD reminders, hold / resume, flag to certifier.

Escrow & EMD
Joint escrow accounts with dual-signature releases. Inbound-receipt ledger, mandatory countersign on every withdrawal, printable statements for auditors.

Reverse Auctions
Admin configures starting price, floor, duration, bid decrement. Invites vendors by email with unique join tokens. Live countdown, anti-sniping extension, winner-takes-all or shortlist modes.

Awards & DocuSign
L1 comparison engine, award recommendation, Letter-of-Intent and contract generation, DocuSign envelope orchestration end-to-end. Awarded vendor sees the contract in their portal.

Reports & Audit
Role-scoped dashboards, exportable audit ledger (CSV, JSON, PDF), SLA compliance reports, EMD float snapshots, vendor performance scorecards.

Masters & Governance
Approval matrices, legal-entity types, categories, countries, currencies, document templates — all editable without redeploying.

SECTION 04 · MARKET

TAM

Global B2G and large-enterprise procurement spend is approximately USD 13 trillion annually. Procurement software spend is approximately USD 9 billion annually and growing at approximately 11% CAGR. [Sources: McKinsey, Gartner, EBRD; final figures to be verified by PMC's analyst].

SAM

Mid-size public buyers and large enterprises running >50 tenders a year across emerging markets, EU and ANZ — approximately USD 1.6 billion of annual procurement-SaaS budget addressable in the next five years.

SOM (Year 1–3)

Kazakhstan and 4 adjacent CIS/MENA markets with 300+ qualifying buyers, a landed-average contract value of USD 36K/year — a beachhead of USD 10M+ ARR achievable at ~25% penetration.

Market timing

Public-procurement digitisation mandates are in force in 60+ countries (UN SDG 16.6 reporting). Enterprises are post-ERP: they have SAP/Oracle for finance but no system of record for tenders. Audit regulators are now rejecting PDF-and-email evidence.

SECTION

05 · BUSINESS MODEL

Platform subscription

Buyer SaaS seats, billed annually. Tiered by number of concurrent tenders, users and modules enabled.

Transaction fees

Fixed percentage on EMD transit (payable by the vendor, included in bid price) and on award value above a threshold.

Escrow float

Interest on the pooled EMD held in joint accounts (regulated, jurisdiction-dependent; disclosed up-front in Terms).

Vendor premium

Verified-vendor badge, auto-matched tender alerts, priority support — SaaS billed to vendors who derive measurable value from the matching.

Professional services

Buyer onboarding, bespoke approval-matrix setup, auditor training. Capped at approximately 15% of total revenue so SaaS economics stay dominant.

Compliance exports

White-labelled regulator feeds (court-admissible ledger extracts) sold on API usage to oversight bodies.

SECTION 06 · MOAT

Audit ledger as single source of truth

Not a feature — the architectural core. Competitors retrofit logs onto CRUD apps; our write path is log-first. Switching cost for a buyer who has run 200 tenders through our ledger is enormous.

Multi-tenant from day one

Every record carries a tenant_id. Buyers never share rows. Lets us land one tender authority and expand across its departments without re-architecting.

Role matrix × approval matrix

Six staff roles × bid pipeline × approval rules = a combinatorial space most procurement products never fully model. We have.

Document rendering pipeline

WeasyPrint + reportlab + DocuSign — same stack produces the public notice PDF, the LoA, the escrow statement, and the audit export. One rendering layer, dozens of document types.

Live reverse-auction engine

Non-trivial engineering — anti-sniping, dual-side timers, integrity under tab close. A fast-follower would need 6+ months of game-day hardening to catch up.

Regulated-escrow design

Joint-signature account model is bank-friendly and auditor-friendly. We can plug into local banks per market without becoming a payment institution ourselves.

SECTION

07 · TRACTION

- Platform live end-to-end: notice drafting → publication → bid intake → EMD escrow → award → DocuSign signing — all in production.
- 4 role surfaces (Public / Vendor / Staff / Admin) and 20+ admin console modules shipped.
- Reverse-auction engine shipped, with vendor invites via Resend, live rooms, aliased bidding, and anti-sniping.
- Audit ledger covers every state transition across notices, bids, approvals, escrow signatures, awards and user admin events.
- AI tender drafting + document extraction integrated via Emergent LLM gateway (model-portable: Claude Sonnet, Gemini, GPT families).
- Multi-tenant architecture live; every record is tenant-scoped.
- Deployment pipeline: S3 + CloudFront frontend, Elastic Beanstalk backend, MongoDB Atlas — zero-downtime releases shipping on a ~weekly cadence.
- Operational for user adminsupport@pmcmanagers.com and pilot vendors on the live www.pmcmanagers.com environment.

SECTION 08 · ROADMAP

Next 90 days

First 3 paying buyers in Kazakhstan. Mobile vendor app. Direct bank-API escrow (Halyk, Sberbank-KZ). Published public notice-board SEO.

Months 4–9

Expand to UAE and Georgia. Add ESG & sustainability scoring module. Second-generation reverse auction (sealed-bid + price-only variants). SOC2 Type I.

Months 10–18

EU / UK expansion with GDPR-DPIA pack and ISO 27001. White-label offering for tender authorities. Vendor-financing marketplace with regulated partners.

Months 19–36

LATAM beachhead (Brazil / Mexico). Procurement data product (aggregated, anonymised market-price index). Reach USD 10M ARR.

SECTION 09 · TEAM

Legal entity
THE PMC MANAGERS LTD · Company No. 17031540 · Incorporated 13 February 2026 under the Companies Act 2006.

Registered office
Office Gold, Building 7, Floor 5, Chiswick Park, 566 Chiswick High Road, London, United Kingdom, W4 5YG.

Jurisdiction & governance
English law; board governance per the Articles of Association. Investor rights documented in SHA on first priced round.

Founders & team
[TO BE FILLED] — founder bios, titles and 1–2 line backgrounds to be inserted on finalisation.

Advisors
[TO BE FILLED] — advisory board and specialist advisors.

Current headcount
[TO BE FILLED] — core team, engineering, GTM, operations.

SECTION

10 · THE ASK

Pre-seed / Angel

USD 250K – 750K · SAFE or priced convertible · Use of funds: first 3 enterprise buyers in Kazakhstan, mobile vendor app, Resend-based transactional email at scale, 2 GTM hires. Target milestones in 12 months: 10 buyers · USD 300K ARR · SOC2 readiness.

Seed

USD 1M – 3M · Priced round · Use of funds: 8-person engineering team, 3-person GTM, ISO 27001 and SOC2 Type I, direct-bank escrow partnerships in 3 markets, expansion to UAE and Georgia. Target milestones in 18 months: 40 buyers · USD 1.5M ARR · 500 verified vendors.

Series A

USD 3M – 10M · Preferred shares · Use of funds: multi-geography GTM, EU/UK regulated launch, white-label offering for tender authorities, data-product spin-up, 25-person team. Target milestones in 24 months: 120 buyers · USD 6M ARR · profitable unit economics at the contribution-margin level.

Strategic / corporate partner

Partnership + minority investment · For banks (escrow), accounting firms (audit distribution), ERP vendors (procurement module OEM) and government-tech integrators. Shape: equity + revenue-share on co-sold deployments.

SECTION 11 · FINANCIALS

Revenue model (3-year)
[TO BE FILLED] — Buyer SaaS seats, transaction fees, escrow float, vendor premium, services. Monthly cohort build.

Cost model
[TO BE FILLED] — Payroll, infra (AWS + MongoDB Atlas + Resend + DocuSign), compliance, GTM.

Unit economics
[TO BE FILLED] — CAC, Payback, ACV, LTV:CAC, Gross margin.

Cash runway
[TO BE FILLED] — Opening balance, burn, runway at each stage of the raise.

Projections
[TO BE FILLED] — Y1 ARR, Y2 ARR, Y3 ARR; Y3 EBITDA margin.

SECTION 12 · RISKS

Regulatory
Procurement laws vary by jurisdiction. Mitigation: launch in one jurisdiction fully licensed; expand with local counsel; escrow partners carry the regulated license.

Buyer sales cycle
Public buyers can take 9–12 months to procure a procurement system. Mitigation: pilot-to-paid conversion motion; private-enterprise buyers as faster-close counterweight.

Vendor adoption
Suppliers resist new portals. Mitigation: bulk CSV invite + pre-filled profile + no vendor-paid SaaS at entry (vendor premium is strictly opt-in).

Trust & security
A platform that writes to a legal-grade ledger must never lose data. Mitigation: append-only write path, daily snapshot to immutable storage, SOC2 roadmap, bug-bounty from day one.

Competition
SAP Ariba, Coupa, Jaggaer, local Govt-Tech incumbents. Mitigation: our verticalised depth (escrow + reverse auction + audit ledger) is deeper than horizontal procurement suites; our SMB price point is below theirs; our emerging-markets focus is where they are weakest.
